EL NIÑO ACTION BRIEFING · 30 OCTOBER 2026

Dioulassoba, Bobo-Dioulasso

The last El Niño hit here twice, with dengue in 2023 and killing heat in April 2024, and nobody counted the heat deaths. Bobo needs its own Red Cross heat trigger before the only one, written for Ouagadougou, expires on 31 December.

REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
Hauts-Bassins, now Guiriko (GADM BFA.9_1), region level	900 forecast Oct 2026 – Mar 2027, 360 of them in March; 79 already past (Jun–Sep)	6-month forecast, Oct 2026 – Mar 2027	Heat Feb–May, worst at night; meningitis Jan–May; dengue's tail in November; hot-season water cuts

29/29 recommendations checked. 13 confirmed, 14 corrected, 0 unverified, 2 contraindicated (9 actions, all corrected; 10 "Do not" cards: 6 confirmed, 2 corrected, 2 contraindicated; 10 For you steps: 7 confirmed, 3 corrected). Exposure figure: Climate Impact Lab El Niño Heat Mortality Tracker data, 26 October 2026, pre-peer-review, for Hauts-Bassins Region (now Guiriko), heat only; nothing published covers the quarter itself. The funding target moved −31% in verification (under a third), from XOF 130.8 million (US$222,800) to XOF 89.9 million (US$153,100), mostly because cash is suspended and that line became vouchers.

EXECUTIVE SUMMARY — AT A GLANCE

11.18°N 4.30°W, Burkina Faso · Natural Earth

- **The risk.** The last El Niño brought the 2023 dengue epidemic (228 deaths in the region) and the April 2024 heatwave, whose deaths nobody counted.
- **For you.** By the end of February, fit tight lids on every water container and keep three days' water covered before the hot-season cuts.
- **The money.** Floor XOF 29.4M, target 89.9M, ceiling 191.3M (US$50,000 / 153,100 / 325,800); a Bobo trigger for the Red Cross heat protocol buys the most.
- **Do not.** Do not copy Ouagadougou's 42.4 °C heat trigger: Bobo's April record is 42.0 °C, so it would never fire.

FOR YOU, AS A RESIDENT 10 STEPS

For a family in Dioulassoba, this winter stacks several seasons in the same clinics: dengue's tail in November, meningitis from January, Ramadan from about 8 February, and the hottest nights in March and April, when the taps run on rotation. The ranked actions below are written for the commune and its partners. These are the ones you can take yourself.

Fit tight lids on every water container, and keep three days' water covered before the hot-season cuts

PARTIALLY CONFIRMED FROM ACTION 6 AND "DO NOT" 5

BY WHEN	COST TO YOU	PROTECTS
lids by 31 January; water stored by the end of February 2027	lids, or cloth tied tight over the mouth (no Bobo container price was found)	drinking water, and the household from dengue mosquitoes

ONEA Bobo has said publicly that it switches to alternating distribution when demand outstrips production; in 2018 the dry-season deficit was 23,000 m³ a day. No rotation notice for 2024–26 was found, so plan for cuts without a timetable. Open jars and drums breed the *Aedes* mosquitoes that spread dengue, so the lid matters as much as the water.

Every week through December, empty, cover, or turn over standing water in the compound: jars, tyres, and pots

CONFIRMED FROM ACTION 7

BY WHEN	COST TO YOU	PROTECTS
weekly until 31 December 2026, and again from the first rains	XOF 0	everyone in the compound

Hauts-Bassins is where Burkina's 2023 dengue epidemic started, and it recorded 228 of the country's 709 deaths. The 2023 response leaned on community and Red Cross larval control, because the mosquitoes breed in water people store.

For any fever: paracetamol only, no aspirin or ibuprofen, and get tested at the CSPS or CMA

CONFIRMED FROM ACTION 7

BY WHEN	COST TO YOU	PROTECTS

* Suggested formulation: check with a health worker before sharing.

now until May 2027	the paracetamol; ask at the CSPS whether the test is free	anyone with a fever

WHO advises paracetamol for dengue fever and no anti-inflammatories such as aspirin or ibuprofen. In 2023 clinicians in Hauts-Bassins linked complicated and bleeding cases to late consultation and self-medication. Dengue tests were free in public facilities during the 2023 epidemic; whether they are free in 2026 is unconfirmed.*

Fever with a stiff neck, a rash, confusion, or a baby's bulging soft spot, January–May: go to the CSPS the same day

CONFIRMED FROM ACTION 3

BY WHEN	COST TO YOU	PROTECTS
January–May 2027	transport; care for children under five is free	children and young adults

These are the WHO signs of meningitis, and its season here runs from January to May. Burkina had 1,495 suspected cases and 64 deaths in the first half of 2026. MenAfriVac protects against group A only, so being vaccinated does not rule it out.*

Children under five: care at the CSPS is free, so take any child with diarrhoea there for ORS and zinc the same day

CONFIRMED FROM ACTION 3

BY WHEN	COST TO YOU	PROTECTS
now, and every hot-season day	free at the CSPS for children under five	young children

Free care for children under five and pregnant women (decree 2016-311) is still in force; the ministry reviewed it on 19 January 2026. ORS cuts diarrhoea deaths by about 69% and zinc by about 23% (Munos, Walker, and Black, 2010). This treats the diarrhoea deaths that rise in the hot season; it is not a heat treatment.*

Between December and the end of January, buy one 50 kg sack of maize and store it dry in a hermetic bag

PARTIALLY CONFIRMED FROM ACTION 8

BY WHEN	COST TO YOU	PROTECTS

* Suggested formulation: check with a health worker before sharing.

