EL NIÑO ACTION BRIEFING · 15 OCTOBER 2026

North Jakarta, Jakarta

El Niño reaches North Jakarta as dry wells and dry pipe ends now, smog over Cilincing, and then dengue and floods. First, put the tankers on a posted timetable for the eight network-end kelurahan, and put a lid on every drum they fill.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
Jakarta Raya (whole province, one row)	~44 for North Jakarta, scaled (DKI: 260)	6-month, Sep 2026 – Feb 2027	Dry wells and pipe ends now; dengue and floods from December

16/16 recommendations checked. 0 confirmed as written, 8 corrected, 1 unverified; 7 items of circulating advice contraindicated (the Do not cards). The funding target fell 92% in verification, from the panel's Rp3.98 bn to Rp304 m: water already trucked free, larvicide supplied free, and no recipient with a record at the panel's scale. Revised 15 October after the set audit: the cadre top-up cut, Kamal Muara added to the water timetable, the drums resized to TP PKK DKI's largest one-day handout. Exposure: Climate Impact Lab, *451,000 at Risk*, Sep 2026, pre-peer-review, heat only. North Jakarta's ~44 is our arithmetic, not an Impact Lab finding: 260 × 1,822,156 ÷ 10,669,702 = 44.4 (Dec–Feb: 147 × the same share = 25.1).

EXECUTIVE SUMMARY — AT A GLANCE

6.13°S 106.86°E, Indonesia · BPS boundaries via OCHA COD-AB; OpenStreetMap contributors (ODbL); Natural Earth

- **The risk.** Wells and pipe ends are failing now (29 tankers to Kalibaru and Semper, 2 Sep); floods killed 11 here in 2007 and 3 by electrocution in January 2026.
- **First action.** BPBD Jakarta Utara, PAM Jaya, and Dinas SDA post a weekly tanker timetable for eight network-end kelurahan from 1 November.
- **The money.** Rp152 m / Rp304 m / Rp357 m (US$8.5k / 16.9k / 19.9k); top placement: lidded drums for homes off the pipe, 270 households a round.
- **Do not.** Do not stand down when the rains return: drought water stored in open drums is where dengue breeds.

* Suggested formulation: check with a health worker before sharing.

North Jakarta (Kota Administrasi Jakarta Utara, Kemendagri 31.72) has 1,822,156 people (BPS, SP2020-based 2026 projection), six kecamatan, and 31 kelurahan. Its poverty rate, 6.33% (BPS, March 2025), is the highest of the five mainland cities. The mayor is appointed and has no budget of its own: the province holds the money and PAM Jaya runs the pipes, so this briefing names the city offices (suku dinas) that do the work and leaves the city-wide items to the province file (`jakarta-province-*`). It is the first of six Jakarta briefings, written as a proposed draft (*draf usulan*) for the two-year review of the RPB 2023–2027 (Pergub DKI 1/2024).

The season. An El Niño dry season that is already here: it has dried shallow wells and the ends of the pipe network and held smog over the city; it is expected to delay and shorten the rains; and it does not make the January–February floods less likely. Each briefing therefore covers one season, from dry wells, smog, and heat now, through dengue bred in stored water and the floods, to March 2027.

The warning. BMKG put West, Central, East, and North Jakarta and Kepulauan Seribu at *Awas* for 11–20 September (BPBD DKI, via Kompas TV, 14 Sep); South Jakarta was not listed. BMKG's September bulletin is no longer online, and one report differs. In October dasarian II, BMKG has North Jakarta at *Awas* again, with Central, South, and Kepulauan Seribu (bmkg.go.id).

WATER AND AIR STATUS	READING	DATE
Jatiluhur reservoir (PJT II), most of Jakarta's raw water	90.73 m, about 16 m below its normal top of about 107 m; the level at which raw water to Jakarta is cut is **not published**	15 Oct 2026, 07:55 WIB
BMKG drought early warning, North Jakarta	**Awas** (highest level; bmkg.go.id)	Dasarian II, Oct 2026
PAM Jaya outage reaching North Jakarta	IPA Hutan Kota stopped: seawater at the Kali Angke intake (TDS about 10,000 ppm, 18 Sep); Kapuk Muara and Kamal Muara cut in North Jakarta (`IPA-HUTANKOTA`)	From 18 Sep 2026
Tanker drops (reported, not complete)	29 tankers from ten agencies to Kalibaru and Semper	2 Sep 2026
Worst air reading found in the zone	ISPU 129, "tidak sehat", PM2.5 about 87 µg/m³, SDN 5 Marunda (station unverified)	18 Aug 2026

* Suggested formulation: check with a health worker before sharing.

