Central Jakarta, Jakarta

Central Jakarta's pipes are holding, but its dengue is the worst in the city, and its dead have come from night fires and from floods in both a Thamrin basement and its canal-side kampung. First, point the jumantik already working in Cempaka Putih and Johar Baru at the containers, and get every puskesmas referring dengue warning signs the same day.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
Jakarta Raya (whole province, one row)	~25 for Central Jakarta, scaled (DKI: 260)	6-month, Sep 2026 – Feb 2027	Dengue and heat now; night fires; canal floods from December

13/13 local recommendations checked. 2 confirmed as written, 11 corrected, 0 unverified; 5 province-wide Do not cards carried from the province file. Revised 15 October after the set audit: no verdict changed. **The funding target fell 95% in verification**, from the panel's Rp1,061 m to Rp49.5 m: the cadres it would have paid are already paid by the province, extinguishers are in the fire service's budget, and no source shows open water storage at the panel's scale. Exposure: Climate Impact Lab, *451,000 at Risk*, Sep 2026, pre-peer-review, heat only. Central Jakarta's ~25 is our arithmetic, not an Impact Lab finding: 260 × 1,032,236 ÷ 10,669,702 = 25.2 (Dec–Feb: 147 × the same share = 14.2).

EXECUTIVE SUMMARY — AT A GLANCE

6.18°S 106.83°E, Indonesia · BPS boundaries via OCHA COD-AB; OpenStreetMap contributors (ODbL); Dinas SDA (Satu Data Jakarta); Natural Earth

- **The risk.** Cempaka Putih had Jakarta's highest dengue rate in 2025; floods killed in Petamburan and a Thamrin basement (2013), and fires kill at night in the kampung.
- **First action.** From 1 November, jumantik in Cempaka Putih and Johar Baru report containers fixed, not fogging rounds.
- **The money.** Rp19.8 m / Rp49.5 m / Rp99.0 m (US$1.1k / 2.8k / 5.5k): lidded drums only where the rounds find open storage.
- **Do not.** Do not tell people to go to "the official evacuation site": none is listed in Central Jakarta.

* Suggested formulation: check with a health worker before sharing.

Central Jakarta (Kota Administrasi Jakarta Pusat, Kemendagri 31.71; BPS 3173) has 1,032,236 people (BPS, SP2020-based 2026 projection), eight kecamatan, and 44 kelurahan on 47.9 km², the smallest and densest of the five mainland cities. Its poverty rate is 4.70% (BPS, March 2025). The national government and the commercial core (Merdeka Square, Thamrin, Tanah Abang, Senen) sit beside some of the densest kampung in the region: Johar Baru, Kemayoran, Petamburan, and Karet Tengsin. The mayor is appointed and has no budget of its own: the province holds the money and PAM Jaya runs the pipes, so this briefing names the city offices (suku dinas) that do the work and leaves city-wide items to the province file (`jakarta-province-*`). It is written as a proposed draft (*draf usulan*) for the two-year review of the RPB 2023–2027 (Pergub DKI 1/2024).

The season. An El Niño dry season that is already here: it has dried shallow wells and the ends of the pipe network and held smog over the city; it is expected to delay and shorten the rains; and it does not make the January–February floods less likely. Each briefing therefore covers one season, from dry wells, smog, and heat now, through dengue bred in stored water and the floods, to March 2027.

What is different here. Central Jakarta is mostly piped (102,271 household connections in 2025, PAM Jaya via Satu Data), and no dry-well or pipe-end shortage in a Central kelurahan was found for 2023 or 2026. Its water risk is a plant cut, not a dry well: the west of the city hangs on IPA Pejompongan I and II, which sit in Bendungan Hilir and draw Jatiluhur water down the Tarum Barat canal, and the east on IPA Pulogadung. Its flood deaths have come from a broken canal dike, a flooded basement, and its kampung (Petamburan in 2013, Johar Baru in 2015), and its fires kill at night in lanes no truck can enter.

The drought warning. BMKG put West, Central, East, and North Jakarta and Kepulauan Seribu at *Awas* for 11–20 September (BPBD DKI, via Kompas TV, 14 Sep); South Jakarta was not listed. BMKG's September bulletin is no longer online, and one report differs. For October dasarian II, bmkg.go.id puts Central, South, and North Jakarta and Kepulauan Seribu at *Awas*, West at *Siaga*, and does not list East.

WATER AND AIR STATUS	READING	DATE
Jatiluhur reservoir (PJT II), source of most of Jakarta's raw water	90.73 m, about 16 m below its normal top of about 107 m; the level at which raw water to Jakarta is cut is **not published**	15 Oct 2026, 07:55 WIB
BMKG drought early warning, Central Jakarta	**Awas** (highest level), read from bmkg.go.id on 15 Oct; also *Awas* for 11–20 Sep. Dasarian III not found on 15 Oct	Dasarian II, Oct 2026

* Suggested formulation: check with a health worker before sharing.