1 December 2026 – 31 January 2027	about XOF 8,000–9,000 (US$14–15), plus the bag (Bobo price not found)	food for February to May

The Guiriko maize price was XOF 15,732 (US$26.79) per 100 kg in March 2026 (INSD), and FEWS NET forecasts western grain prices 20–35% below the five-year average through January, so there is no gain in buying earlier. PICS-type hermetic bags come in 50 and 100 kg sizes; ask the agro-input shops near the Grand Marché. If you cannot spare the cash, the social-price sales from February may serve you better: bring your CNIB, or ask the Mairie about using a CONASUR card.

Ramadan, about 8 February – 9 March 2027: the sick are exempt; drink between iftar and suhoor; no midday work

CONFIRMED FROM ACTION 4

BY WHEN	COST TO YOU	PROTECTS
from about 8 February 2027, depending on the moon	fidya, for older people who pay it instead of fasting	older and sick people, and outdoor workers

Qur'an 2:184 exempts the sick, and people too frail to fast pay fidya. The fast lands on the rising heat curve, just before March's forecast peak. In April 2024, during Ramadan and power cuts, Gabriel Touré hospital in Bamako recorded 102 deaths in four days, about half of them people over 60; the cause was not established.

On hot nights, sleep in the shaded courtyard, wet the skin of older relatives, and do not rely on a fan above about 35 °C

CONFIRMED FROM "DO NOT" 3 AND 4

BY WHEN	COST TO YOU	PROTECTS
February–May 2027	XOF 0	older people and anyone sick

In April 2024 nights in Burkina stayed as warm as 32 °C, and mud-brick walls give the day's heat back at night. A 2024 trial in older adults at 36 °C found fans did not lower peak core temperature, and in dry heat a fan can warm the body. Wet the skin and let the air cool it; it works in a power cut too.*

Name one neighbour to check daily on any elder who sleeps alone; if you are displaced, get your CONASUR registration

* Suggested formulation: check with a health worker before sharing.

PARTIALLY CONFIRMED | FROM ACTION 5

BY WHEN	COST TO YOU	PROTECTS
agreed by 31 January 2027; checks February–May	XOF 0	people who would die unseen indoors

Heat kills people alone in closed rooms at night, where nobody sees it. Among displaced households surveyed in Bobo in 2022, only about 24% were registered on arrival, and registration is what opens the social-price sales and most help.

Watch the weekly heat-health bulletin and the ANAM forecasts on the radio, and volunteer with the Croix-Rouge by 15 December

CONFIRMED | ROLE-SPECIFIC

BY WHEN	COST TO YOU	PROTECTS
volunteer by 15 December 2026; bulletins weekly	XOF 0	your quarter

The government publishes a weekly *Bulletin climat-santé* with heat-health vigilance levels at matd.gov.bf, and the press relays ANAM heat forecasts. Register at volontariat.croix-rouge.bf (online sign-up, basic training, then provincial validation; the platform says it will be relaunched soon), or call the Croix-Rouge Burkinabè headquarters on +226 25 36 13 40. No heat hotline exists.

What to ask of the people in charge

- Ask the Croix-Rouge Burkinabè: "Will Bobo get its own trigger in the renewed heat protocol before 31 December?" (action 1).
- Ask the DRS Guiriko: "Will our CSPS have ceftriaxone, ORS and zinc, and dengue tests by mid-December?" (action 3).
- Ask ONEA: "When will the hot-season rotation for Secteur 1 be published, and which standpipes stay on?" (action 6).
- Ask the Mairie and SONAGESS: "Will the social-price sales accept a CONASUR card or a quarter chief's attestation, and will Bobo get its own earmark from the harvest purchase?" (action 8).

* Suggested formulation: check with a health worker before sharing.

WHAT THIS PLACE SHOULD DO RANKED

Ranked by expected lives saved per unit of effort before the peak. Backing lenses are shown per action; an action several lenses reached independently is the stronger bet.

1. Write a Bobo trigger into the Red Cross heat protocol before it expires on 31 December 2026

PARTIALLY CONFIRMED | ECONOMIST · PHILANTHROPIST · SKEPTIC | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
Croix-Rouge Burkinabè (CRBF), with ANAM and the IFRC (DREF Anticipatory Pillar)	amendment agreed before 31 December 2026	amendment: staff time; operations for 10,000 people: XOF 31.3 million (US$53,200)	a March–April peak with no money that moves on a forecast	IFRC DREF and the Commune; trigger: a Bobo ANAM forecast threshold, to be set

Burkina's only heat protocol, sEAP2024BF01 / MDRBF020, was approved on 3 December 2024 for two years, and IFRC GO lists its end date as 31 December 2026. It is fully funded at CHF 219,935 (about XOF 156 million, US$266,000) for 50,000 people in **Ouagadougou only**. It fires when ANAM forecasts a maximum of 42.4 °C or more for at least three days, four days ahead: the 90th percentile of Ouagadougou's hottest month. That threshold would almost never fire here. Bobo's station (WMO 65510) has a 1991–2020 mean April maximum of 37.4 °C (March 37.8 °C) and an April record of 42.0 °C. So the renewal must carry a threshold set on Bobo's own percentile, and include the night-time minimum, which was what killed in 2024. The commune can co-finance: its 2026 budget is XOF 7.31 billion (US$12.5 million), and a 0.5% line in the 2027 budget, XOF 36.6 million (US$62,300), could be released on the same trigger.