WATER AND AIR STATUS	READING	DATE
Rob (tidal flood) forecast, Dinas SDA	Peak 0.64 m above mean sea level, seven coastal localities	25–31 Oct 2026

Dengue by kecamatan (Dinkes DKI via Satu Data Jakarta): 2024 suspected cases, Cilincing 730, Penjaringan 571, Tanjung Priok 453, Koja 389, Kelapa Gading 349, Pademangan 209 (North total 2,701); incidence in 2025 per 100,000, Kelapa Gading 184.46 (3rd of DKI's 44 kecamatan, after Cempaka Putih 226.32 and Cengkareng 196.39), Koja 139.29 (4th), Cilincing 104.1, Pademangan 98.3, Tanjung Priok 90.6, Penjaringan 85.7. PAM Jaya publishes no service zones and its coverage figure (82.03%, May 2026) has no stated denominator, so this briefing does not estimate how many households are on wells.

THE FOUR COASTAL KECAMATAN

NAMED SECTION

Penjaringan, Pademangan, Koja, and Cilincing face the sea, and the ground under them is sinking. Dinas SDA's GPS benchmarks (Satu Data Jakarta) give North Jakarta a median of 3.85, 3.4, and 3.0 cm a year in 2023, 2024, and 2025, but Penjaringan's medians are 4.6, 5.0, and 4.3, and the fastest points are 8 to 9.1 cm a year at Muara Baru and Pompa Kamal (Kamal Muara), 7.7 to 8.6 at Muara Angke, and 6 to 7.4 at Pantai Mutiara. Only 11.82 of the province's 28.28 km of the coastal dike (NCICD) were built by December 2025 (Dinas SDA). About 500 m of the Muara Baru seawall, which Pelindo is responsible for, has seeped at king tide since 4 December 2025, from corrosion and subsidence; it was patched with sandbags, and seepage was still reported in August 2026. The permanent fix is budgeted for 2026–27.

Keep it in proportion. Rob floods homes, roads, and fish auctions; it displaces people and costs money. No rob death was found in North Jakarta from 2007 to 2026. The flood deaths recorded in North Jakarta came from river and rain floods and from electrocution: Kapuk Muara and Pejagalan in 2013, Kapuk Muara again in 2014 (a father and son electrocuted), Papanggo (Tanjung Priok) in 2015, and three people electrocuted in floodwater in Semper Barat and Kalibaru on 12 January 2026. So this section's one action (action 5) is about keeping the wall standing through the king tides, and its two warnings (Do not 6 and 7) are about not deepening the sinking or using the wall to clear the kampung behind it.

The coast is also where water is bought by the jerrycan. In Muara Angke a pikul (two jerrycans) cost Rp5,000 in December 2025; in Kampung Empang a jerrycan cost Rp6,000 in February 2026, and a family used three a day. When pipes reached 3,000 households in Kamal Muara in 2024, their water bill fell from Rp10,000–15,000 a day to Rp120,000–150,000 a month.

* Suggested formulation: check with a health worker before sharing.

WHAT THIS PLACE SHOULD DO RANKED

Ranked by expected lives saved per unit of effort before and through the peak. Backing lenses are shown per action. Convergence was checked for shared bias. Each action carries the RPB's columns: owner, place, target, date, and source of funds.

1. From 1 November, post a weekly tanker timetable for Kalibaru, Semper Barat, Semper Timur, Marunda, Cilincing, Penjaringan, Pluit, and Kamal Muara, built from RT counts of households that buy water by the jerrycan

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · FRONTLINE · PHILANTHROPIST | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Utara, with PAM Jaya, Sudin SDA, and the kelurahan and RT heads	Timetable posted 1 Nov 2026; weekly to the rains' return and review	Water free (PAM Jaya, Dinas SDA); Rp80 m for RT ledger coordinators (F03)	Water reaching whoever phones 112; households going short in silence

The eight kelurahan are the 2023 tanker list in North Jakarta, the 2 September 2026 drop (29 tankers from ten agencies to Kalibaru and Semper), and Kamal Muara, cut when IPA Hutan Kota lost supply on 18 September. Kalibaru, Marunda, and Cilincing are meant to be fed from SPAM Jatiluhur I through DC Cilincing 2 (from December 2024); that they still needed tankers in September suggests it has not fixed their supply. Everything runs on call-in today (112 and PAM Jaya's 1500 223): PAM Jaya has about 70 free tankers of 4,000 L, and Dinas SDA holds 12 tankers, 5 mobile treatment units, and 22 water kiosks for North and West Jakarta "when urgent needs arise". No posted schedule exists anywhere in North Jakarta. The RT head and one community coordinator keep a list of households buying water by the jerrycan, including those who pay PAM bills but get no flow (Marunda, 2022); names stay in the kampung and only counts go to BPBD, because a list held by officials reads as an eviction list here. Plan on at least 15 L per person per day (Sphere). Watch the cart price: when a pikul goes from Rp5,000 to Rp6,000, a kampung's wells have failed.

* Suggested formulation: check with a health worker before sharing.

