East Jakarta, Jakarta

East Jakarta's wells have held so far this dry season, but its rivers have not. Its recorded flood deaths are older people who died of cold in their own flooded homes. First, name every frail resident on the riverbanks and move them when the gauge upstream rises, not when the water is already in the house.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
Jakarta Raya (whole province, one row)	~75 for East Jakarta, scaled (DKI: 260)	6-month, Sep 2026 – Feb 2027	Ciliwung, Cipinang, and Sunter floods; dengue; heat

11/11 East Jakarta recommendations checked. 2 confirmed as written, 9 corrected, 0 unverified; 5 province-wide Do not cards carried from the province file. **The funding target fell 62% in verification**, from the panel's Rp602 m to Rp226 m. East reported no dry wells in 2026, and its flood deaths are older people dying of cold, so 1,057 water kits became one blanket per named frail elder. Exposure: Climate Impact Lab, *451,000 at Risk*, Sep 2026, pre-peer-review, heat only. East Jakarta's ~75 is our arithmetic, not an Impact Lab finding: 260 × 3,083,988 ÷ 10,669,702 = 75.2 (Dec–Feb: 147 × the same share = 42.5).

EXECUTIVE SUMMARY — AT A GLANCE

6.25°S 106.90°E, Indonesia · BPS boundaries via OCHA COD-AB; OpenStreetMap contributors (ODbL); Natural Earth

- **The risk.** Three older people died of cold in Cipinang Melayu on 1 Jan 2020; it flooded three times in 2026 and has no listed shelter.
- **First action.** By 15 Dec, name every frail resident on the riverbanks, with two helpers who move them on the upstream gauge.
- **The money.** Rp101 m / Rp226 m / Rp406 m (US$5.6k / 12.6k / 22.6k); top placement: lidded drums for dengue rounds.
- **Do not.** Do not tell Kampung Melayu and Bidara Cina the sodetan protects them.

* Suggested formulation: check with a health worker before sharing.

East Jakarta (Kota Administrasi Jakarta Timur, Kemendagri 31.75; BPS 3172) is the most populous of Jakarta's five cities: 3,083,988 people (BPS, SP2020-based 2026 projection), ten kecamatan, and 65 kelurahan. Its poverty rate is 3.94% (BPS, March 2025). The Ciliwung runs down its western edge, past Gedong, Balekambang, Cililitan, Cawang, Bidara Cina, and Kampung Melayu. The Cipinang and the Sunter cross its middle, and the Cakung drain its north-east. The Kalimalang canal carries raw water from Jatiluhur to PAM Jaya's Buaran plants in Duren Sawit. The mayor is appointed and has no budget of its own: the province holds the money and PAM Jaya runs the pipes. So this briefing names the city offices (suku dinas) that do the work and leaves city-wide items to the province file (`jakarta-province-*`). It is written as a proposed draft (*draf usulan*) for the two-year review of the RPB 2023–2027 (Pergub DKI 1/2024).

The season. An El Niño dry season that is already here: it has dried shallow wells and the ends of the pipe network and held smog over the city; it is expected to delay and shorten the rains; and it does not make the January–February floods less likely. Each briefing therefore covers one season, from dry wells, smog, and heat now, through dengue bred in stored water and the floods, to March 2027.

What is different here. In East Jakarta the dry half of that season has been mild so far. BMKG put West, Central, East, and North Jakarta and Kepulauan Seribu at *Awas* for 11–20 September (BPBD DKI, via Kompas TV, 14 Sep); South Jakarta was not listed. BMKG's September bulletin is no longer online, and one report differs. East is not on the October dasarian II list (bmkg.go.id). The city reported no dry-well complaints, and no tanker drops in East were found for August to October. So this briefing leads with the floods, dengue, and heat, and keeps one action for the wells that failed here in 2019.

WATER AND AIR STATUS	READING	DATE
Jatiluhur reservoir (PJT II), most of Jakarta's raw water	90.73 m, about 16 m below its normal top of about 107 m; the level at which raw water to Jakarta is cut is **not published**	15 Oct 2026, 07:55 WIB
BMKG drought early warning, East Jakarta	**Not listed** (no warning). It was at *Awas* on 11–20 Sep. Dasarian III not yet issued on 15 Oct	Dasarian II, Oct 2026

* Suggested formulation: check with a health worker before sharing.

WATER AND AIR STATUS	READING	DATE
PAM Jaya outage reaching East Jakarta	IPA Pulogadung (`IPA-PULOGADUNG`) stopped for PLN works, 22:00 to 02:00: 53 kelurahan in Central, East, and North Jakarta, 311,528 customers (Central 23). East areas named: Pisangan Timur, Rawamangun, Pulo Gadung, Cakung Barat, and Penggilingan; the rest of the 53 are not named in the source by city. Recovery up to 48 hours. The 5–6 Jun 2026 Pejompongan outage reached no East kelurahan	31 Oct – 1 Nov 2025 (latest found)
Tanker drops (reported, not complete)	None found in East Jakarta. The deputy mayor said there were no complaints and kept tankers on standby	16 Sep 2026
Worst air reading found	No dated reading from an East Jakarta station in 2026. DKI4 Lubang Buaya read ISPU 101, "tidak sehat"; DLH blames nearby tofu and charcoal works, so it overstates the city's air	15 Sep 2023
Flood warning gauges	Ciliwung: Depok at Siaga 1 at 03:00 reached Balekambang 1.5 m deep by 07:15, about 4 hours (4 Mar 2025). Lead time: about 6–9 hours from Katulampa to Manggarai, and about 4–6 hours from Depok (BPBD DKI floodgate data). Sunter Hulu and Cipinang Hulu have BPBD gauges; their thresholds are not published	Read daily from November