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: the end date is 31 December 2026, not about 3 December. No public renewal or Bobo extension was found. The Bobo climate figures come from a secondary table citing WMO normals and DWD; ANAM's own station data were not obtained. The cost uses the protocol's CHF 4.40 (XOF 3,126, US$5.32) a head, which is its total divided by its headline reach, not a unit cost; its direct services are much smaller (1,200 food kits, 500 home visits, and 50 referrals). The protocol has never been evaluated.

2. Count heat deaths in Bobo every day from 1 February 2027

PARTIALLY CONFIRMED | EMERGENCY MANAGER · SKEPTIC · HISTORIAN | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
DRS Guiriko (Hauts-Bassins), with the CHU Sourô Sanou emergency department and morgue, CMA Dô, and municipal burial records	**daily from 1 February 2027**	**about XOF 0: a tally sheet and existing staff**	**a peak that passes unseen, and actions nobody can judge**	**no payer needed; trigger: the date**

Nobody counts heat deaths in Bobo. The only Burkina signal in 2024 was about four people a day arriving dead at Yalgado Ouédraogo hospital in Ouagadougou, from mid-March to mid-April. That was an average given by Red Cross Climate Centre scientist Kiswendsida Guigma (*Daily Maverick*, 22 April 2024), not an official count. The heat protocol cites 67 deaths at CHU Bogodogo in a March heatwave, from national television. A daily count gives action 1's trigger an outcome to check against, and without it every intervention this winter can call itself a success.

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: Burkina has no routine heat-mortality surveillance; none was found. The count is feasible through the DRS but has no precedent here.

3. Stock the clinics before January for meningitis, hot-season diarrhoea, and dengue's tail

PARTIALLY CONFIRMED | PUBLIC HEALTH · EMERGENCY MANAGER · HISTORIAN · PHILANTHROPIST | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
DRS Guiriko and the District sanitaire de Dô, with CHU Sourô Sanou, CMA Dô, and the Secteur 1 CSPS	stocked by 15 December 2026; weekly reporting from January	XOF 17.6 million (US$30,000), an unverified estimate	deaths in the weeks before reactive vaccine arrives, and diarrhoea deaths in the heat	donor grant through the DRS; WHO meningitis alert and epidemic thresholds

Stock ceftriaxone, lumbar-puncture kits, meningitis rapid tests, ORS and zinc, IV fluids, and dengue rapid tests. Report weekly, including zero reports, against the WHO alert and epidemic thresholds, and request reactive vaccine through the International Coordinating Group (ICG): Burkina did so in the 2026 season, so the route is live. That season (WHO bulletin, weeks 1–26) had 1,495 suspected cases and 64 deaths (4.3% fatality), with 4 districts on alert and none in epidemic. MenAfriVac, given to 10.8 million people in about 10 days in December 2010, cut serogroup A risk by 99.8% (Novak et al., *Lancet Infectious Diseases* 2012), but serogroups C, W, and X and pneumococcus remain. ORS cuts diarrhoea deaths by about 69% and zinc by about 23% (Munos, Walker, and Black, *International Journal of Epidemiology* 2010). Care for children under five is free (decree 2016-311, still in force).

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: Men5CV introduction is **planned** (the ministry was preparing a Gavi request in December 2024); no evidence was found that it has been introduced or that a campaign has run. ORS and zinc treat the diarrhoea deaths that rise in the hot season; this is not a heat intervention. In Nouna (Diboulo et al. 2012, rural, about 150 km north), heat had a strong short-term effect on under-five mortality, which is rural evidence applied to a city core. Unit costs are unpublished.

4. Get a Ramadan heat message out through the grand imam and the griots before about 8 February

PARTIALLY CONFIRMED | FRONTLINE · PUBLIC HEALTH · SKEPTIC | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
DRS Guiriko, with the Dioulassoba mosque, the Muslim community's associations, the griots, and community radio	**before about 8 February 2027; radio December–May**	**radio spots about XOF 500,000 (US$850), unverified**	**fasting older and sick people dehydrating on the rising heat curve**	**the DRS; trigger: the date**

Ramadan 1448 is expected from about 8–9 February 2027 to Eid on 9 or 10 March, depending on the moon, and it lands just before March's 360 forecast deaths, in a quarter centred on the Grand Mosque. The message: the Qur'anic exemption for the sick and elderly (2:184; the frail elderly pay fidya), drink between iftar and suhoor, and no midday labour. The grand imam of the Dioulassoba mosque is Siaka Sanou (he led the Eid prayer in March 2026); Imam Ahmad Sanogo gave the Tabaski 2026 sermon at Wara Wara, so name both as contacts. The Fédération des associations islamiques can carry it further, and griots at baptisms and funerals. Run the same message as 60-second spots in Dioula and Mooré, December to May, on Bobo's community stations (Savane FM, Radio Ahmadiyya, Radio LPC, and Radio Alliance Chrétienne, from RSF's 2024 list) and the radio communale. Burkina's health minister issued heat advice in March 2025.

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: no Dioula-language programme grid and no slot costs were found. The Fédération's role is a proposal. The Bamako precedent (April 2024: Gabriel Touré hospital recorded 102 deaths in four days, about half of them over 60, during Ramadan and power cuts) is widely reported, but the cause was not established.