Corrections: Dinas SDA's equipment is on demand, not scheduled, so the timetable is new work, not a renaming. Whether SPAM Jatiluhur I has failed in Kalibaru is unverified either way. Province rule: action JK-03 (posted schedules and a "boil before drinking" label in every city). Plants: the IPA Hutan Kota cut from 18 September reached Kapuk Muara and Kamal Muara (`IPA-HUTANKOTA`; province event JK-E21), and the 5–6 June Pejompongan I outage reached North Jakarta (`IPA-PEJOMPONGAN1`; JK-E20); the rest of the feed is unpublished.

2. From November, put a tight lid on stored water in jerrycan-dependent homes off the PAM Jaya network and at tanker drop points, and run weekly cover-and-scrub rounds by jumantik in Kelapa Gading, Koja, and Cilincing; start with 270 homes

`PARTIALLY CONFIRMED` `PHILANTHROPIST · PUBLIC HEALTH · SKEPTIC · FRONTLINE` `ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN` `PHASE: PRA-BENCANA`

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Utara and the puskesmas kecamatan, with jumantik and Dasawisma cadres; BAZNAS (BAZIS) DKI buys, TP PKK DKI delivers	**270 households with drums by 15 Dec 2026; rounds weekly to March 2027**	**Rp224 m at target: drums Rp107 m (F01) and 80 closed tanks Rp117 m (F02)**	**Drought storage becoming the January–April dengue peak**

Every drum filled this dry season is a breeding site when the rains come. Kelapa Gading's dengue incidence in 2025, 184.46 per 100,000, was the third-highest of DKI's 44 kecamatan (after Cempaka Putih, 226.32, and Cengkareng, 196.39); Koja (139.29, fourth) and Cilincing (104.1, with the most 2024 suspected cases, 730) follow. A lidded 160 L drum costs about Rp198,000 (US$11) and a 500 L tank about Rp1.46 m (the province's shared unit costs). PAM Jaya and TP PKK DKI already give free 300 L tanks (target 2,000 in 2026) to simple households, mainly 2A1 and 2A2 customers with buildings under 70 m²; 270 went to North Jakarta on 15 April (Muara Karang 111, Yos Sudarso 50, Dewa Ruci 43, Sunter 41, Kelapa Gading 25). So the drums go only to jerrycan-dependent households that are not PAM Jaya customers and hold no free tank. The weekly round adds the line every PAM Jaya notice should carry (province action JK-02): cover it, drain it, scrub the walls, where the eggs stick. The best trial evidence is Camino Verde (BMJ 2015; Nicaragua and Mexico, 150 clusters): community mobilisation without insecticides cut recent dengue infection in children by 29.5% (95% CI 3.8–55.3).

* Suggested formulation: check with a health worker before sharing.

Corrections: Camino Verde mobilised households; it did not hand out lids, so the lids support the rounds rather than stand alone. The Girardot (Colombia) covers were insecticide-treated, cost US$19.2 a household, and measured mosquitoes, not dengue. The Cambodian larviciding study (US$313 per DALY) is about temephos and was dropped as support. The drums duplicate no public money only if they skip PAM Jaya customers and free-tank holders, so the kelurahan checks the RT ledger against the tank handout lists. BAZNAS DKI has no recorded drum distribution, so the drums are sized to TP PKK DKI's largest one-day handout on record: 270 households (with PAM Jaya, North Jakarta, 15 Apr 2026), one round at the floor and up to three at the ceiling, with a two-week delivery test before the second round. BAZNAS (BAZIS) DKI is the channel; TP PKK DKI is the delivery partner: with PAM Jaya it handed out 520 free 300 L tanks in three rounds, Jan–Apr 2026 (270 in North in one day). Prices are undated retail listings: release money against a supplier quote.

3. By 30 November, every puskesmas kecamatan triages dengue warning signs, with written referral routes for Kelapa Gading and Penjaringan, which have no RSUD

PARTIALLY CONFIRMED | PUBLIC HEALTH · EMERGENCY | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Utara; the six puskesmas kecamatan; RSUD Koja, Tugu Koja, Tanjung Priok, Cilincing, and Pademangan; RSPI Sulianti Saroso	**30 Nov 2026, with drills in December**	**Staff time and stock in existing budgets; not costed**	**Dengue cases becoming deaths in the January–April peak**

Before March, North Jakarta can do little about how many people catch dengue; it can do a great deal about how many die. Indonesia's dengue case fatality rate fell from 0.9% in 2021 to 0.42% in 2025 (Kemenkes) with no change in mosquitoes: the difference is case management. Use the Kemenkes clinical guidelines (PNPK, KMK HK.01.07/MENKES/9845/2020 for adults; 4636/2021 for children), which follow WHO 2009: recognise the warning signs, monitor haematocrit, give fluids, refer early. Kelapa Gading and Penjaringan have no RSUD, so write their routes now: Kelapa Gading to RSPI Sulianti Saroso (Kemenkes, in Papanggo), Penjaringan to RSUD Pademangan. From January, after floods, the same alert covers leptospirosis: early doxycycline for fever after floodwater exposure (province action JK-06).*

* Suggested formulation: check with a health worker before sharing.