Dengue by kecamatan (Dinkes DKI via Satu Data Jakarta): **suspected** cases in 2024 (the column is `jumlah_suspek`), Duren Sawit 504, Ciracas 419, Jatinegara 391, Matraman 349, Cakung 330, Pulogadung 302, Kramat Jati 276, Pasar Rebo 238, Cipayung 183, Makasar 135 (East total 3,127). Incidence in 2025 per 100,000 (rank among DKI's 44 kecamatan): Cakung 103.4 (13th), Matraman 97.4 (16th), Pasar Rebo 91.8 (17th), Pulogadung 90.7 (19th), Kramat Jati 88.4 (22nd), Ciracas 82.5 (24th), Jatinegara 74.3 (26th), Duren Sawit 52.8 (35th), Cipayung 49.0 (36th), Makasar 46.0 (41st). DKI's top three are Cempaka Putih, Cengkareng, and Kelapa Gading. PMI Jakarta Timur reported 1,951 cases in East from January to mid-June 2026, 360 in Cakung (no data source named; no deaths given). PAM Jaya publishes no service zones, and its coverage figure (about 82%, July 2026) has no stated denominator, so this briefing does not estimate how many households are on wells.

WHAT THIS PLACE SHOULD DO

RANKED

Ranked by expected lives saved per unit of effort before and through the peak. Backing lenses are shown per action. Convergence was checked

* Suggested formulation: check with a health worker before sharing.

for shared bias. Each action carries the RPB's columns: owner, place, target, date, and source of funds.

1. By 15 December, name every bedridden or frail older resident, RT by RT, in the seven riverbank kelurahan, each with two named helpers who move them when the gauge upstream rises, not when water is 150 cm in the house

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · FRONTLINE · PUBLIC HEALTH | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Timur, with the lurah and RT heads, the puskesmas, PKK and Dasawisma cadres, and PMI Jakarta Timur	Lists and helpers by 15 Dec 2026; in force to March 2027	Staff and cadre time; Rp75 m at target for blankets (F02)	Older people dying of cold in flooded homes, the way East Jakarta's verified flood deaths happened

The kelurahan are Cipinang Melayu, Kampung Melayu, Bidara Cina, Cawang, Cililitan, Balekambang, and Gedong. On New Year's Day 2020, three older residents of Cipinang Melayu, M Ali (82), Siti Hawa (72), and Willi Surahman, died of hypothermia in their flooded homes (BNPB's list). On 13 January 2014 a 32-year-old man from Kampung Pulo, who had asthma, died of cold while being evacuated, and a 60-year-old in Bidara Cina died of illness. BPBD's kelurahan tables record none of these five deaths. Cipinang Melayu flooded again in January and March 2026, and on 22 January its RW head said people would go to the Universitas Borobudur campus only above 150 cm; the water was 120 cm at the bank. In Kampung Melayu, residents ride floods out upstairs on the RT head's word ("still safe" at 110 cm on 17 April 2026). So the list is of people who cannot climb or keep warm, and the trigger is the gauge: Depok at Siaga 2 or Katulampa at Siaga 2 (150 cm) on the Ciliwung, and Sunter Hulu or Cipinang Hulu at Siaga 2. At Balekambang on 4 March 2025, water reached 1.5 m about four hours after Depok hit Siaga 1. Each named person gets a blanket kept at the shelter. Those who stay upstairs get drinking water, a lamp, and a check-in by phone.

Corrections: the BNPB list gives hypothermia without "suspected"; Willi Surahman's age is not given. The 22 January 2026 water came from the Sunter, not the Cipinang. The RW head said that PMI and Dinsos "usually help, none yet", not that no aid comes. Kebon Pala RT 13/RW 04 is part of Kelurahan Kampung Melayu (Jatinegara), not Kelurahan Kebon Pala in Makasar. The lead time is about 6–9 hours from Katulampa to Manggarai, and about 4–6 hours from Depok; Kampung Melayu and Balekambang are upstream of Manggarai, so they have

* Suggested formulation: check with a health worker before sharing.

less. The Katulampa trigger is Siaga 2 (150 cm), not Siaga 1 (200 cm), to keep that margin. The Sunter Hulu and Cipinang Hulu thresholds are not published. No count of frail elders by kelurahan exists, so the list itself is the first output. Lists stay with the RT and the puskesmas; only counts go to BPBD.

2. By 30 November, release rescue boats on the gauge without a written request in five kelurahan; by 15 December, sign written shelter agreements on the Cipinang and Sunter, starting with Universitas Borobudur

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · ECONOMIST · SKEPTIC | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Timur, with Sudin Gulkarmat (fire and rescue), the lurah, and the Wali Kota for the agreements	**Boats on standby 30 Nov 2026; four shelter agreements 15 Dec 2026**	**Boats and crews in existing budgets; Rp44 m at target for shelter water tanks (F03)**	**People trapped in rising water while a boat waits for paperwork; evacuees with nowhere named to go**

The five are Balekambang, Cawang, Bidara Cina, Kampung Melayu, and Cipinang Melayu. On 4 March 2025, a Balekambang resident reported that water reached 1.5 m by 07:15 with no evacuation, and that he was told to file a letter before he could borrow a rubber boat. A boat staged at the lurah office, released when the gauge reaches Siaga, needs no letter. The shelters: Satu Data's flood evacuation list puts East Jakarta's sites only on the Ciliwung side (Bidara Cina, Kampung Melayu, Cawang, Cililitan, Balekambang) plus Kebon Manggis and Cakung Barat. It lists none on the Cipinang or the Sunter, where Cipinang Melayu flooded in all ten recorded years of BPBD's 2013–24 record and Rawa Terate and Rambutan in nine. Universitas Borobudur already takes Cipinang Melayu's evacuees (265 families in January 2020; about 30 people at its mosque in January 2026), so the agreement makes a working arrangement official. Add at least one site each in Cipinang Muara, Rawa Terate, and Rambutan.