5. Draw up a courtyard buddy list, and sweep for displaced families, by 31 January

PARTIALLY CONFIRMED | FRONTLINE · EMERGENCY MANAGER | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
CRBF Houet provincial committee, with family heads and quarter chiefs	list by 31 January 2027; daily checks February–May	volunteer time	unseen deaths indoors on hot nights	no payer needed; trigger: the date

With each family head, list every elder or sick person who sleeps alone in a closed banco room, and name one neighbour to check on them daily from February to May. In arrondissements 2, 4, and 6, where the AGORA survey worked, reach displaced families through relatives already settled here, and walk them to the CSPS and to CONASUR registration. In that survey (REACH; data September–November 2022, published August 2023), displaced households averaged 9.7 people, and 17% had enough food against 53% of host households. About 24% were registered on arrival (63% were not, and 13% did not know). Their work is outdoors: 47% in building trades and 31% in day labour. They get information mainly from the media (70%) and friends and family (55%); only 13% from religious leaders. The last published figure for displaced people in the region is 86,160 (SP/CONASUR, 31 March 2023).

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: the CRBF has 47 provincial committees and runs a CSPS in Bobo, but no page naming the Houet committee was found. A figure of 90 volunteers, 84 leaders, and 123,000 people reached had no source and was dropped.

6. ONEA publishes the hot-season water rotation by 31 January, with standpipe priority in writing

PARTIALLY CONFIRMED | EMERGENCY MANAGER · FRONTLINE · SKEPTIC | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
ONEA Direction régionale, with the Mairie	published by 31 January 2027; applies March–May	within ONEA's budget; free standpipe water XOF 5.9 million (US$10,000), see funding	surprise multi-day dry taps in mud-brick compounds at the peak	ONEA; free water paid by a donor or the State; trigger: the date

ONEA Bobo has confirmed it uses alternating distribution when demand outstrips production. It named sectors 24 and 25 in 2021, when the deficit was about 30% of demand; in 2018 it was 23,000 m³ a day. The PAPEP project doubled Nasso production to about 52,000 m³ a day and added a 17 km pipe from Nasso to Bolomakoté (AFD lists it as complete), but the promised end of the cuts in 2023 slipped. The Samendéni transfer is still at the financing stage, and the works launched on 10 October 2026 serve sectors 17, 18, 26, and 27 (about 132,000 people), not Secteur 1. Post each sector's tap schedule and the working standpipes at the mosque and the Grand Marché. Standpipe water costs XOF 188 (US$0.32) a cubic metre (ONEA 2021 tariffs). In 2020, as a COVID measure, the State paid ONEA so that standpipe managers supplied water free, which is the precedent for paying for it now.

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: no rotation notice for 2024–26 was found, and no ONEA voucher scheme exists; the free-water line is a prepaid credit to standpipe managers.

7. Dengue's tail, in November: "Fever: no aspirin or ibuprofen; get tested"

PARTIALLY CONFIRMED | EMERGENCY MANAGER · PUBLIC HEALTH · HISTORIAN | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
District sanitaire de Dô, with the radio and mosque networks	November 2026	within action 4's radio spots	the complications from self-medication that drove the 2023 toll	the District; trigger: the date

WHO advises paracetamol for dengue fever and no anti-inflammatories. In 2023, Hauts-Bassins recorded 228 of Burkina's 709 dengue deaths (32%, year-end figure, Ouédraogo et al.), and clinicians at CHU Sourô Sanou linked complicated cases to late consultation and self-medication. Dengue rapid tests were made free in public facilities from 17 October 2023 "until the end of the epidemic is declared"; CMA Dô ran about 100 tests a day, half of them positive.*

* Suggested formulation: check with a health worker before sharing.

Corrected in verification: free tests are not confirmed for 2026, and no 2026 dengue season data were found, so the season is not called active. Ask at the CSPS.

8. Earmark 1,000 tonnes of SONAGESS's harvest purchase for sale in Bobo, and open the social-price sales to people without an ID card

PARTIALLY CONFIRMED | FOOD | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
SONAGESS (Guiriko directorate) with the Ministry of Commerce; the Mairie with SP/CONASUR and the CRBF for the ID opening	earmark within the November–January purchase; ID rule by January 2027; sales February–May	about XOF 145–160 million (US$247,000–273,000), State budget; ID registration about XOF 5 million (US$8,500), an estimate	the poorest being shut out of the one price-controlled channel	the State; trigger: INSD Guiriko food index up year on year two months running, or maize more than 25% above its November level

SONAGESS already runs a nationwide farm-gate purchase ("achat bord champ") from November to January; it launched on 4 November 2025, ran three months, and paid cash on the spot, with a 2025/26 maize floor price of XOF 145 (US$0.25) a kilo. The ask is to set aside about 1,000 tonnes of it for sale in Bobo's arrondissements from February to May. Social-price sales in Bobo are documented in May 2023 (XOF 6,000, US$10.22, per 50 kg sack) and February 2026 (subsidised rice in all arrondissements), one sack per beneficiary per sale. They required a national ID card (CNIB); open them to a CONASUR card or a quarter chief's attestation. Watch the INSD monthly price note, which publishes the Guiriko food index and maize-sack price about five weeks after each month ends.