Corrections: DKI's 2024 figure is 9,156 cases and 17 deaths to week 22 (Kemenkes via Databoks), not 9,261 and 22; the 22 deaths belong to Klaten. Leptospirosis prophylaxis is unproven (Cochrane), so the measure is early treatment, not mass prophylaxis. No 2026 dengue count by city is published.

4. By 15 November, run a full-load generator test at each priority pump house with the PLN feed off, log the shortfall, and close it with rental generators and 72 hours of fuel

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin SDA Jakarta Utara; PLN UID Jakarta Raya consulted	15 Nov 2026	Existing operations budget; rental generators unpriced	A repeat of Pluit 2013 and 2015

Start with Waduk Pluit, Teluk Gong, Polder Kamal, Pasar Ikan, and Muara Angke. In January 2013 the Banjir Kanal Barat wall broke at Latuharhary, the water ran down to Waduk Pluit on the day of the highest tide, a transformer flooded, and 8 pumps stopped; five people died in Kapuk Muara and Pejagalan. At the February 2015 flood peak PLN switched off 625 substations across Jakarta and Tangerang to prevent electrocution, and Waduk Pluit, which draws on 18 distribution substations beside the Muara Karang substation, became a dispute between the governor and PLN. Teluk Gong's pump house flooded in 2013 and 2014. Since then Waduk Pluit has two substation feeds and an automatic changeover, but no written rule stops PLN cutting a flooded area for safety. The test will probably find a capacity gap, not confirm readiness; that is the point of it.

* Suggested formulation: check with a health worker before sharing.

Corrections: pump counts conflict (Dinas SDA: 171 pumps at 56 locations in February 2026, 168 at 55 in April; a 1 October press figure of 194 at 71 is unverified). Whether PLN's promised dedicated line from Muara Karang was completed is unverified. The notify-before-cut rule with PLN is province action JK-08.

5. Coastal kecamatan: before the December–January king tides, stage sandbags and mobile pumps on the Muara Baru seawall stretch and at Pantai Mutiara, patrol at night on spring tides, and relay Dinas SDA rob forecasts to RT heads

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin SDA Jakarta Utara, with Pelindo (the Muara Baru wall is Pelindo's)	Materials staged by 30 Nov 2026; patrols at every spring tide, Dec–Jan	Existing stock and budgets	A seep becoming a breach under a king tide

The roughly 500 m seeping stretch near Nizam Zachman port and the Pantai Mutiara gap (the 2026 priority) are the weak points. A 100–160 m section of the new NCICD wall at Muara Baru already collapsed once, on 3 December 2019; the older wall behind it held. Dinas SDA forecasts rob by named locality (Tanjungan, Muara Angke, Muara Baru, Pasar Ikan, Ancol, Tanjung Priok–Kali Baru, Marunda), not by RT, so the RT heads get the locality forecast by WhatsApp. The next forecast window is 25–31 October 2026, peak 0.64 m.

* Suggested formulation: check with a health worker before sharing.

Corrections: the leak is about 500 m (the head of Sudin SDA Jakarta Utara), not 400 m; and the responsibility is Pelindo's, so it is named. No rob death was found; this action protects property and access, and ranks below the water and health actions for that reason.

6. From November, cadres check weekly on elders with hypertension or diabetes, and daily when BMKG forecasts 34 °C or more or the air is "tidak sehat", each elder with two named neighbours who also move them in a flood

PARTIALLY CONFIRMED | PUBLIC HEALTH · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
The puskesmas kecamatan, with posbindu and posyandu-lansia cadres, majelis taklim, and RT heads	**Two neighbours named by 30 Nov 2026; checks to March 2027**	**Cadre time; no new money (the province already funds Dasawisma coordinators and jumantik)**	**Heat, smog, and flood deaths among isolated chronic patients**

Heat is the one hazard with a number: about 44 excess heat deaths for North Jakarta from September to February, by our scaling of Impact Lab's province row. DKI has Indonesia's highest diabetes rate (3.9% of people 15 and over against 2.2% nationally, SKI 2023), and hypertension reaches 57.8% at ages 65–74 nationally. The visit covers water, medicines (diuretics stay with puskesmas clinicians), signs of heat illness, and from December the dengue warning signs. The same two neighbours move the elder in a January–February flood. BMKG has no formal heat warning for Jakarta, so the trigger is its daily maximum forecast or the nearest SPKU station (province action JK-07). Fishers from Indramayu, Pemalang, and Tegal go home in bad weather, leaving women, children, and elders behind in Muara Angke.*

Corrections: the Ahmedabad heat plan (Hess et al. 2018, Journal of Environmental and Public Health, about 1,190 deaths a year avoided) was a pre/post study in dry heat above 43 °C, built on warnings and cooling rather than neighbour checks; Jakarta peaks at 33–35 °C in humid heat. Treat this as a low-cost measure, not one with a proven effect here. The phone-credit top-up was cut in the set audit: the

* Suggested formulation: check with a health worker before sharing.

province already pays Dasawisma coordinators (Kepgub 497/2025) and jumantik. The Rp750,000 a month under Kepgub 497/2025 is an operational fund for Dasawisma group coordinators, from 1 September 2025, not pay to every cadre; jumantik receive about Rp500,000 a month (a 2015 provincial plan).