WATER AND AIR STATUS	READING	DATE
Manggarai floodgate (Siaga 3 / 2 / 1 at 750 / 850 / 950 cm)	540 cm, below Siaga 3	16 Oct 2026, 09:00 WIB
Pintu Air Karet, Banjir Kanal Barat (450 / 550 / 600 cm)	250 cm, below Siaga 3	16 Oct 2026, 09:00 WIB
PAM Jaya outage reaching Central Jakarta	Pejompongan I substation work: 14 Central kelurahan in Tanah Abang, Gambir, and Menteng	5–6 Jun 2026 (latest found)
Tanker drops (reported, not complete)	None found in a Central kelurahan	Aug–Oct 2026
Worst air reading found	DKI1 Bundaran HI: PM2.5 ISPU 122, **tidak sehat**, and "unhealthy" every hour from midnight	08:00 WIB (page undated, read 15 Oct 2026)

Dengue by kecamatan (Dinkes DKI via Satu Data Jakarta): incidence in 2025 per 100,000, Cempaka Putih 226.3 (**1st of DKI's 44 kecamatan**; Cengkareng 196.4 and Kelapa Gading 184.5 follow), Johar Baru 133.7 (5th), Sawah Besar 103.3 (14th), Senen 89.5 (21st), Menteng 55.2, Kemayoran 52.9, Tanah Abang 47.6, and Gambir 39.3 (44th, the lowest). Satu Data's 2024 column counts *suspected* cases (1,247 in Central); Sudinkes Jakarta Pusat's own series is 1,222 cases and 6 deaths in 2024, and 924 cases and 2 deaths (Tanah Abang and Cempaka Putih) from 1 January to 10 November 2025, Cempaka Putih 223 and Johar Baru 182. Thresholds and levels: BPBD DKI's water-level page. Drinking-water source by household head (DPPAPP, 2025, Satu Data): refill water 97,068, bottled 63,914, piped 50,746, bore well 8,703; a drinking source, not household supply, so no "% on wells" is derived from it.

WHAT THIS PLACE SHOULD DO

RANKED

Ranked by expected lives saved per unit of effort before and through the peak. Backing lenses are shown per action. Convergence was checked

* Suggested formulation: check with a health worker before sharing.

for shared bias. Each action carries the RPB's columns: owner, place, target, date, and source of funds.

1. From 1 November, the jumantik already working in Cempaka Putih and Johar Baru report containers found and fixed, not fogging rounds, and hand a lidded drum with a named custodian to any household found storing water open

PARTIALLY CONFIRMED | PUBLIC HEALTH · FRONTLINE · PHILANTHROPIST · SKEPTIC | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Pusat and the two puskesmas kecamatan, with jumantik and PKK cadres; BAZNAS (BAZIS) DKI buys the drums	Reports from November; drums handed over by 15 Dec 2026; rounds weekly to March 2027	Rp49.5 m at target, drums only (F01); the cadres are already paid	The dengue peak of March–May bred in this season's stored water

Cempaka Putih had the highest dengue incidence of Jakarta's 44 kecamatan in 2025 (226.3 per 100,000) and Johar Baru the fifth (133.7). Within Cempaka Putih, kelurahan Rawasari had the most cases (93 of 223 to 10 November 2025). The cases are mostly working-age adults: 270 of 924 in Central were aged 20 to 44, and 6 were over 64. The rounds already exist: Cempaka Putih raised its mosquito-nest checks (PSN) to three a week in 2025, and its January–March cases fell from 68 in 2025 to 25 in 2026. What changes is what they count. A round that reports "containers found, containers fixed" tells Sudinkes where breeding is; a round that reports fogging tells it nothing. In Jakarta the containers are mostly bathtubs (bak mandi), buckets, and dispenser trays, so the work is draining and scrubbing; a lidded drum (about Rp198,000) goes only where a household stores water open, logged to a named custodian. The best trial evidence is Camino Verde (BMJ 2015; Nicaragua and Mexico): community mobilisation without insecticides cut recent dengue infection in children by 29.5% (95% CI 3.8–55.3).

Corrections: Camino Verde tested mobilisation, not drum handouts, so the drums are unproven on their own, and its cost per DALY (about US$29,600 in Mexico, "marginally cost-effective"; Tschampl, IJID 2020) argues for targeting, not volume. The kecamatan's own report does not credit fogging for the 2026 fall; it calls household PSN the most effective step. Jumantik already receive a provincial allowance

* Suggested formulation: check with a health worker before sharing.

(about Rp500,000 a month, a 2015 provincial plan). PAM Jaya and TP PKK's free tanks are 300 L, not 500 L (target 2,000 in 2026, mainly for 2A1 and 2A2 customers with buildings under 70 m²; the handouts on record, January to April 2026, were in West and North Jakarta), and households eligible for one get it instead of a drum. Province rule: action JK-02.

2. By 30 November, every puskesmas kecamatan triages dengue warning signs with same-day referral to its own RSUD, escalating to RSUD Tarakan and RSCM, with written routes for Menteng and Senen, which have no RSUD

PARTIALLY CONFIRMED | PUBLIC HEALTH · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Pusat; the eight puskesmas kecamatan; the six RSUD; RSCM and Dinkes DKI consulted	**30 Nov 2026, with drills in December**	**Staff time and stock in existing budgets; not costed**	**Dengue cases becoming deaths in the peak**

Dengue killed 6 people in Central Jakarta in 2024 and 2 in 2025, in Tanah Abang and Cempaka Putih (Sudinkes Jakarta Pusat). Indonesia's dengue case fatality rate fell to 0.42% in 2025, and Kemenkes attributes deaths mainly to late arrival at care, so the lever before March is case management: the Kemenkes clinical guideline (PNPK; KMK HK.01.07/MENKES/9845/2020 for adults), warning signs, haematocrit, fluids, early referral. Central has six RSUD: Cempaka Putih, Johar Baru, Kemayoran, Sawah Besar, Tanah Abang, and Tarakan (in Cideng, Gambir), the provincial referral hospital. Menteng and Senen have none; Senen holds RSCM, the national referral hospital, and RSPAD, the army hospital. Write their routes now. From January, after floods, the same alert covers leptospirosis (province action JK-06).*

* Suggested formulation: check with a health worker before sharing.

Corrections: the headline "8 meninggal" is the two years together (6 in 2024 and 2 in 2025); the 2024 deaths are not located. Sudinkes's 1,222 cases for 2024 and Satu Data's 1,247 suspected cases are different series; they are not mixed here. Gambir is not a gap: Tarakan is in Gambir. The Menteng and Senen routes are this briefing's proposal; no Sudinkes referral map was found.