* Suggested formulation: check with a health worker before sharing.

Corrections: the Balekambang flood was 4 March 2025, not 3 March, and the boat account is one resident's. Jakarta Timur's fire service pledged 200 rubber boats for these kelurahan in 2014; the current BPBD and Gulkarmat fleet is not published. The tanks (F03) are released only for shelters with a signed agreement.

3. By 30 November, every puskesmas kecamatan triages dengue warning signs, with written same-day referral routes for Cakung, Pulogadung, Jatinegara, and Makasar, which have no RSUD

PARTIALLY CONFIRMED | PUBLIC HEALTH · EMERGENCY | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Timur; the ten puskesmas kecamatan; the RSUD and RSUP Persahabatan; Dinkes DKI consulted	**30 Nov 2026, with drills in December**	**Staff time and stock in existing budgets; not costed**	**Dengue cases becoming deaths in the peak, which usually comes in March to May**

Before March, East Jakarta can do little about how many people catch dengue; it can do a great deal about how many die. Indonesia's dengue case fatality rate fell to 0.42% in 2025, and Kemenkes's 2026 dengue circular (SE HK.02.02/C/861/2026) says deaths came mainly from patients reaching care too late. Use the Kemenkes clinical guidelines (PNPK): recognise the warning signs, monitor haematocrit, give fluids, refer early. East Jakarta's RSUD are Budhi Asih (Cawang, in Kramat Jati), Pasar Rebo, Kramat Jati, Ciracas, Cipayung, and Matraman, plus the special hospital RSKD Duren Sawit. Cakung, with East's highest dengue incidence in 2025 and the most cases in early 2026, has none: its hospital (RS Royal Batavia Cakung, begun in August 2025) is due by the end of 2027. Nor do Pulogadung, Jatinegara, or Makasar. Write their routes now: Pulogadung and Cakung to RSUP Persahabatan (Rawamangun) for warning signs; Jatinegara and Makasar to RSUD Budhi Asih. From January, after floods, the same alert covers leptospirosis: early doxycycline for fever after floodwater exposure (province action JK-06).*

* Suggested formulation: check with a health worker before sharing.

Corrections: the Cakung hospital's target moved from end-2026 to the end of 2027. RSKD Duren Sawit began as a mental-health and special hospital, so it is not a dengue route until its emergency department confirms. Persahabatan is a class-A Kemenkes hospital, so refer warning signs, not every fever. The 2026 count (1,951 to mid-June) names no data source and gives no deaths; no East dengue death for 2025–26 was found. Leptospirosis: Satu Data shows zero cases in East in 2024, which probably reflects under-ascertainment.

4. From November, run weekly cover-and-scrub rounds in Cakung, Matraman, and Pasar Rebo, East Jakarta's highest dengue incidence, and at every flood shelter, with lidded drums for households storing water in open containers

PARTIALLY CONFIRMED | PUBLIC HEALTH · PHILANTHROPIST · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Timur and the puskesmas, with jumantik and PKK cadres; BAZNAS (BAZIS) DKI buys the drums and TP PKK DKI delivers them	**270 households with drums by 15 Dec 2026; rounds weekly to March 2027**	**Rp107 m at target for drums (F01)**	**Stored water becoming the dengue peak**

Cakung (103.4 per 100,000), Matraman (97.4), and Pasar Rebo (91.8) had East Jakarta's highest dengue incidence in 2025, and Cakung had the most cases in early 2026. Rounds also cover every flood shelter, where water is stored for days. Where a round finds water in an open container, BAZNAS supplies a lidded 160 L drum (about Rp198,000, the province's shared unit cost). PAM Jaya and TP PKK give free 300 L tanks to simple households, mainly 2A1 and 2A2 customers (target 2,000 in 2026), so households that hold one are excluded. The best trial evidence is Camino Verde (BMJ 2015; Nicaragua and Mexico): community mobilisation without insecticides cut recent dengue infection in children by 29.5% (95% CI 3.8–55.3).

Corrections: Camino Verde mobilised households; it did not hand out lids, so the drums support the rounds rather than stand alone. PMI Jakarta Timur trained jumantik in July 2026, but along the Ciliwung, not in these three kecamatan. BAZNAS DKI has no recorded drum distribution, so the drums are sized to TP PKK DKI's largest one-day handout on record: 270 households (with PAM Jaya, North Jakarta, 15

* Suggested formulation: check with a health worker before sharing.

Apr 2026), one round at the floor and up to three at the ceiling. TP PKK DKI is the delivery partner: with PAM Jaya it handed out 520 free 300 L tanks in three rounds, Jan–Apr 2026 (270 in North in one day). Prices are undated retail listings: release money against a supplier quote. Province rule: action JK-02.