7. By 30 November, name a shelter and an evacuation and electrocution warning for each kelurahan with recorded flood deaths or the most flood years, and send PMI headquarters the list as candidate areas for its flood early action

PARTIALLY CONFIRMED | EMERGENCY · ECONOMIST · HISTORIAN | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Utara and the wali kota; PMI DKI; kelurahan and RT heads; Sudin Gulkarmat	**30 Nov 2026**	**Staff time**	**Drowning and electrocution in the January–February floods**

The kelurahan are Kapuk Muara (2013, and 2014, when a father and son were electrocuted), Pejagalan (2013), and Papanggo (2015), where deaths were recorded, and Penjaringan and Pluit (flooded in 9 of the 10 recorded years, 2013–24), Marunda and Semper Timur (8). The warning says: switch off at the meter before water enters, and stay out of water near cables. Electrocution, not deep water, killed three people in Semper Barat and Kalibaru on 12 January 2026. PMI's flood Early Action Protocol (EAP2024ID01) triggers anywhere in Indonesia when BMKG forecasts more than 100 mm in 24 hours at 80% probability, with six days' lead, but it holds CHF 200,612 for 2,500 households nationwide and chooses areas only at activation. A pre-mapped list makes North Jakarta a ready candidate; do not plan on the money.*

* Suggested formulation: check with a health worker before sharing.

Corrections: the EAP has no pre-agreed areas and was designed in six districts outside Jakarta; it had not been triggered as of 10 April 2026. Satu Data lists 61 flood evacuation sites, none in North Jakarta, so the shelters must be named, not looked up.

8. Smog in Cilincing, worsened by a dry El Niño season and not caused by it: by 30 November, inspect every coal and bulk stockpile at Marunda, and use closed, filtered rooms in schools and posyandu on "tidak sehat" days

PARTIALLY CONFIRMED | PUBLIC HEALTH · HISTORIAN | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin LH Jakarta Utara; Sudin Pendidikan and the puskesmas for rooms	30 Nov 2026	Inspection in existing budgets; filters not costed	Acute dust and PM2.5 exposure for children and patients in Marunda

Coal dust from the KCN port at Marunda brought a sanction (14 March 2022, 32 items) and then the revocation of its environmental permit (Sudin LH Jakarta Utara decree 21/2022, 17 June 2022). Puskesmas Cilincing still saw 63 skin and 16 breathing complaints in three days in January 2023. Inspect berms, nets, and wetting at the source; Kemenkes judged road spraying useless but small-scale wetting at an industrial source can work. On "tidak sehat" days, one closed room with a filter for classes and posyandu (a sealed room in humid heat also needs a fan). Daily all-cause mortality rises 0.68% per 10 μg/m³ of PM2.5 (Liu et al., NEJM 2019).

* Suggested formulation: check with a health worker before sharing.

Corrections: KCN's status in 2025–26 is unverified and bulk handling may have resumed; the SDN 5 Marunda reading (ISPU 129, 18 August 2026) is from press and the station is unverified, so the trigger is the nearest verified station on udara.jakarta.go.id. The >10,000 modelled air-pollution deaths a year in Jakarta (Syuhada 2023) are a long-term burden that one season's rooms cannot avert.

9. By 30 November, register boat-crew households at Muara Angke, Muara Baru, Kalibaru, and Cilincing in DTSEN and for subsidised food, before the December–February lean season

UNVERIFIED | FOOD SUPPLY · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin KPKP Jakarta Utara, with HNSI (the fishers' association) and Sudin Sosial	**30 Nov 2026**	**Staff time**	**Fisher households facing the lean season and the rice-price peak at once**

The west monsoon keeps boats in port from December to February, and that lean season now meets a rice price forecast to rise through March 2027 (Reuters, 1 October 2026, after a September record of Rp15,769/kg). The rice aid (10 kg a month) ends in December. Fishers are not among the groups eligible for DKI's subsidised food (pangan bersubsidi), and KJP Plus now requires a DTSEN entry, so registering them now opens both doors. The province asks for the quota and eligibility (actions JK-09 and JK-10).