3. From November, cadres already paid by the province check weekly on older hypertension and diabetes patients living alone in Johar Baru, Kemayoran, Senen, and Tanah Abang, and daily on 34 °C days or when DKI1 reads "tidak sehat"

PARTIALLY CONFIRMED | PUBLIC HEALTH · PHILANTHROPIST | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
The puskesmas kecamatan, with Dasawisma, jumantik, and PKK cadres and mosque groups	Lists by 30 Nov 2026; checks to March 2027	APBD (existing line): cadre time the province already funds	Heat and smog deaths filed as heart failure in a hot room

Heat is the one hazard with a number: about 25 excess heat deaths for Central Jakarta from September to February, by our scaling of Impact Lab's province row, against 2 dengue deaths in 2025. Those deaths will not be written down as heat: they are older people with heart, kidney, or lung disease, indoors, in rooms without a breeze. The smog is worsened by a dry El Niño season, not caused by it: the provincial reference station DKI1 Bundaran HI read PM2.5 ISPU 122, "tidak sehat", at 08:00, and every hour from midnight. The visit covers water, medicines (diuretics stay with puskesmas clinicians), signs of heat illness, and from December the dengue warning signs. BMKG has no formal heat warning for Jakarta, so the trigger is its daily maximum forecast (province action JK-07).*

Corrections: the evidence usually cited (the Ahmedabad heat plan, Hess et al. 2018) is an ecological study of a whole plan at 40–47 °C dry heat, did not test check-ins, and found differences that were not statistically significant; treat this as a low-cost measure, not a proven one. The donor stipend the panel proposed is dropped: the province already funds Dasawisma group coordinators (Kepgub 497/2025: an

* Suggested formulation: check with a health worker before sharing.

operational fund of Rp750,000 a month from 1 September 2025, not pay to every cadre) and jumantik (about Rp500,000 a month, a 2015 provincial plan). Prolanis runs through BPJS at the puskesmas, but no Central patient list was confirmed. The DKI1 page carries no date; it was read on 15 October.

4. By 30 November, Sudin Gulkarmat and the lurah audit extinguishers against the two-per-RT target in the kelurahan that burned in 2023–26, name a custodian for each, and add a midnight siskamling round

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · SKEPTIC · PHILANTHROPIST | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Gulkarmat Jakarta Pusat, with the lurah and RT heads; mosque groups consulted	Audit and top-up by 30 Nov 2026; night rounds through the dry months	Gulkarmat's recurring extinguisher budget; night rounds unpaid	Night fires in lanes no truck can enter, fought with buckets for the first twenty minutes

The kelurahan are Kebon Kosong, Tanah Tinggi, Cideng, Serdang, Kampung Bali, and Petojo Selatan. On 23 August 2023, in the last El Niño dry season, a fire in Kebon Jahe Kober (Gambir), across the road from the city government office, killed 2 and burned 154 buildings; residents fought it with buckets before the trucks came. Kemayoran Gempol (Kebon Kosong) lost more than 500 houses on 21 January 2025, and about 1,700 people were displaced. In five nights in June 2026, Kebon Kosong lost 304 houses (firefighting began at 21:05), Tanah Tinggi 30 (00:15), and Cideng one life, a resident aged 80, in a lane too narrow for the trucks (04:48). All three burned between 21:00 and 05:00, so add a midnight round to the siskamling checking stoves, overloaded sockets, and charging batteries. Governor's Instruction 5/2025 sets at least two extinguishers per RT, and Gulkarmat DKI had placed about 19,000 at RT level by 3 August 2026 from its own budget. Johar Baru has one fire post (Satu Data).*

* Suggested formulation: check with a health worker before sharing.

Corrections: the 2023 fire's source names the kecamatan (Gambir), not the kelurahan, so "Petojo Selatan" is our inference from the location. No source says who refills or maintains RT extinguishers, which is why each gets a named custodian and a check date. The claim that hydrants run dry in a plant cut was not verified and is dropped. Fires here are mostly electrical and cooking fires all year; the El Niño link is dry fuel and water, not ignition.

5. By 30 November, Sudin Citata and BPBD write to every building with a basement along the Banjir Kanal Barat, advising it to clear the basement and close floodboards when Manggarai reaches 850 cm and rising, or Pintu Air Karet 550 cm

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Citata Jakarta Pusat, with BPBD DKI and building managers; Sudin SDA consulted	Letters by 30 Nov 2026	Staff time	A repeat of the 2013 basement drownings on Thamrin

At about 10:00 on 17 January 2013 the Banjir Kanal Barat dike broke over about 30 m at Jl. Latuharhary, Menteng, and water ran down into the Thamrin corridor and the Palace grounds. Two cleaners, Abdul Arif Agus and Herdian Eko, drowned in the first basement of UOB Plaza; all four basements flooded. Their deaths are not on the province's list of 18 January, and they are outside BPBD's kelurahan table, which records one flood death in Central that month, in Petamburan. The canal built to protect Central Jakarta runs from the Manggarai gate past Pegangsaan, Menteng, Kebon Melati, Karet Tengsin, Bendungan Hilir, Kebon Kacang, and Petamburan, with office basements along it. BPBD's thresholds are Siaga 3, 2, and 1 at 750, 850, and 950 cm at Manggarai and 450, 550, and 600 cm at Karet. A building that clears its basement at Siaga 2 has hours in hand; one that waits for water on the ramp does not.

* Suggested formulation: check with a health worker before sharing.