5. By 30 November, clear the Cipinang and Sunter secondary drains first, and stage the two new mobile pumps at the Cakung Drain gate in Rawa Terate and at Cipinang Melayu

PARTIALLY CONFIRMED | EMERGENCY · SKEPTIC · ECONOMIST | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin SDA Jakarta Timur, with the kelurahan; BPBD and PLN consulted	30 Nov 2026	Existing dredging and operations lines (reallocation within the suku dinas)	A repeat of the 2026 floods on the Cipinang and Sunter, where no shelter is listed

On 29 January 2026, Rawa Terate RW 05 flooded 50–100 cm because the Cakung Drain gate near PT Krama Yudha could not discharge at high tide; Sudin SDA had to bring three pumps after the fact. On 21–22 March 2026, the Cipinang, Cilangkap, and Sunter flooded 46 East Jakarta RT in ten kelurahan (16 in Ciracas, 6 in Cipinang Melayu; BPBD DKI, via Metro TV), and 696 people left their homes. Sudin SDA Jakarta Timur received two new mobile pumps (40,000 or 60,000 L/min) on 26 August 2026; stage them where the water came last time, before the rains.

* Suggested formulation: check with a health worker before sharing.

Corrections: the pump sites are this briefing's proposal; where the two pumps are now is not published. The 696 evacuees (201 families) appear to be East only, but the report does not say so. Rawa Terate's depth was 50–100 cm, not 1 m throughout.

6. From November, cadres call or visit Kartu Lansia Jakarta holders on days BMKG forecasts 34 °C or more, or when the nearest air sensor reads "tidak sehat"

PARTIALLY CONFIRMED | PUBLIC HEALTH · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
The puskesmas kecamatan, with PKK and Dasawisma cadres and RT heads; Sudin Sosial for the list	Call list ready 30 Nov 2026; calls to March 2027	Cadre time, already paid	Heat and smog deaths among isolated older people

Heat is the one hazard with a number: about 75 excess heat deaths for East Jakarta from September to February, by our scaling of Impact Lab's province row. Halim reached 34.5 °C on 15–16 March 2026, sixth highest in Indonesia that day. The smog is worsened by a dry El Niño season, not caused by it. East Jakarta's 52,270 Kartu Lansia Jakarta holders (2025) are a ready list of poor older people. Call on BMKG's daily maximum forecast, or when the nearest of the province's 111 SPKU sensors (udara.jakarta.go.id, JAKI) reads "tidak sehat" (province action JK-07). The call covers water, medicines, signs of heat illness, and from December the dengue warning signs.*

* Suggested formulation: check with a health worker before sharing.

Corrections: the draft used DKI4 Lubang Buaya as the trigger; DLH says its readings are skewed by nearby tofu and charcoal works, so it would fire for local reasons. The draft also used 43,317 "elders living alone" from the Sembako list; that table repeats the same figures for elders living alone and living with family, so the figure is dropped. Kartu Lansia is means-tested, not a list of people living alone. The evidence for check-ins (Ahmedabad, Hess et al. 2018) is from dry heat above 43 °C; treat this as a low-cost measure, not one with a proven effect here. How many days reach 34 °C, and so the call load, is not known.

7. From 1 November, send a tanker within two hours of any RT report of dry wells, starting with the 2019 hotspots in Bambu Apus and Munjul, and take PAM Jaya free-connection applications door to door there

PARTIALLY CONFIRMED | HISTORIAN · EMERGENCY · ECONOMIST | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Timur, with PAM Jaya and the kelurahan	**Rule in force 1 Nov 2026; dry RTs visited by 30 Nov**	**Water free (BPBD, PAM Jaya); connections from PAM Jaya's own budget, Rp35,000 refundable deposit**	**The wells that failed in 2019 failing silently if the rains come late**

In the 2019 dry season, 25 of 96 houses in one Bambu Apus RT ran dry (wells 12–15 m deep) and more than 50 families in a Munjul RW (wells 7–10 m), both in Cipayung; the province's Satgas Air Bersih, working with PAM Jaya, sent tankers within two hours of an RT or RW report. In 2026 the city has had no complaints: on 16 September the deputy mayor put tankers on standby, and on 17 September BPBD DKI called East's supply "still safe". But BMKG expects the rains late, and Bambu Apus and Munjul are in the five kecamatan that IPA Buaran III (3,000 L/s, opened 6 May 2025) was built to serve. Make the two-hour response a rule through 112, and pair every dry RT with PAM Jaya's free-connection offer (homes of 70 m² or less, Rp35,000 refundable deposit).

* Suggested formulation: check with a health worker before sharing.

Corrections: the 2019 account is a retrospective published in June 2020, and the two-hour supply was the Satgas Air Bersih's (a provincial task force working with PAM Jaya), not BPBD's, so it is a 2019 practice, not a standing rule. The wells failed in the 2019 dry season, before the 2019–20 El Niño began (ONI v6 ASO 2019 +0.3; the episode runs from SON 2019), with a strong positive IOD. Buaran III's 31 kelurahan are not named, so whether its mains reach Bambu Apus and Munjul is unverified. Province rule: action JK-03. Plants: `IPA-BUARAN` (Buaran I to III on one site) and `IPA-PULOGADUNG` (the north-east kelurahan).