Corrected in verification: the grain signal is weak. FEWS NET's August 2026 update projects western staple prices 20–35% below the five-year average through January 2027, with no peak date; Guiriko maize was down 42% year on year in February 2026, and XOF 159 (US$0.27) a kilo in March 2026. Late planting (2–4 weeks) and August–September dry spells cut the maize crop, so a February–May rise is inference. At a social price of XOF 120 a kilo against XOF 159, the discount is only about 25%. The El Niño signal shows in fresh produce

* Suggested formulation: check with a health worker before sharing.

instead: Bobo tomatoes were up 67% year on year in July 2026 (one FEWS NET mention, not a series). Grain exports stay banned (February 2026), flour exports were suspended on 9 October 2026, and livestock exports have been banned since 8 May 2026. No 2026 price for the XOF 6,000 sack was found.

9. Vouchers, not cash, for the poorest and displaced households in March–May

PARTIALLY CONFIRMED | PHILANTHROPIST · FOOD · ECONOMIST | ADAPTATION INVENTORY: NO PRECEDENT CONFIRMED

OWNER	BY WHEN	COST	PREVENTS	PAYER / TRIGGER
CRBF (e-vouchers through Red Rose), or WFP	**households enrolled by February; vouchers March–May 2027**	**XOF 35.1 million (US$59,800) for 1,000 households × 3 months**	**skipped meals among older and displaced people at the heat peak**	**donor grant to the CRBF; trigger: the date**

This was cash in the panel's draft, which is contraindicated as written: humanitarian cash is suspended (see "Do not do this"). The value is XOF 11,700 (US$19.90) a household a month, the national safety net's (Burkin Naong Sa Ya, World Bank). That is a top-up, not a full food transfer: WFP's last published value was XOF 8,000 (US$13.60) a person a month, about XOF 48,000 (US$81.80) for a household of six (2021–22). Across 37 countries, cash transfers cut women's mortality (RR 0.80, 95% CI 0.67–0.95) and under-five mortality (RR 0.92, 0.85–0.99) (Richterman et al., *Nature* 2023). Enrol households in the social registry now: the World Bank's XOF 70.5 billion (US$120 million) Economic Opportunities for Resilience Project, approved in mid-2026, expands it and adds displaced people's records, though it will not pay Bobo households by March 2027.

Corrected in verification: the Richterman finding is for cash; whether it carries over to vouchers is unproven. Ask OCHA and WFP whether the CERF drought framework (XOF 4.7 billion, US$8 million, rural) or any African Risk Capacity or Replica policy triggered in 2026: no evidence was found that either did, and no 2026–27 ARC policy was found.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal.

Action	Croix-Rouge Burkinabè (CRBF)	IFRC	ANAM	Mairie de Bobo-Dioulasso	DRS Guiriko and District de Dô	CHU Sourô Sanou and CMA Dô	Imams, griots, and radio	ONEA	SONAGESS and Ministry of Commerce	SP/CONASUR	WFP
1. Bobo trigger in the heat protocol	**A/R**	**R**	**R**	**C**	**C**	**I**					
2. Daily heat-death count	**I**		**I**	**R**	**A/R**	**R**					
3. Clinic stock and weekly reporting	**I**				**A/R**	**R**					
4. Ramadan heat message	**C**			**I**	**A**		**R**				
5. Buddy list and displaced-family sweep	**A/R**			**C**	**I**					**C**	
6. Published water rotation	**I**			**R**			**I**	**A/R**

9. Vouchers for the poorest	**A/R**			**I**						**C**	**R**

What the chart shows: the Croix-Rouge Burkinabè is accountable for three of the nine actions, including the one that decides whether any heat money moves, and the DRS Guiriko for three, the health core. Actions 1, 2, 5, 6, and 7 cost little or nothing; they need decisions from the CRBF and IFRC, the DRS, and ONEA, not money.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs. It covers Bobo-Dioulasso commune; nothing is costed for Dioulassoba alone.

FLOOR

XOF 29.4 million (US$50,000)

TARGET

XOF 89.9 million (US$153,100)

CEILING

XOF 191.3 million (US$325,800)

LARGEST UNCERTAINTY

whether the CRBF Houet committee can deliver in Bobo, and Treasury-custody delays

Floor = CRBF readiness (the Bobo trigger, a list of vulnerable people, volunteer training; XOF 14.7 million, US$25,000) + clinic stock (XOF 14.7 million, US$25,000) = XOF 29.4 million (US$50,000). Target = heat protocol for 10,000 people at XOF 3,126 (US$5.32) a head (XOF 31.3 million) + clinic stock (XOF 17.6 million) + free standpipe water (XOF 5.9 million) + e-vouchers for 1,000 households × XOF 11,700 × 3 months

* Suggested formulation: check with a health worker before sharing.

(XOF 35.1 million) = XOF 89.9 million (US$153,100). Ceiling = heat protocol for 20,000 people (XOF 62.5 million) + e-vouchers for 3,000 households (XOF 105.3 million) + stock (XOF 17.6 million) + water (XOF 5.9 million) = XOF 191.3 million (US$325,800). The target moved –31% in verification, from XOF 130.8 million (US$222,800), just under a third; most of the drop is the cash line recast as vouchers at the published safety-net value.