Corrections: no power was found for Sudin Citata to order a private basement cleared, so this is an advisory letter, not an order. The 2013 breach came without a gauge warning (Manggarai read 1,020 cm on 15 January), so the trigger is precautionary. The dike belongs to BBWS Ciliwung-Cisadane (Ministry of Public Works); its repair, promised for December 2013, was still under sandbags on 14 January 2014. The letters go to the seven kelurahan the canal borders on this stretch (project GIS); an earlier list carried Thamrin-corridor kelurahan away from the canal (Gondangdia, Kebon Sirih) and left out Pegangsaan, at the Manggarai end.

6. By 15 December, the lurah of Karet Tengsin, Petamburan, Bendungan Hilir, Kebon Melati, and Serdang register the shelters people actually use, stock them, and post one door-to-door trigger: Manggarai at 850 cm and rising, or Katulampa at Siaga 2 (150 cm)

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · SKEPTIC · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
The lurah and RT heads, with Sudin Sosial Jakarta Pusat and mosque groups; BPBD DKI consulted	**15 Dec 2026**	**Mats, lights, and water from kelurahan operating lines; not costed**	**Night evacuations to places no list carries and no supply run reaches**

Satu Data Jakarta's list of 61 flood evacuation sites has none in Central Jakarta. On 29 January 2026, 50 people from Karet Tengsin sheltered at RPTRA Segar Berseri (RW 06) and the hall of Masjid Muhajirin (RW 07), neither of them on any list. Register those and one site in each of the other four kelurahan, confirmed with the keyholder, and stock them. Petamburan and Karet Tengsin flooded most often in BPBD's 2013–24 record (5 and 4 of 10 years); in January 2014 Petamburan stood 50–200 cm deep and 2,676 people left their homes. Katulampa, in Bogor (Siaga 3 / 2 / 1 at 80 / 150 / 200 cm), gives about 6–9 hours before the water reaches Manggarai, and Depok about 4–6 hours (BPBD DKI floodgate data): enough to knock on doors. Agree now where cooked food comes from for those who stay at home: in February 2021 Banser and PCNU Jakarta Pusat ran a kitchen in Karet Tengsin for exactly them. Count renters and street sleepers in, with volunteers rather than uniforms (Do not card 8).

* Suggested formulation: check with a health worker before sharing.

Corrections: the shelters were used on 29 January 2026, not through the month; "Segas" is matched to RPTRA Segar Berseri by inference. The trigger is Katulampa Siaga 2, not "Siaga" alone. On 4 March 2025 Balekambang went from Depok Siaga 1 to 1.5 m in about 4 hours, so the Depok figure is the short end. No Central flood death was found in 2025 or 2026.

7. By 31 October, PAM Jaya adds a household tier for the dense kampung to its tanker priority for any Pejompongan or Pulogadung cut, posts tanker schedules by RW, and lists where Central Jakarta's 246 public hydrants are

PARTIALLY CONFIRMED | ECONOMIST · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
PAM Jaya, with the kelurahan and RT heads; BPBD DKI consulted	Written rule and hydrant list by 31 Oct 2026	PAM Jaya's own budget; tankers already free	Dense kampung going without water in a plant cut while vital facilities are served

Central Jakarta's water fails at the plant, not the well. The 1 April 2024 leak on PJT II's raw-water pipe to Pejompongan cut 84 kelurahan, 20 of them in Central (all of Tanah Abang and Gambir, three in Menteng, four in Sawah Besar); the 5–6 June 2026 Pejompongan I outage cut 14 Central kelurahan; and the IPA Pulogadung outage of 31 October–1 November 2025 (22:00 to 02:00) cut 23, all of Kemayoran, Johar Baru, Cempaka Putih, and Senen, plus two in Sawah Besar. In August 2011 a broken Kalimalang canal gate stopped Pejompongan and more than 200,000 customers lost water. PAM Jaya's notices already give tankers to "vital facilities": hospitals, places of worship, and social foundations. Add a household tier for the dense kampung (Tanah Tinggi, Kampung Rawa, Galur, Petamburan, Karet Tengsin), post the schedules by RW (province action JK-03), and publish where the hydrants are: PAM Jaya reports 246 in Central, delivering only 26,536 m³ in 2025, but not where they stand.

* Suggested formulation: check with a health worker before sharing.

Corrections: the 2024 article says tankers were readied for vital facilities, not that they went first. Hydrants sit on the same mains and go dry in a cut, so "keep them open longer" was dropped. The rmol list names 22 places in Central, two of which are kecamatan, not kelurahan; the 2026 list's "Senayan" is in South Jakarta. Pulogadung is not in the GIS base; this briefing uses `IPA-PULOGADUNG` (proposed). Plants: `IPA-PEJOMPONGAN1`, `IPA-PEJOMPONGAN2`, `IPA-PULOGADUNG`.

8. By 30 November, Sudin SDA tests the Kali Item pump-house gate that jammed in January, clears drains at the 60 flood-prone points, and inspects the Banjir Kanal Barat embankment, reporting defects to BBWS Ciliwung-Cisadane

PARTIALLY CONFIRMED | SKEPTIC · EMERGENCY · HISTORIAN | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin SDA Jakarta Pusat, with the kelurahan; BBWS Ciliwung-Cisadane consulted	30 Nov 2026	Existing operations and maintenance lines	A jammed gate or a weak dike found at 3 a.m. in February

On 22 January 2026 the gate from the Kali Item pump house to the Sunter jammed and Serdang flooded, with Kali Item fed by overflow from Kali Sentiong, while the station's three 2,000 L/s pumps ran. Sudin SDA fixed it; test it before December. Satpol PP's 2024 list has 60 flood-prone points in Central, most in Kemayoran (Serdang four), Tanah Abang (Bendungan Hilir six), Johar Baru, Senen, and Cempaka Putih: clear the drains there first. Walk the Banjir Kanal Barat embankment from Latuharhary to Karet and Petamburan with sandbags staged, and report defects in writing to BBWS Ciliwung-Cisadane, which owns it. Province action JK-08 covers the power to the pumps.