8. By 1 December, add flood-week pickup dates for subsidised food, with booking help at the RW post, and post the SPHP rice outlets in Cipinang Melayu, Kampung Melayu, and Bidara Cina

PARTIALLY CONFIRMED | FOOD SUPPLY | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin KPKP Jakarta Timur, with Pasar Jaya and the kelurahan; Bulog DKI consulted	**1 Dec 2026**	**Staff time**	**Cardholders in flooded RTs missing their subsidised food in the weeks they most need it**

East Jakarta holds the national rice hub, Pasar Induk Beras Cipinang. In September 2026 about 1,500 t a day was arriving there, and on 2 October medium rice was down to about Rp13,500/kg at distributor level. The risk for households is not supply but access. DKI's subsidised food (*pangan bersubsidi*) is only for cardholders, who bring the card, KTP, and KK: they book online and pick up the next day, or register on the spot and pick up the same day between 14:00 and 17:00. A family in a flooded RT may manage neither. So Pasar Jaya adds pickup dates in flood weeks and the RW post helps people book. SPHP rice is a separate Bulog channel open to anyone, at most Rp12,500/kg in Java. The 30 kg rice aid runs October to December only, so it ends as the floods begin (province ask JK-10).

Corrections: as well as the online queue with next-day pickup, there is a same-day window (on-the-spot registration and pickup, 14:00–17:00); the draft's walk-in slots became extra flood-week dates and booking help. Rp13,500 is a distributor price, not retail. No 2026 list of SPHP outlets in East Jakarta was found, which is the point of posting one. No daily PIBC stock series is published.

WHAT THE PROVINCE DOES FOR EAST JAKARTA — WRITTEN ONCE

These items are city-wide, so they are written once in the province file (`jakarta-province-*`, code JK) and not priced here.

* Suggested formulation: check with a health worker before sharing.

- **JK-01, the decree.** BMKG's *Awas* trigger fired for East Jakarta on 11–20 September but not in October dasarian II; DKI had declared no status by 15 October. A Keputusan Gubernur declaring siaga darurat kekeringan lets BTT be shifted (by pergeseran) into water lines and opens a request for BNPB Dana Siap Pakai (Perban BNPB 4/2020); only tanggap darurat opens BTT's direct release.
- **JK-02, the line on every notice:** "tutup wadah air, kuras dan sikat seminggu sekali". **JK-03**, posted tanker schedules and "boil before drinking" labels. **JK-04**, PAM Jaya and PJT II publish the Jatiluhur level at which Jakarta's raw water is cut. *
- **JK-05, trigger cash:** one rule, Rp300,000 once per household per declared status, at most twice a season, through Bank DKI, after a written BPKD and Inspektorat opinion.
- **JK-06 to JK-09:** the dengue and leptospirosis clinical alert, same-day smog and heat alerts, the PLN rule for pump power, and SPHP rice outlets. **JK-10 to JK-12**, asks to central government: rice aid for January–March 2027, Dana Siap Pakai, and Wolbachia (this briefing proposes Cakung and Matraman as East candidates for 2027; no Wolbachia work in East was found).

* Suggested formulation: check with a health worker before sharing.

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR

Rp101.0 m (~US$5,600): 270 drums (one TP PKK round), 200 blankets, 12 shelter tanks

TARGET

Rp225.7 m (~US$12,600)

CEILING

Rp406.4 m (~US$22,600)

LARGEST UNCERTAINTY

How many frail older residents live in the riverbank RTs; no list exists until action 1 makes one

Floor = Rp53.46 m (270 drums) + Rp29.98 m (200 blankets) + Rp17.52 m (12 tanks) = Rp100.96 m. Target = Rp106.92 m (540 drums) + Rp74.95 m (500 blankets) + Rp43.8 m (30 tanks) = Rp225.67 m. Ceiling = Rp160.38 m (810 drums) + Rp158.44 m (1,057 blankets) + Rp87.6

* Suggested formulation: check with a health worker before sharing.

m (60 tanks) = Rp406.42 m. Rate: JISDOR Rp17,948 per US$ (15 October 2026). **All amounts are readiness money; none is committed. The target fell 62% in verification**, from the panel's Rp601.72 m. The panel put 1,057 drum-and-jerrycan kits through PMI Jakarta Timur for flood households. But East reported no dry wells in 2026, its flood deaths are older people dying of cold, and PMI Jakarta Timur's largest kit distribution on record is 20 family kits (March 2026). Its 1,057 households in March 2025 were fed from a kitchen, not given kits. So the placement became one blanket per named frail elder, the item PMI has actually handed out (200 in March 2025). Not counted: the province trigger-cash line JK-F01; water delivered free by BPBD and PAM Jaya; PAM Jaya's free connections and free tanks; boats, pumps, and staff in existing budgets. **Public money:** the 2027 APBD ceilings were fixed when the KUA-PPAS was signed on 13 August 2026, and the RAPBD 2027 (Rp82.89 tn) was tabled on 13 October. None of these actions is a new APBD 2027 line. Public money for them can come only by reallocation within existing suku dinas lines during the deliberations, from the 2026 BTT on a declared status (by pergeseran under siaga darurat), from the APBD-P 2027, or from BNPB Dana Siap Pakai.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
BAZNAS (BAZIS) DKI, delivered with TP PKK DKI through the puskesmas jumantik and PKK cadres	Lidded 160 L drums for households storing water in open containers in Cakung, Matraman, and Pasar Rebo (action 4)	Rp53.5 m / 106.9 m / 160.4 m	Pre-positioned stock	270 / 540 / 810 households (one to three rounds of TP PKK DKI's largest one-day handout, 270 on 15 Apr 2026) × Rp198,000 (undated retail). TP PKK DKI delivers: with PAM Jaya it handed out 520 free 300 L tanks in three rounds, Jan–Apr 2026. Excludes households holding a free tank. Camino Verde: −29.5% infection through mobilisation	Partially confirmed
PMI Jakarta Timur, from the named lists of action 1	One blanket for each named frail older resident in the seven riverbank kelurahan, kept at the shelter (action 1)	Rp30.0 m / 75.0 m / 158.4 m	Pre-positioned stock	200 / 500 / 1,057 × Rp149,900 (one undated retail listing). 200 = PMI's March 2025 blanket count; 1,057 = its March 2025 household reach. Check BPBD DKI's shelter stock first	Partially confirmed