How money can move here: the government suspended humanitarian cash transfers in October 2023, totally by 2024, and no lifting was found in 2026; the CRBF moved to e-vouchers through Red Rose, and WFP has made no cash transfers since late 2023. Decree 2025-1440 (16 October 2025, extended 5 February 2026) requires NGOs and associations to hold their accounts at the Banque des Dépôts du Trésor (BDT), so allow for transfer delays, including on CRBF funds. The 2025 association law requires at least 80% of resources to go to the field, and more than 1,100 associations were suspended or dissolved between mid-April and June 2026. The 2026 finance law adds accounting obligations for churches and mosques, so mosque committees should choose beneficiaries, not hold money. US humanitarian aid reportedly ended in February 2026.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
CRBF Houet committee	Actions 1 and 5: Bobo heat protocol for 10,000 people (trigger setup, awareness, WASH, targeted home visits); readiness half in the floor	XOF 31.3 million (US$53,200)	direct grant (through BDT custody)	CHF 4.40 (XOF 3,126, US$5.32) a head = the Ouagadougou protocol's total divided by its reach, not a unit cost	Partially confirmed
CHU Sourô Sanou, CMA Dô, and the Secteur 1 CSPS, through the DRS Guiriko	Action 3: ceftriaxone, test kits, ORS and zinc, IV fluids, dengue tests by 15 December	XOF 17.6 million (US$30,000)	pre-positioned stock	Unit costs unpublished; vaccine is covered by the ICG and Gavi, so not funded	Unverified unit costs
ONEA standpipe managers (gestionnaires de bornes fontaines); beneficiaries chosen by mosque and association committees	Action 6: free standpipe water, March–May	XOF 5.9 million (US$10,000)	prepaid credit (2020 COVID precedent)	About 31,400 m³ at XOF 188 (US$0.32) a m³, or about 17,000 people × 20 L a day × 90 days	Partially confirmed

* Suggested formulation: check with a health worker before sharing.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
CRBF (Red Rose e-vouchers)	Action 9: 1,000 households × XOF 11,700 (US$19.90) × 3 months	XOF 35.1 million (US$59,800)	e-voucher	Burkin Naong Sa Ya value (World Bank); cash mortality effect (Richterman 2023) unproven for vouchers	Partially confirmed
CRBF Houet committee	Action 1: a further 10,000 people (ceiling only)	XOF 31.3 million (US$53,200)	direct grant	As above; only if the committee shows it can deliver	Partially confirmed
CRBF (Red Rose e-vouchers)	Action 9: a further 2,000 households (ceiling only)	XOF 70.2 million (US$119,600)	e-voucher	As above; depends on Red Rose capacity in Bobo, unverified	Partially confirmed

Outside the envelope: radio spots, XOF 500,000 (US$850, action 4), and ID-free registration, about XOF 5 million (US$8,500, action 8), are State and Mairie administration. The SONAGESS earmark, XOF 145–160 million (US$247,000–273,000), is State budget, not philanthropy. Working-capital credit for 200 women grain resellers at XOF 150,000 (US$255) each, XOF 30 million (US$51,100), is a practitioner design with no precedent here and is unverified; it is mentioned only. Already in place, and none of it covers urban heat in Bobo: the Ouagadougou heat protocol, the CERF drought framework (rural), and the flood plan.

A funder's view: pay for Bobo's trigger before paying for relief. Without a Bobo threshold and a named list of who to reach, every later franc arrives after the deaths.

* Suggested formulation: check with a health worker before sharing.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives here.

Planning on cash transfers

CONTRAINDICATED

Found in verification; it began as the panel's cash line. The government suspended humanitarian cash transfers in October 2023, and the suspension was total by 2024. The CRBF moved to e-vouchers, WFP has made no cash transfers since late 2023, and a January 2026 case study (Cash Hub and IFRC) reports no lifting. A plan built on cash will not pay out.

Instead: CRBF e-vouchers or in-kind help (action 9).

Copying Ouagadougou's 42.4 °C heat trigger to Bobo

CONTRAINDICATED

The Ouagadougou trigger is the 90th percentile of that city's hottest month. Bobo is cooler: its April record is 42.0 °C and its mean April maximum 37.4 °C. A copied trigger would never fire, and the protocol would sit funded through the deadliest weeks.

Instead: a threshold set on Bobo's own percentile, with a night-time minimum (action 1).

Giving heat advice that needs electricity: fans, air conditioning, or "cool rooms"

DO NOT PARTIALLY CONFIRMED

SONABEL communiqués describe evening load-shedding, 18h–22h, in Ouagadougou and Bobo when supply falls short; in Bamako in April 2024, cuts lasted more than 12 hours a day. Whether Bobo was load-shed in the 2025–26 hot season is unconfirmed, and the communiqués' dates were not visible.

* Suggested formulation: check with a health worker before sharing.

Instead: skin wetting, shaded courtyard sleeping, water stored before the hot season, and backup power for the clinics.*

Telling older people to rely on a fan in dry heat above about 35 °C*

DO NOT CONFIRMED

In a trial of 18 adults aged 65–85, eight hours at 36 °C and 45% humidity, fans did not lower peak core temperature (O'Connor, Meade, and colleagues, *JAMA* 2024). A 2024 review (Meade et al., *Lancet Planetary Health*) finds people with impaired sweating get little cooling from fans. Modelling (Morris et al. 2021) puts the limit for older adults at 37–38 °C, and lower in dry heat or on anticholinergic drugs. Bobo's hot season, at 40 °C and more, is outside all of them.

Instead: wet the skin and let the air cool it; shade and drinking water.

Storing water in open jars and drums against the cuts, and counting on spraying

DO NOT CONFIRMED

Aedes mosquitoes breed in stored water, and Burkina recorded 709 dengue deaths in 2023. The 2023 response leaned on larval control in the compounds, not on spraying alone.

Instead: tight lids, and empty containers weekly.