* Suggested formulation: check with a health worker before sharing.

Corrections: gate crews and warnings are Dinas SDA's and BPBD's, not the kelurahan's; Sudin SDA inspects the dike, BBWS repairs it. The 60 points are approximate (Satpol PP's coordinates fall in their stated kelurahan about three times in four).

9. By 1 December, Pasar Jaya and Bulog open SPHP rice stalls at Pasar Senen and Pasar Cempaka Putih, Sudin Kesehatan tests refill-water depots for E. coli and posts the results, and PKK cadres help elderly cardholders book subsidised food

PARTIALLY CONFIRMED | FOOD SUPPLY | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin KPKP Jakarta Pusat, with Pasar Jaya, Bulog DKI, Sudin Kesehatan, and PKK cadres	1 Dec 2026	Existing stock and staff; depot tests from the sudin's lines, against a lab quote	Record rice prices where a cheaper channel exists; diarrhoea from refill water as sources degrade

The El Niño food signal here is weak: Central's average for IR-I rice was Rp16,516/kg in October 2026, about 4% above a year earlier, and chili rose about as much from August to December 2025, a neutral year. In Central, the poor buy plates, not kilos: kos renters without kitchens eat from warteg, and 97,068 households drink refill water. So watch the water. Satpol PP closed refill depots in South and West Jakarta on 10–11 December 2025, after E. coli was found in a South Jakarta depot, and only 22 of DKI's 2,541 registered depots held a hygiene certificate; no testing in Central was found. Test depots in Johar Baru, Kemayoran, and Tanah Abang and post the result at each. SPHP rice sells at Rp12,500/kg; no stall at Pasar Senen or Cempaka Putih was found. Subsidised food (*pangan bersubsidi*) is booked online the day before, from 07:00 to 17:00, or the same day from 14:00 to 17:00; PKK cadres can help elderly KLJ holders book (province action JK-09).

Corrections: Info Pangan Jakarta publishes daily, but the market-level Senen figure (Rp20,000/kg) could not be reproduced and is left out of the triggers. No source says whether someone may book for another person. Permenkes 43/2014 as the depot standard was not confirmed.

WHAT THE PROVINCE DOES FOR CENTRAL JAKARTA — WRITTEN ONCE

These items are city-wide, so they are written once in the province file (`jakarta-province-*`, code JK) and not priced here.

* Suggested formulation: check with a health worker before sharing.

- **JK-01, the decree.** BMKG's Awas trigger has fired for Central Jakarta, but DKI had declared no status by 15 October. A Keputusan Gubernur declaring siaga darurat kekeringan lets BTT be shifted (by pergeseran) into water lines and opens a request for BNPB Dana Siap Pakai (Perban BNPB 4/2020); only tanggap darurat opens BTT's direct release.
- **JK-02, the line on every notice:** "tutup wadah air, kuras dan sikat seminggu sekali". **JK-03**, posted tanker schedules and "boil before drinking" labels. **JK-04**, PAM Jaya and PJT II publish the Jatiluhur level at which Jakarta's raw water is cut; for Central that number decides Pejompongan.*
- **JK-05, trigger cash:** one rule, Rp300,000 once per household per declared status, at most twice a season, through Bank DKI, after a written BPKD and Inspektorat opinion.
- **JK-06 to JK-09:** the dengue and leptospirosis clinical alert, same-day smog and heat alerts, the PLN rule for pump power, and SPHP rice outlets. **JK-10 to JK-12**, asks to central government: rice aid for January–March 2027, Dana Siap Pakai, and Wolbachia. This briefing adds Cempaka Putih and Johar Baru, the 1st and 5th kecamatan for 2025 incidence, as candidates for 2027; nothing Wolbachia does will reach this season.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal.

Action	Wali kota	Sudin Kesehatan JP	Puskesmas kec.	Jumantik & PKK cadres	BAZNAS DKI	RSUD & RSCM	Sudin Gulkarmat JP	Sudin Citata JP	BPBD DKI	Kelurahan & RT	Sudin Sosial JP	Mosques & community groups	PAM Jaya	Sudin SDA JP	Sudin KPKP JP	Pasar Jaya & Bulog
1. Container rounds and drums, Cempaka Putih and Johar Baru		**A**	**R**	**R**	**R**					**C**			**I**			
2. Dengue triage and referral		**A**	**R**			**R**										
3. Heat and smog check-ins		**C**	**A**	**R**								**R**				
4. Extinguishers and night rounds	**I**						**A**			**R**		**C**				
5. Basement letters on the canal	**I**							**A**	**R**					**C**		
6. Named shelters and the trigger	**I**								**C**	**A**	**R**	**R**				
7. Plant-cut rule, kampung first	**I**								**C**	**R**			**A**			
8. Gates, drains, and the dike									**I**	**R**				**A**		
9. SPHP stalls, depot tests, food booking		**R**		**R**						**C**					**A**	**R**

What the chart shows: Sudin Kesehatan and the puskesmas carry the three actions with the most lives in them (1 to 3), and the kelurahan and RT heads are responsible in five. Not shown as columns: building managers (responsible on 5), BBWS Ciliwung-Cisadane (consulted on 8), and Dinkes DKI (consulted on 2). Only action 1 needs outside money, and only for drums.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR

Rp19.8 m (~US$1,100): 100 drums

TARGET

Rp49.5 m (~US$2,760): 250 drums

CEILING

Rp99.0 m (~US$5,520): 500 drums

LARGEST UNCERTAINTY

How many households in Cempaka Putih and Johar Baru store water open; no count exists until the November rounds

Floor = 100 households × Rp198,000 = Rp19.8 m; target 250 = Rp49.5 m; ceiling 500 = Rp99.0 m. These are judgment sizes, not divisions of a published total; the money is released only against containers the jumantik count, and F01 could rightly be zero. Rate: JISDOR Rp17,948 per

* Suggested formulation: check with a health worker before sharing.