* Suggested formulation: check with a health worker before sharing.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
Dompet Dhuafa (DMC), with BAZNAS (BAZIS) DKI as the alternate	Closed 500 L water tanks at flood shelters on the Cipinang and Sunter, released only for signed shelters (action 2)	Rp17.5 m / 43.8 m / 87.6 m	Pre-positioned stock	12 / 30 / 60 tanks × Rp1.46 m. Dompet Dhuafa evacuated Cipinang Melayu in July 2025; the number of shelters is set by action 2	Unverified

The funder's one thing: in East Jakarta the cheapest life saved is not bought with water. It comes from a name on a list and a blanket at a shelter, because the people who died here in 2014 and 2020 were old, cold, and at home. PMI's national flood Early Action Protocol (EAP2024ID01) does not cover Jakarta, so nothing pre-arranged pays for this today.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives, money, or the window here. Cards 1 to 5 are province-wide (written once as JK-X01 to JK-X05); cards 6 to 8 are East Jakarta's own (card 8 is East's copy of the province card JK-X10).

Do not stand the response down when the rains return

CONTRAINDICATED

The first heavy rain is the handover, not the end. Water stored for the drought becomes breeding stock within one to two weeks, and DKI's dengue usually peaks in March to May. East Jakarta's Cipinang and Sunter flooded on 21–22 March 2026 and the Ciliwung on 17 April and 5 May 2026, all after the "rainy season" headlines had passed.

* Suggested formulation: check with a health worker before sharing.

Instead: keep the lists, boats, rounds, and triage running to March 2027; stand down on falling dengue cases, not on rainfall.

Do not make fogging the visible dengue response, and do not bulk-buy temephos without a bioassay

CONTRAINDICATED

Jakarta *Aedes aegypti* resist permethrin, the fogging class (Hamid et al., PLoS ONE 2017). Kemenkes asks for fogging only after a case investigation.

Instead: fog only on a case investigation; put the effort into weekly cover-and-scrub rounds (action 4); choose any larvicide after a WHO bioassay.

Do not tell households to "store water" without "cover it, drain and scrub it weekly"

CONTRAINDICATED

Aedes eggs stick to container walls and survive draining. Storage advice alone multiplies breeding sites, including at flood shelters where water sits for days.

Instead: every notice and tanker drop carries the whole line (province action JK-02).

Do not present tanker, well, refill-depot, or boat-delivered water as drinking water *

CONTRAINDICATED CORRECTED

No tanker water-quality data was found, and drums filled from tankers sit for days. PAM Jaya's lab found well water in South Jakarta "clear but contaminated" in February 2026; no East test was found. Satpol PP closed refill depots in South and West Jakarta for *E. coli* on 10–11 December 2025, and only 22 of DKI's 2,541 depots hold a hygiene certificate (SLHS).

* Suggested formulation: check with a health worker before sharing.

Instead: label it "air bersih, bukan air minum: rebus dulu"; drink boiled or gallon water.

Do not answer smog with road spraying, mist generators, cloud seeding, or odd-even rules, and do not spend drought water on misting

CONTRAINDICATED

The health minister said in August 2023 that road spraying only moves pollution. Each mist generator uses water in a drought. Cloud seeding needs clouds that a dry El Niño season does not bring. Odd-even rules (*ganjil-genap*) are not a smog response either (province card JK-X05). East's worst station, Lubang Buaya, reads high because of nearby tofu and charcoal works, which no spray touches.

Instead: protect people indoors on bad days (action 6) and target the sources.

Do not tell Kampung Melayu and Bidara Cina they are protected by the Ciliwung sodetan or the normalisation

CONTRAINDICATED

The sodetan, which carries Ciliwung water from Bidara Cina to the East Flood Canal (BKT) and Kali Cipinang, opened on 31 July 2023. On 30 November 2023 the Ciliwung flooded about 100 houses in Kebon Pala, Kampung Melayu, 30–125 cm deep; the RT head said the sodetan had "no effect at all yet". Bidara Cina was about 2 m deep in July 2025 and nearly 2 m on 5 May 2026. The normalisation stood at 17 of 33 km in May 2026, with the rest due in 2029; in Cawang, 62 of 170 parcels had been cleared by July 2026. No official evaluation of the sodetan has been published.

Instead: plan this season as if the works were not there: the named lists, gauge triggers, and boats (actions 1 and 2).

Do not make a rescue boat wait for a written request

CONTRAINDICATED

On 4 March 2025, a Balekambang resident reported that with water at 1.5 m he was told to file a letter before he could borrow a rubber boat. The water had risen from Depok's Siaga 1 to 1.5 m in about four hours; paperwork eats that margin.