Unverified: North Jakarta's number of fishers. The often-quoted 18,900 appears to be a 2009 count for all of Jakarta; later figures are 27,753 (DKI, 2013) and about 33,500 (the whole coast, 2018), and a 2025 survey counted about 700 fishers in Kalibaru, Cilincing, and Marunda. No DKI lean-season cash scheme for fishers exists. The food signal here is moderate: Jakarta's rice is well supplied; the risk is affordability.

WHAT THE PROVINCE DOES FOR NORTH JAKARTA — WRITTEN ONCE

These items are city-wide, so they are written once in the province file (`jakarta-province-*`, code JK) and not priced here.

- **JK-01, the decree.** BMKG's Awas trigger has already fired for North Jakarta, but DKI has declared no status (West Java declared siaga darurat for drought, 1 July – 30 September 2026). A Keputusan Gubernur declaring siaga darurat kekeringan lets BTT be shifted (by

* Suggested formulation: check with a health worker before sharing.

pergeseran) into water lines and opens a request for BNPB Dana Siap Pakai (Perban BNPB 4/2020); only tanggap darurat opens BTT's direct release.

- **JK-02, the line on every notice:** "tutup wadah air, kuras dan sikat seminggu sekali". **JK-03**, posted tanker schedules and "boil before drinking" labels. **JK-04**, PAM Jaya and PJT II publish the Jatiluhur level at which Jakarta's raw water is cut.*
- **JK-05, trigger cash:** one rule, Rp300,000 once per household per declared status, at most twice a season, through Bank DKI, after a written BPKD and Inspektorat opinion.
- **JK-06 to JK-09:** the dengue and leptospirosis clinical alert, same-day smog and heat alerts, the PLN rule for pump power, and SPHP rice outlets with DKI's share of the October–December tranche and fishers added to subsidised food. **JK-10 to JK-12**, asks to central government: rice aid for January–March 2027, Dana Siap Pakai, and Wolbachia for Kelapa Gading and Koja in 2027.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

9. Fishers into DTSEN and subsidised food															**A/R**

What the chart shows: the health system carries the most rows. Sudin Kesehatan Jakarta Utara is accountable for two actions and the puskesmas for one and responsible for two more, so one meeting between them covers four of the nine. Sudin SDA holds both flood-infrastructure rows. Not shown as columns: PLN UID Jakarta Raya (consulted on 4), Sudin Pendidikan (responsible for rooms in 8), Sudin Sosial (responsible in 9), and Sudin Gulkarmat (consulted on 7). Only action 1 needs a new routine rather than staff time or a decision; only action 2 needs outside money.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR

Rp151.9 m (~US$8,500): 270 drums (one TP PKK round), tanks at 20 drop points, 4 coordinators

TARGET

Rp303.7 m (~US$16,900)

CEILING

Rp357.2 m (~US$19,900)

LARGEST UNCERTAINTY

Whether any recipient can deliver drums to North Jakarta homes off the network within weeks

* Suggested formulation: check with a health worker before sharing.

Floor = Rp53.46 m (270 drums) + Rp58.4 m (20 drop points × two tanks) + Rp40 m (4 coordinators) = Rp151.86 m. Target = Rp106.92 m (540 drums) + Rp116.8 m (40 points) + Rp80 m (8 coordinators) = Rp303.72 m. Ceiling = Rp160.38 m (810 drums) + Rp116.8 m + Rp80 m = Rp357.18 m. Rate: JISDOR Rp17,948 per US$ (15 October 2026). **All amounts are readiness money; none is committed.** The target fell 92% in verification, from the panel's Rp3.98 bn: jerrycans (households already own them), temephos stock (free at the puskesmas, and its use depends on a bioassay), masks (no effect on this season's deaths), and a Rp2 bn flood standby fund (no recipient, duplicates BTT) were cut. The set audit (15 October) cut the Rp225 m cadre top-up, because the province already pays Dasawisma coordinators (Kepgub 497/2025) and jumantik, added Kamal Muara to the water timetable (+Rp24.6 m at target and ceiling), and sized the drums to TP PKK DKI's largest one-day handout, 270 households a round. Not counted: the province trigger-cash line JK-F01, and water delivered free by PAM Jaya, BPBD, and Dinas SDA. **Public money:** the 2027 APBD ceilings were fixed when the KUA-PPAS was signed on 13 August 2026, and the RAPBD 2027 (Rp82.89 tn) was tabled on 13 October, with joint approval due about 30 November. None of these actions is a new APBD 2027 line. Public money for them can come only by reallocation within existing suku dinas lines during the deliberations, from the 2026 BTT on a declared status (by pergeseran under siaga darurat), from the APBD-P 2027, or from BNPB Dana Siap Pakai.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
BAZNAS (BAZIS) DKI; TP PKK DKI delivers, with Dasawisma and jumantik cadres	Lidded 160 L drums for jerrycan-dependent households in Kelapa Gading, Koja, and Cilincing that are not PAM Jaya customers and hold no free tank (action 2)	Rp53.5 m / 106.9 m / 160.4 m	Pre-positioned stock	270 / 540 / 810 households (one to three rounds of TP PKK DKI's largest one-day handout, 270 on 15 Apr 2026) × Rp198,000 (undated retail), with a two-week delivery test. TP PKK DKI, with PAM Jaya, handed out 520 free 300 L tanks in three rounds, Jan–Apr 2026 (270 in North in one day). Camino Verde: −29.5% infection through mobilisation	Partially confirmed
BAZNAS (BAZIS) DKI, with RW committees	Two closed 500 L tanks at each tanker drop point (actions 1 and 2)	Rp58.4 m / 116.8 m	Pre-positioned stock	40 points (an assumed 5 in each of 8 kelurahan) × 2 × Rp1.46 m; floor 20 points. Points to be named in BPBD's timetable	Partially confirmed