US$ (15 October 2026). **All of it is readiness money; none is committed.** The target fell 95% in verification, from the panel's Rp1,060.8 m: the Rp240 m heat-round stipend would double-pay cadres the province already pays; the Rp240 m for 600 extinguishers duplicates Gulkarmat's budgeted programme; the Rp208.8 m for "shelter kits" used the province's water-kit price (a drum and two jerrycans) for something else; the Rp75 m of referral cards was priced by assumption; and the drums fell from 1,500 to 250 because Central is mostly piped and no source counts open storage. Not counted: the province trigger-cash line JK-F01; tankers PAM Jaya and BPBD deliver free; PAM Jaya and TP PKK's free tanks; Gulkarmat's extinguishers. **Public money:** the 2027 APBD ceilings were fixed when the KUA-PPAS was signed on 13 August 2026, and the RAPBD 2027 (Rp82.89 tn) was tabled on 13 October. None of these actions is a new APBD 2027 line. Public money can come only by reallocation within existing suku dinas lines during the deliberations, from the 2026 BTT on a declared status (by pergeseran under siaga darurat), from the APBD-P 2027, or from BNPB Dana Siap Pakai.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
BAZNAS (BAZIS) DKI, handing over through the puskesmas jumantik of Cempaka Putih and Johar Baru	One lidded 160 L drum, with a named custodian, for each household the rounds find storing water open (action 1)	Rp19.8 m / 49.5 m / 99.0 m	Pre-positioned stock	100 / 250 / 500 households × Rp198,000 (undated retail; release against a supplier quote). Camino Verde: −29.5% infection through mobilisation, about US$29,600 per DALY; targeting only	Partially confirmed

The funder's one thing: Central Jakarta is the best-served city in this set and has the fewest recorded deaths, so the right grant here is small, and money above the ceiling does more in North, West, or the Thousand Islands. Do not fund post-fire relief: Sudin Sosial, BPBD, PMI, and BAZNAS were delivering meals within hours of the June 2026 fires. The cheapest dengue rupiah for Cempaka Putih is Wolbachia (modelled at under US$1,500 per DALY in dense Indonesian cities; Brady et al., BMC Medicine 2020), and it cannot be spent this season: put the influence behind the 2027 roll-out (JK-12).

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives, money, or the window here. Cards 1 to 5 are province-wide (written once as JK-X01

* Suggested formulation: check with a health worker before sharing.

to JK-X05); cards 6 to 9 are Central Jakarta's own, and card 9 is also written once for the province as JK-X11.

Do not stand the response down when the rains return

CONTRAINDICATED

The first heavy rain is the handover, not the end. Water stored for the drought becomes breeding stock within one to two weeks, and DKI's dengue usually peaks in March to May. Central's canal floods come in January and February, and Kebon Kosong burned on 21 January 2025 and flooded eight days later.

Instead: keep the rounds, triage, check-ins, and shelters running to March 2027; stand down on falling dengue cases, not on rainfall.

Do not make fogging the visible dengue response, and do not bulk-buy temephos without a bioassay

CONTRAINDICATED

Jakarta *Aedes aegypti* resist permethrin, the fogging class (Hamid et al., PLoS ONE 2017). Cempaka Putih fogs homes routinely, but its own officials call household nest-clearing (PSN) the most effective step, and nothing has measured what the fogging adds.

Instead: fog only on a case investigation; count containers found and fixed (action 1); choose any larvicide after a WHO bioassay.

Do not tell households to "store water" without "cover it, drain and scrub it weekly"

CONTRAINDICATED

Aedes eggs stick to container walls and survive draining. Storage advice before a plant cut, without the rest of the sentence, multiplies breeding sites in the kecamatan with Jakarta's highest dengue rate.

* Suggested formulation: check with a health worker before sharing.

Instead: every notice and tanker drop carries the whole line (province action JK-02).

Do not present tanker, well, or refill-depot water as drinking water*

CONTRAINDICATED CORRECTED

No tanker water-quality data was found, and drums filled from tankers sit for days. The same holds for well water and for water delivered by boat. Refill water is not safe by default either: Satpol PP closed depots in South and West Jakarta in December 2025, after E. coli was found in a South Jakarta depot.

Instead: label it "air bersih, bukan air minum: rebus dulu"; test the depots (action 9).

Do not answer smog with road spraying, mist generators, cloud seeding, or odd-even rules, and do not spend drought water on misting

CONTRAINDICATED

An ITB air-quality expert said in August 2023 that water mist "did not work well" in India; each generator uses about 500 L of water and 2,000 W of power, in a drought, and no measured result from Sudirman–Thamrin was published. Cloud seeding needs clouds that a dry El Niño season does not bring. Odd-even plate rules are a traffic measure, not protection for the people breathing the air on a bad day.

Instead: protect people indoors on bad days (action 3) and target the sources.

Do not run flood warnings for Kemayoran, Johar Baru, and Cempaka Putih off the Manggarai gauge alone

CONTRAINDICATED CORRECTED

Manggarai measures the Ciliwung. East Central floods from rain, local drains, and pump gates: on 22 January 2026 Serdang flooded because the Kali Item pump-house gate jammed, and in late February 2020 the public works minister blamed drainage capacity, not a river, when about 24 Central kelurahan went under.