* Suggested formulation: check with a health worker before sharing.

Instead: boats staged at the lurah office and released on the gauge (action 2); the paperwork follows the rescue.

Do not count infiltration wells (sumur resapan) as flood protection on the Cipinang and Sunter

CONTRAINDICATED CORRECTED

The mayor reported about 3,000 infiltration wells built across East Jakarta's ten kecamatan in 2022, against a target of 2,000; a report three weeks earlier said 1,500, and the jump has not been checked. The DPRD zeroed the province's well budget for 2022. No evaluation of their effect exists, and the Cipinang and Sunter floods are rivers and a tide-locked drain, which no well absorbs.

Instead: clear the secondary drains and stage the pumps (action 5).

WHAT HAS HAPPENED HERE BEFORE — THE RECORD

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Feb 2007	Jakarta flood, in a weak El Niño	No East Jakarta count found (48 in DKI; Bappenas)	Flood-control works planned
Jan 2013	Ciliwung flood (neutral)	7 dead in BPBD's record: Kampung Melayu 5, Bidara Cina 1, Setu 1; 42,836 displaced in East in January	Normalisation of the Ciliwung pushed
Jan 2014	Ciliwung flood; Cawang 400 cm (neutral)	2 dead (a man from Kampung Pulo of cold during evacuation; an older Bidara Cina resident of illness), not in BPBD's table; 32,470 displaced	Nothing found
Feb 2015	Flood at the onset of the 2014–16 El Niño	1 dead in Kebon Pala, Makasar (BPBD)	Nothing found

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Aug 2015	Kampung Pulo cleared for normalisation; families moved to Rusunawa Jatinegara Barat	Not applicable	Rent after three free months; Kebon Pala, across the river, still floods
Sep–Oct 2019	Shallow wells fail in Bambu Apus and Munjul, Cipayung (neutral: before the 2019–20 El Niño began; strong positive IOD)	No deaths reported	The Satgas Air Bersih, with PAM Jaya, sent tankers within two hours of an RT report
Jan 2020	New Year flood, 377 mm at Halim (El Niño under ONI v6)	3 older residents of Cipinang Melayu dead of hypothermia (BNPB); none in BPBD's table	Nothing specific
Jul 2023	Ciliwung–BKT sodetan opens at Bidara Cina	Not applicable	Kebon Pala floods again on 30 Nov 2023 ("no effect at all yet")
Mar 2025	Ciliwung flood; Balekambang 1.5 m four hours after Depok Siaga 1 (neutral)	No deaths found; PMI fed 1,057 households in 11 kelurahan	Nothing found
Oct–Nov 2025	IPA Pulogadung stopped for PLN works, 22:00 on 31 Oct to 02:00 on 1 Nov (neutral): 53 kelurahan in three cities; East areas named include Pisangan Timur, Rawamangun, Pulo Gadung, Cakung Barat, and Penggilingan	No deaths reported	Nothing found
Jan 2026	Sunter and Cakung Drain floods: Cipinang Melayu 1.2 m, Rawa Terate 50–100 cm (neutral)	No deaths in East confirmed	Two mobile pumps per city, Aug 2026
Mar–May 2026	Lebaran flood, 46 RT (16 in Ciracas); Kebon Pala 110 cm in April; Bidara Cina nearly 2 m in May (neutral in March; El Niño from April)	696 evacuated in March; no deaths found	Nothing found

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Sep 2026	BMKG drought warning at *Awas* for East (El Niño)	No dry wells reported	Tankers on standby; no status declared

The recurrence nobody has noticed: East Jakarta's flood deaths are not drownings in deep water. They are older and sick people dying of cold, in their own homes or during evacuation, in 2014 and again in 2020, and BPBD's kelurahan tables miss them both times. So the "quiet" years in the official record are not quiet, and the riverbank kelurahan most often flooded (Cipinang Melayu, Kampung Melayu, Bidara Cina, and Cililitan, all ten recorded years) are where to look. A man of 18 was reported swept away under the JORR toll bridge in Cakung Barat on 19 January 2026; that report was seen only in a search result and is not counted. ENSO phases follow NOAA's ONI (ERSSTv6, five-season rule); the March 2025 flood is neutral (FMA 2025 −0.1), the 2019 dry season is neutral (ASO 2019 +0.3), and the 2026 El Niño episode starts in MAM 2026, so the April and May 2026 floods are El Niño events and the January and March ones are not. City-wide events (1996, 2002, 1997–98 rice, 1998, 2004, and 2024 dengue, the 2023 smog and fires) are in the province file.

WHERE THE EXPERTS DISAGREE

UNRESOLVED

- **Evacuate early** (Emergency manager, Historian) versus **people will stay upstairs anyway** (Frontline, Skeptic). Both stand: action 1 moves the people who cannot cope upstairs and supports the rest where they are, rather than writing a plan the RT will not use.
- **Water kits for flood households** (Philanthropist) versus **blankets for named elders** (the funding verifier). The verifier won on East's record: no dry wells this year, and deaths from cold. If BMKG returns East to *Awas* and wells fail, the drum line (F01) can be widened to the dry RTs of action 7.
- **Lids save lives** (Philanthropist) versus **no trial shows it** (the verifiers). Camino Verde measured mobilisation, not lids. The drums are funded as part of the weekly rounds, which a pupal survey in the first RTs would test.