Running a generic "drink water often" campaign through Ramadan

DO NOT CONFIRMED

From about 8 February to 9 March 2027 the people most at risk will be fasting through the day, and a daytime drinking message asks them to break the fast or ignore the advice. The Grand Mosque sits in Dioulassoba.

* Suggested formulation: check with a health worker before sharing.

Instead: fasting-specific guidance through the imams: the exemption, drinking between iftar and suhoor, and no midday labour (action 4).

Taking aspirin or ibuprofen for a fever in dengue season*

DO NOT CONFIRMED

WHO advises against anti-inflammatories such as aspirin and ibuprofen in dengue. In 2023 clinicians in Hauts-Bassins linked complicated and bleeding cases to self-medication.

Instead: paracetamol, and a test at the CSPS or CMA (action 7).

Buying heat-income insurance

DO NOT CONFIRMED

None is sold in Burkina. Index cover here is agro-pastoral only (APSAB), and the precedent for heat-income cover is Indian: SEWA's scheme pays XOF 1,200–11,700 (US$2–20) a member and took a year to set up. It cannot be bought before March.

Instead: pay for the Bobo trigger (action 1).

Assuming sachet water is safe

DO NOT PARTIALLY CONFIRMED

About 23% of 257 sachet-water samples from Ouagadougou failed the Burkina or WHO standards, or both (Sossou et al., 2iE and LNSP, IAHS 2022). That is a conference abstract, not a peer-reviewed paper, and the samples were from Ouagadougou, not Bobo.

* Suggested formulation: check with a health worker before sharing.

Instead: brands tested by the national public health laboratory (LNSP), or chlorinated water.*

Funding meningitis vaccine locally

DO NOT CONFIRMED

Reactive vaccine comes through the ICG, and Gavi supports introduction; Burkina requested ICG doses in the 2026 season, so the route is live. Local money for vaccine duplicates it.

Instead: fund treatment stock in the clinics (action 3).

WHAT HAS HAPPENED HERE BEFORE THE RECORD

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
1968–73 (El Niño 1972–73)	Sahel drought, with families migrating out	No Bobo toll recorded	Not recorded
1983–84 (after the 1982–83 El Niño)	Drought; rainfall bands shifted south toward the Comoé and the southwest	Not sourced	Not recorded
1996	Meningitis A epidemic, the country's worst; Sanou Souro paediatrics admitted 241 children in the first half of the year	About 42,000 cases and over 4,000 deaths nationally	Another wave followed in 2006–08
2006–08	Meningitis A wave in the Bobo area	1,677 (2006) and 1,865 (2007) deaths nationally	MenAfriVac, December 2010: 10.8 million people vaccinated in about 10 days; serogroup A risk down 99.8%
January–February 2011	Meningitis in Hauts-Bassins, from other serogroups	56 cases, 11 deaths	Serogroups C, W, and X remain

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
August 2016	Recurrent floods in sectors 17, 21, and 22	None reported	A fix for sector 17 was priced at XOF 5 billion (US$8.5 million); the commune said it could not pay
July–December 2023 (El Niño onset)	Dengue epidemic, which started in Hauts-Bassins	228 of Burkina's 709 deaths (32%)	Free dengue tests from 17 October 2023, during the epidemic
2023	Pollution of the Houet at Dioulassoba	More than 200 sacred catfish dead	The commune paid XOF 50 million (US$85,200) itself for drain cleaning, the only flood precedent carried out
1–5 April 2024 (El Niño decay)	1-in-200-year Sahel heatwave; nights to 32 °C	Not counted in Burkina; about 4 a day arrived dead at one Ouagadougou hospital, mid-March to mid-April (an estimate)	Nothing: no Bobo count, no heat plan in operation
9 June 2024	Floods in Bobo; the fire service (BNSP) deployed	Not reported	Not recorded
6–8 October 2024	133 mm of rain on 6–7 October, 237 mm in a week; walls collapsed; the RN1 cut	Not reported	Not recorded
April 2026	Heat up to 42 °C, with power cuts	Not reported	Not recorded

The recurrence nobody has noticed: the last El Niño hit here twice, a year apart, and both blows landed here first. The 2023 onset year brought the dengue epidemic that started in this region; the April 2024 decay spring brought the 1-in-200-year heat. The 2026–27 event runs the same calendar, and March–April 2027 is the April 2024 slot. ENSO phases in this table are our assessment against NOAA's ONI record, not sourced per event.

* Suggested formulation: check with a health worker before sharing.

WHERE THE EXPERTS DISAGREE — UNRESOLVED

- **Fund the heat protocol first** (Philanthropist) versus **the protocol has never been evaluated, and its trigger cannot fire in Bobo** (Skeptic). The ranking takes both: pay for the Bobo trigger and the death count first (actions 1 and 2), then outreach. An evaluation needs the count.
- **Children under five carry the steepest heat effect** (Public health, from Nouna) versus **older people sleeping alone on hot nights are most at risk** (Emergency manager, Frontline, Skeptic). Nouna is rural; Bamako's 2024 deaths were half over 60. Both are kept (actions 3 and 5).
- **Hold lean-season grain for Bobo** (Food) versus **grain here is 20–35% below average and the social price saves only about 25%** (verification). The earmark matters only if the INSD trigger moves. Fresh produce and protein, not grain, carry the El Niño signal, and nothing in this briefing addresses them. Cash would beat in-kind in a surplus market, but cash is suspended.