* Suggested formulation: check with a health worker before sharing.

Instead: a BMKG rain nowcast plus a named crew at each gate and pump (action 8); Manggarai for the canal kelurahan only (actions 5 and 6).

Do not tell people to go to "the official evacuation site" or "the kelurahan office"

CONTRAINDICATED

Satu Data Jakarta's 61 flood evacuation sites include none in Central Jakarta. In January 2026 the people of Karet Tengsin went to an RPTRA and a mosque hall. A warning that sends people to a site that is not there, at night, in water, costs time they do not have.

Instead: name the site, its address, and its keyholder in each kelurahan (action 6).

Do not send uniformed teams with name lists into the kampung, or raid street sleepers, ahead of floods or heat

CONTRAINDICATED CORRECTED

In July 2026, 69 rail-side families from Pasar Senen moved into Hunian Senen with six months' free rent and no terms after that; residents told CNA they feared being moved again. On 8 April 2026 a joint team of Satpol PP, SDA, the army, and the police removed 13 buildings on the Krukut bank in Petojo Utara. Street sleepers under the Tanah Abang pipe overpass were raided and sent to a social home in 2022. The risk is that a clipboard reads as the next list, and people stop opening the door.

Instead: send the jumantik and mosque volunteers people already let in; keep counts, not names; reach street sleepers without uniforms.

Do not hand out drums, tanks, or extinguishers without a named custodian and a check date

CONTRAINDICATED

An unlidded or unscrubbed drum is a breeding container, the very thing the dengue rounds look for. An extinguisher nobody checks is a false comfort, and no source says who refills the RT extinguishers.

Instead: log every item to an RT custodian with a check date, and check it on the rounds (actions 1 and 4).

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Feb 2007	Jakarta flood, in a weak El Niño; a canal break near Petamburan in search results only	No Central count found (48 in DKI; Bappenas)	Flood-control works planned
Aug 2011	Kalimalang canal gate breaks; IPA Pejompongan stops (La Niña)	More than 200,000 customers without water	Operator disclaimed responsibility
Jan 2013	Banjir Kanal Barat dike breaks at Jl. Latuharhary; Thamrin and the Palace flood (neutral)	3 dead: 1 in Petamburan in BPBD's kelurahan table, and 2 cleaners drowned in a UOB Plaza basement, outside BPBD's count and not on the province's list	Repair still under sandbags in Jan 2014
Jan 2014	Canal flood, Petamburan 50–200 cm, Karet Tengsin to 250 cm (neutral)	4,251 displaced in the two kelurahan; deaths not recorded	Nothing found
Feb 2015	Flood in Johar Baru (El Niño onset)	1 dead in BPBD's record	Nothing found
Jan 2020	New Year flood (El Niño under ONI v6); Karet Tengsin 71–150 cm	No Central death in BPBD's record	Nothing specific
Feb 2020	Rain flood in about 24 Central kelurahan; drainage, not a river	No Central death in BPBD's record	Nothing specific
Aug 2023	Kampung fire, Kebon Jahe Kober, Gambir (El Niño dry season)	2 dead, 154 buildings	Extinguishers per RT (Ingub 5/2025)
Apr 2024	PJT II raw-water leak to Pejompongan (El Niño ending)	20 Central kelurahan without water for days	Repaired 4–8 Apr

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Jan 2025	Kemayoran Gempol fire, Kebon Kosong; flooded eight days later (neutral)	More than 500 houses; about 1,700 displaced	Nothing found
Oct 2025	IPA Pulogadung outage (neutral)	23 Central kelurahan cut overnight	Nothing found
Dec 2025	Office fire from battery storage, Cempaka Baru (neutral)	22 dead	Not a seasonal hazard; see blind spot
Jan 2026	Kali Item gate jams, Serdang floods; Karet Tengsin evacuates (neutral)	No deaths; 50 sheltered off-list	Gate repaired
Jun 2026	Three night fires in five days: Kebon Kosong, Tanah Tinggi, Cideng (El Niño)	1 dead (Cideng); 334 houses	Relief within hours

The recurrence nobody has noticed: Central Jakarta's flood deaths come from its kampung and its office towers alike. BPBD's kelurahan tables record one in Petamburan, on the canal, in 2013 and one in Johar Baru in 2015. The government's own canal broke in 2007 and again in 2013, and that January two cleaners drowned in a basement two blocks from the Palace; those two deaths are outside BPBD's count and missing from the province's list, so Central's own count is probably too low. Its fires kill at night, in lanes too narrow for a truck, and a kelurahan that has just burned, as Kebon Kosong did in January 2025, has nowhere dry to go when the water comes. ENSO phases follow NOAA's ONI (ERSSTv6, five-season rule): January 2025 is neutral, and June 2026 is El Niño (the 2026 episode starts in MAM 2026). City-wide events (1996, 2002, 1997–98 rice, 1998, 2004, and 2024 dengue) are in the province file, and so are the three plant cuts that crossed city lines (2011, 2024, and 2025: JK-E17 to JK-E19); the rows here keep only Central's part.

WHERE THE EXPERTS DISAGREE — UNRESOLVED

- **Enforce the groundwater ban on office towers now** (the governor said on 13 March 2026 he will reprimand offices still pumping, with no deadline) versus **schedule switchovers after March** (Economist: every tower that joins PAM Jaya mid-drought draws on the Pejompongan mains the kampung already share). The capacity concern is reasoned, not sourced. This briefing does not take a side; it asks that any building switching this season install its own storage first.

* Suggested formulation: check with a health worker before sharing.