* Suggested formulation: check with a health worker before sharing.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
Community organisations in the kampung (for example JRMK or UPC), through a registered yayasan	One RT water-ledger coordinator per network-end kelurahan, Nov–Mar (action 1)	Rp40 m / 80 m	Direct grant	8 × Rp2 m a month × 5 months (assumption); floor 4 kelurahan. Their 2025–26 capacity in North Jakarta is unverified	Unverified

The funder's one thing: buy the lid, not the water. The government already trucks water free, already funds Dasawisma coordinators and jumantik, and with TP PKK gives free tanks to PAM Jaya customers; the one gap no public line fills is closed storage for the households off the pipe. Every open drum filled in October is a breeding site in January, and a lidded drum at about US$11 works against both halves of the season. The cheapest life saved here, though, is not bought with grant money: it is the governor's signature on a decree that BMKG's own trigger has already justified (province action JK-01).

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives, money, or the window here. Cards 1 to 5 are province-wide (written once as JK-X01 to JK-X05); cards 6 and 7 are North Jakarta's versions of province cards JK-X08 and JK-X09.

Do not stand the response down when the rains return

CONTRAINDICATED

The first heavy rain is the handover, not the end. Water stored for the drought becomes breeding stock within one to two weeks, and DKI's dengue peaked in mid-March 2004 and in April 2024. North Jakarta's floods killed in a weak El Niño (2007), a neutral year (2013), and in January 2026.

* Suggested formulation: check with a health worker before sharing.

Instead: keep the tankers, rounds, triage, and shelters running to March 2027; stand down on falling dengue cases, not on rainfall.

Do not make fogging the visible dengue response, and do not bulk-buy temephos without a bioassay

CONTRAINDICATED

Jakarta *Aedes aegypti* resist permethrin, the fogging class (Hamid et al., PLoS ONE 2017; eight Jakarta areas, none in North Jakarta). Kemenkes asks for fogging only after a case investigation, within 100 m of a case. In Camino Verde, households using temephos had higher odds of child infection (aOR 1.44). No North Jakarta bioassay exists.

Instead: fog only on a case investigation; put the effort into lids and weekly scrubbing (action 2); choose any larvicide after a WHO bioassay.

Do not tell households to "store water" without "cover it, drain and scrub it weekly"

CONTRAINDICATED

Aedes eggs stick to container walls and survive draining. Storage advice alone multiplies breeding sites in exactly the kelurahan that buy water by the jerrycan.

Instead: every notice and tanker drop carries the whole line (province action JK-02).

Do not present tanker, well, refill-depot, or boat-delivered water as drinking water *

CONTRAINDICATED PRECAUTIONARY

No water-quality data on North Jakarta tankers, wells, or refill depots was found, and drums filled from them sit open for days. This card rests on precaution, not on a documented outbreak.

* Suggested formulation: check with a health worker before sharing.

Instead: label it "air bersih, bukan air minum: rebus dulu"; drink boiled or gallon water.

Do not answer smog with road spraying, mist generators, cloud seeding, or odd-even rules, and do not spend drought water on misting

CONTRAINDICATED

The health minister said in August 2023 that road spraying only moves pollution. Each mist generator uses about 500 L of water in a drought. Cloud seeding needs clouds that a dry El Niño season does not bring. Odd-even rules are a traffic measure, not a smog response. Vehicles and industry make the smog; the dry season holds it.

Instead: inspect point sources such as the Marunda stockpiles (action 8) and protect people indoors on bad days.

Do not drill or permit new deep wells, or deepen private bores, as the drought response on the sinking coast

CONTRAINDICATED CORRECTED

Muara Baru and Kamal Muara are sinking 8 to 9 cm a year on Dinas SDA's benchmarks, and subsidence tracks groundwater extraction. Pergub 93/2021 bans groundwater only for large buildings (5,000 m² or 8 floors) in listed zones, so nothing stops an emergency household bore; PAM Jaya says private extraction continues inside the zones.