WHAT NOBODY COVERED

BLIND SPOT

The industrial north-east. Cakung and Pulogadung hold the Pulogadung industrial estate (JIEP) and the KBN Cakung bonded zone, where about 70 garment firms employ mostly women on serial contracts. No lens found where those workers live, how they hear warnings, or whether their boarding houses (*kos*) lose water when IPA Pulogadung stops, as it did on 31 October–1 November 2025 (East areas named include Pisangan

* Suggested formulation: check with a health worker before sharing.

Timur, Rawamangun, Pulo Gadung, Cakung Barat, and Penggilingan). Cakung also has East's highest dengue incidence and no RSUD. If the dry season runs long, the next problem here may be a plant outage, not a dry well, and nobody has mapped who it reaches.

HOW TO READ THIS

METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale. Here the only row is the whole province (Jakarta Raya, 10.7 million people), so East Jakarta's figure is a population share. The El Niño projection covers *heat only*; floods, drought, smog, and dengue are additional to it and are carried here by the historical record rather than by a published number.

HOW THIS BRIEFING WAS PRODUCED

METHODOLOGY

- **Scope.** The location was taken as given: Kota Administrasi Jakarta Timur, DKI Jakarta (Kemendagri 31.75; BPS 3172; 10 kecamatan, 65 kelurahan; 3,083,988 people, BPS 2026 projection). Its area code is `KOTA-3175`, the Kemendagri code; BPS 3175 is North Jakarta. Climate Impact Lab impact region: GADM IDN.7_1 "Jakarta Raya", the whole province. Its row (about 260 excess heat deaths, September 2026 – February 2027; 147 in December–February) was scaled by population share (28.9%) to about 75, our arithmetic. Kelurahan is the finest unit named; RW appear only in text from a source and are never ranked; dengue is shown no finer than kecamatan.
- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline. The global total covers June 2026 – February 2027; country and province figures cover September 2026 – February 2027. It covers heat only.
- **Expert panel.** Eight simulated lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, food supply chain, and philanthropist), run as six research agents plus a status researcher for the dated readings and plant feeds, researched East Jakarta in parallel from web sources, to a fixed brief carrying the set's verified facts (PLAN.md log). Province facts were reused, not re-researched.
- **Local evidence.** From the project GIS base (`projects/elnino-jakarta/gis/jakarta_base.gpkg`), built from Satu Data Jakarta: BPBD flood events by kelurahan (2013–2024), Dinkes dengue by kecamatan (suspected cases 2024, incidence 2025), Dinas SDA subsidence

* Suggested formulation: check with a health worker before sharing.

benchmarks (East medians 2.9, 3.0, and 2.9 cm a year in 2023–25; fastest about 4 cm at Cawang), puskesmas, and flood evacuation sites. Satu Data is a single-page app, so its links open the portal rather than the table.

- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias. Contradictions were kept. Actions were ranked by expected lives saved per unit of effort, each was given a payer or marked unfunded, and the placements were reconciled against the ranked list. City-wide items were left to the province file.
- **Verification.** Four verifier agents checked all 11 East Jakarta recommendations, the funding envelope, and the record: floods, boats, shelters, pumps, and the three local cards; dengue, referral, and heat; water and food, with the treatment plants; and the funding envelope (recipients, duplication, and scale). Their corrections are shown under each action.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.
- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not searchable this run: the page renders "Number of Adaptations: 0" until a country filter is applied in a browser, and the dataset is behind a download form. No action carries a checked precedent from it; this is unsearched, not "none exists".
- **Health wording.** Passages where a wording error could hurt someone (dengue danger signs and care, heat, and drinking-water treatment) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented. One exchange rate for the set: JISDOR Rp17,948 per US$ (Bank Indonesia, 15 October 2026). Every changing reading carries its date. Indonesian text for every action, funding line, and event is in `east-jakarta-timur-id.json`, not yet reviewed by a native speaker.
- **Revised 2026-10-15 after the set audit** (fixes applied: the verification banner recounted to 2 confirmed and 9 corrected; ENSO labels re-read against ONI v6, with the 2019 dry season and March 2025 neutral and April–May 2026 El Niño; the September *Awas* list cited to Kompas TV; one flood lead time set-wide and the Katulampa Siaga 2 trigger; the IPA Pulogadung outage dated 31 Oct–1 Nov 2025, given its plant code and a record row, without an unsourced East count; the same-day subsidised-food window; the drum tiers resized to TP PKK DKI's largest one-day handout (270 / 540 / 810 households, replacing a 480 carried from a misread BAZNAS figure), with TP PKK DKI as delivery partner; the 2019 tankers attributed to the Satgas Air Bersih; the sodetan route as the source gives it; the Kemenkes 2026 dengue

* Suggested formulation: check with a health worker before sharing.

circular cited; PMI's flood EAP named as national; the dead RSUD Cakung link replaced; do-not cards 4, 5, and 8 matched to the province cards; the unverified SPHP rename removed; UK spelling).

- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. Run-specific gaps: BMKG's dasarian III warning (not yet issued); the Jatiluhur cut level; IPA Pulogadung's location and raw-water source; the 31 kelurahan IPA Buaran III serves; the Sunter Hulu and Cipinang Hulu thresholds; the current boat fleet and pump positions; a dated East air reading for 2026; East deaths in 2007 and any East dengue deaths in 2025–26; the Cakung Barat drowning of January 2026 (search result only); the blanket, drum, and tank prices, which are undated retail listings. Several sites returned 403 (Tirto, rm.id, merahputih); claims seen only in search results are marked as such.