- **Heat is the bigger killer** (the modelled 25) versus **dengue is the one we can see** (2 deaths in 2025, but the worst incidence in Jakarta). The panel ranked the dengue actions first because they reach people with a proven channel before the peak; the heat number is a population share of a province figure, not a located risk.

WHAT NOBODY COVERED

BLIND SPOT

The deadliest event in Central Jakarta's record is not on the El Niño list at all: 22 people died on 9 December 2025 when battery storage caught fire in an office building in Cempaka Baru. No lens covered fire safety in buildings, as distinct from kampung, and nothing in this briefing addresses it. Nor did any lens count the people a flood or heat wave reaches first in Central: the street sleepers of Senen, Tanah Abang, and Pasar Baru, and the kos renters of Johar Baru. Sudin Sosial reached 102 people in January–February 2025 (search result only), and no source counts the rest. Finally, the panel did not establish whether Central's few wells matter: a June 2024 Dinas SDA estimate of about 6 RT and 70 households at risk of water shortage in Central was seen only in a search result.

HOW TO READ THIS

METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale. Here the only row is the whole province (Jakarta Raya, 10.7 million people), so Central Jakarta's figure is a population share. The El Niño projection covers *heat only*; drought, flood, fire, smog, and dengue are additional to it and are carried here by the historical record rather than by a published number.

HOW THIS BRIEFING WAS PRODUCED

METHODOLOGY

- **Scope.** The location was taken as given: Kota Administrasi Jakarta Pusat, DKI Jakarta (Kemendagri 31.71; BPS 3173; 8 kecamatan, 44 kelurahan; 1,032,236 people, BPS 2026 projection). Climate Impact Lab impact region: GADM IDN.7_1 "Jakarta Raya", the whole province. Its row (about 260 excess heat deaths, September 2026 – February 2027; 147 in December–February) was scaled by population share (9.7%) to about 25, our arithmetic. Kelurahan is the finest unit named; RW appear only in text from a source and are never ranked; dengue is shown no finer than kecamatan.

* Suggested formulation: check with a health worker before sharing.

- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline. The global total covers June 2026 – February 2027; country and province figures cover September 2026 – February 2027. It covers heat only.
- **Expert panel.** Eight simulated lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst), plus a status researcher for the dated readings and plant outage lists, researched Central Jakarta in parallel from web sources, to a fixed brief carrying the set's verified facts (PLAN.md log) and the local tables below. Province facts were reused, not re-researched.
- **Local evidence.** From the project GIS base (`projects/elnino-jakarta/gis/jakarta_base.gpkg`), built from Satu Data Jakarta: BPBD flood events by kelurahan (2013–2024), Dinkes dengue by kecamatan (suspected cases 2024, incidence 2025), Dinas SDA subsidence benchmarks (Central medians 3.2, 3.0, and 2.9 cm a year in 2023–25), puskesmas, Satpol PP flood-prone points, and flood evacuation sites. Read for this briefing through the portal's own API: PAM Jaya customers by city (2025), household heads by drinking-water source (DPPAPP, 2025), floodgates (Dinas SDA), and fire posts. Satu Data is a single-page app, so its links open the portal rather than the table.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias. Contradictions were kept. Actions were ranked by expected lives saved per unit of effort, each was given a payer or marked unfunded, and the placements were reconciled against the ranked list. City-wide items were left to the province file.
- **Verification.** Four verifier agents checked all 13 local recommendations, the funding envelope, and the record: dengue, heat, and the custodian card; fire, floods, shelters, and the three other local cards; water and food; and the funding envelope (recipients, duplication, and scale). Their corrections are shown under each action.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.
- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not searchable this run: the page renders "Number of Adaptations: 0" until a country filter is applied in a browser, and the dataset is behind a download form. No action carries a checked precedent from it; this is unsearched, not "none exists".
- **Health wording.** Passages where a wording error could hurt someone (dengue danger signs and care, heat, fire safety, and drinking-water treatment) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources,

* Suggested formulation: check with a health worker before sharing.

not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.

- **Rules.** No cost is derived by dividing a published total, and no local figure is invented. One exchange rate for the set: JISDOR Rp17,948 per US$ (Bank Indonesia, 15 October 2026). Every changing reading carries its date. Indonesian text for every action, funding line, and event is in `central-jakarta-pusat-id.json`, not yet reviewed by a native speaker.
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. Run-specific gaps: BMKG's dasarian III warning (not found) and BMKG's own September bulletin (no longer online); the Jatiluhur cut level; whether Central households store water open, and how many; hydrant locations; who refills RT extinguishers; Prolanis lists for Central; a South-or-Central location for the Manggarai gate (OSM puts it in Pegangsaan, Menteng; the city polygons put it just across the line in South Jakarta); the 2007 and 2014 Central death counts; the drum price, an undated retail listing. Sites that returned 403 or timed out: Tirto, wartaekonomi, RRI. Claims seen only in search results are marked as such.
- **Revised 2026-10-15 after the set audit** (fixes applied: the 2013 flood toll, with Petamburan's death in BPBD's table and the two UOB Plaza deaths outside it, and the hero line, record row, and recurrence note to match; the 2020 New Year toll set to 0; the Katulampa trigger at Siaga 2 (150 cm) and one lead time set-wide; BMKG's September and October *Awas* lists; ENSO labels against ONI v6; the 2011, 2024, and 2025 plant cuts referenced to the province events JK-E17 to JK-E19, and card 9 to JK-X11; Do not cards 4 and 5 matched to the province cards; action 5's kelurahan corrected to those the canal borders; an unsupported Central tank handout and an unconfirmed SPHP rename deleted; the Cideng victim, the Kebon Kosong time, the E. coli finding, and the jumantik and Dasawisma wording corrected; action 3's source of funds given as APBD (existing line); Latuharhary spelled one way; UK spelling).