WHAT NOBODY COVERED — BLIND SPOT

No lens covered three things. First, insecurity on the roads into Bobo, and what a blockade of the city would do to clinic resupply; if it came, action 3's December deadline would matter more. Second, the night-time temperature inside banco rooms: no Bobo measurement exists, and it is what decides whether courtyard sleeping is enough. Third, how the 2025–26 association suspensions affect which local groups can still operate, which decides who can deliver actions 5 and 9.

HOW TO READ THIS — METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are published at region scale, for Hauts-Bassins (now Guiriko). They are not figures for the quarter or the city. The El Niño projection covers *heat only*; drought, flood, fire, smoke, and crop failure are additional to it and are carried here by the historical record rather than by a published number.

* Suggested formulation: check with a health worker before sharing.

- **Scope.** The location was taken as given: Dioulassoba (Sya), the historic core of Bobo-Dioulasso, around the Grand Mosque on the Houet, at about 11.180°N, 4.296°W. It is Secteur 1 of Bobo-Dioulasso commune (formerly "Dioulassoba", in the Konsa arrondissement of the 1993 structure); its number under today's seven arrondissements is unconfirmed. No population is published for the quarter (Konsa arrondissement had 105,850 people in 2006, INSD); the commune had about 900,000 at the 2019 census. Hauts-Bassins Region was renamed Guiriko in the July 2025 reorganisation into 17 regions; the Climate Impact Lab data use the old GADM unit. The actions are built for the commune and the region. Mortality figures exist only at region level.
- **Exposure.** Climate Impact Lab El Niño Heat Mortality Tracker data, file `v261026_adm1_output_BASE_rounded_cust.csv` (version of 26 October 2026, pre-peer-review): Hauts-Bassins Region (GADM BFA.9_1, "Haut-Bassins" in the data), 79 additional heat deaths June–September 2026, 900 forecast October 2026 – March 2027 (October 60, November 130, December 45, January 110, February 190, March 360), 980 in total, the highest of Burkina Faso's 13 GADM regions; Burkina Faso, 8,000 (6,800 October–March, 3,100 of them in March); the world, 857,400. This update supersedes the September report *451,000 at Risk*. Method: ECMWF SEAS5 seasonal forecasts applied to temperature–mortality relationships against a 1996–2025 baseline. The figures count heat only; we inferred this from the data, because cold countries show exactly zero in every winter month. They are never added to the Impact Map's long-run projections.
- **Expert panel.** Eight simulated expert lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst) each researched this place independently and in parallel, from web sources in French and English, to a fixed brief.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias (whether the evidence behind an agreed action came from a setting like this one) before it counted in an action's favour. Contradictions were kept, not resolved by dropping a side. Actions were ranked by expected lives saved per unit of effort before the peak, each was given a named payer and trigger or marked unfunded, and the funding placements were reconciled against the ranked list.
- **Verification.** Five verifier agents (financial instruments; health; community, heat behaviour, and water; food; the funding envelope) checked every recommendation on three tests: evidence (the primary source and its effect size), transferability (whether that evidence came from somewhere like here), and feasibility (whether it can be done here before the peak). Financial actions were also checked for availability in this jurisdiction, a named payer, a trigger threshold, and whether they already exist; food actions for published triggers and timing. The funding envelope was checked for real recipients, published unit costs, and duplication, then re-summed.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.

* Suggested formulation: check with a health worker before sharing.

- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not usable in this run. The inventory renders in the browser and returned no entries to the agents' fetcher, so no precedent could be confirmed there. No action here should be read as having no precedent; none was checked.
- **Money.** Costs are shown in West African CFA francs (XOF) with US dollars in parentheses, at XOF 587.14 = US$1. The rate comes from the fixed peg of XOF 655.957 = €1 and the ECB reference rate of €1 = US$1.1172 (30 October 2026). Figures published in Swiss francs (the Red Cross protocol) are converted at about CHF 1 = US$1.21 (late October 2026, market converters), so CHF 219,935 is about XOF 156 million (US$266,000).
- **Reader.** No role was given, so the For you section is written for a resident. Its steps were taken from the verified actions and from what the panel found about households here. Any step not drawn from a ranked action was verified on the same three tests. The rest of the report is written for the commune and its partners.
- **Language.** A French version accompanies this one, because French is the language of Burkina Faso's administration. Residents speak Dioula (the city's lingua franca), Bobo, Mooré, and Fulfulde; no version was made in those, and action 4 asks for the key messages to go out on radio in Dioula and Mooré instead.
- **Health wording.** Passages where a wording error could hurt someone (dengue medicines, meningitis danger signs, ORS and zinc, cooling and fans, and sachet water) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented; where data is thin, the report says so and shows the containing geography's number with its arithmetic. The one exception is labelled where it is used: the heat protocol's cost a head is its total divided by its reach. Every source is listed below with its verification status.
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. ANAM station data were not obtained, so Bobo's climatology comes from a secondary table. The IFRC and CERF anticipatory-action overview PDF returned 403. No ONEA rotation notice for 2024–26, no Dioula radio grid, and no radio slot costs were found. Dioulassoba's arrondissement and population are unconfirmed. There is no Bobo grain price for October 2026 (the latest INSD Guiriko price is for March 2026), and FEWS NET's September–October outlook was not yet published. The locator map shows the quarter at country scale. This briefing was run in parallel with one for Aboabo, Kumasi (Ghana) in the same session.

* Suggested formulation: check with a health worker before sharing.