Instead: scheduled tankers and closed tanks now (actions 1 and 2), and pipe connections for the network ends.

Do not use the seawall, flood risk, or a ranking of RW to justify clearing coastal kampung

CONTRAINDICATED

The Pasar Ikan and Kampung Akuarium clearances (11 April 2016) were framed as flood mitigation; LBH Jakarta counted 48 of 113 evictions in 2015 as flood-related. Kampung Akuarium was rebuilt by its residents with JRMK, UPC, and Rujak and won a World Habitat Award in 2024. Rob here has destroyed property, not lives, and a list of names held by officials is read as an eviction list.

Instead: map no finer than the kelurahan, act through the RT, and treat a seeping wall as a reason to watch the wall.

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Feb 2007	Jakarta flood, in a weak El Niño	11 dead and 34,887 displaced in North Jakarta (48 in DKI; Bappenas)	Flood-control works planned
Nov–Dec 2007	Rob: a 2.2 m tide submerges Pluit and Penjaringan (La Niña)	No deaths found	The seawall patched
Jan 2013	Banjir Kanal Barat wall breaks; Waduk Pluit overtops when a transformer floods and 8 pumps stop (neutral)	5 dead in Kapuk Muara and Pejagalan (BPBD); 38 in DKI in January	Pumps added; panels left low at Teluk Gong
Jan 2014	Flood (neutral)	At least 5 dead in North Jakarta by 21 Jan, among them a father and son electrocuted in Kapuk Muara (Kontan; 23 in DKI in January)	Nothing specific
Feb 2015	Flood at the onset of the 2014–16 El Niño; PLN cuts 625 substations at the peak, and power to Waduk Pluit is disputed	3 dead in Papanggo (5 in DKI)	PLN promised a feeder; completion unverified
Nov 2015	El Niño dry season: water crisis in Tanjung Priok and Pluit	No deaths reported; Rp20,000 per 20 L	Nothing found
Dec 2019	A 100–160 m section of the new NCICD wall at Muara Baru collapses	None; the old wall held	Repaired
Jan 2020	New Year flood, 377 mm at Halim (weak El Niño under ONI v6)	No deaths in North Jakarta in BPBD's record (19 in DKI)	Nothing specific

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
2022	Coal dust at Marunda; six months of little PAM water in Marunda	No deaths recorded; skin and breathing complaints	KCN permit revoked; water fixed later
Sep–Nov 2023	El Niño dry season: tankers to Cilincing, Kalibaru, Penjaringan, and Pluit; smog	No deaths recorded	Temporary reservoir at Marunda; no status declared
Dec 2025	About 500 m of the Muara Baru seawall seeps at king tide	None	Sandbags; permanent fix budgeted 2026–27
12 Jan 2026	Extreme rain, Kamal 198 mm, Koja 186 mm (neutral)	3 electrocuted in Semper Barat and Kalibaru	Nothing found
Sep 2026	Wells and pipe ends fail; 29 tankers to Kalibaru and Semper	No deaths reported	Water on request; no status declared

The recurrence nobody has noticed: North Jakarta's flood deaths come from failed power, not just high water. The Pluit pumps stopped in 2013 because a transformer flooded, power to Waduk Pluit was in dispute at the 2015 peak, and in 2014 and 2026 people died of electrocution. And every repair since 2007 was bought after a disaster and left half-done: the wall patched, the pumps added but the power left exposed, the groundwater ban unenforced. The dry months, when nothing is flooding, are the only time this coast has made a repair stick. ENSO phases follow NOAA's ONI (ERSSTv6, five-season rule). City-wide events (1996, 2002, 1997–98 rice, 1998, 2004, and 2024 dengue) are in the province file.

WHERE THE EXPERTS DISAGREE — UNRESOLVED

- **Lids and drums are the best use of a donor's money** (Philanthropist) versus **no trial shows lids save lives** (Skeptic and the verifiers). Camino Verde measured community mobilisation; Girardot measured mosquitoes. The drums are funded as part of the weekly rounds and start at one round of 270 households, which a two-week delivery test and a pupal survey in those RTs would settle.
- **Pay trigger cash on the existing cards from BTT** (Economist) versus **BTT may fund only unplanned social aid** (the finance verifier). A standing registry looks planned. A written BPKD and Inspektorat opinion settles it, and the province file asks for one by 15 November.

* Suggested formulation: check with a health worker before sharing.

- **Temephos is cost-effective** (US$313 per DALY in Cambodia) versus **do not bulk-buy without a bioassay** (Skeptic; Camino Verde's aOR 1.44). A WHO bioassay on Cilincing and Kelapa Gading larvae settles it in weeks.

WHAT NOBODY COVERED

BLIND SPOT

Who is on a well. No survey says how many North Jakarta households depend on groundwater, PAM Jaya's coverage figure has no denominator, and the RT heads hold the only lists. Nor did any lens find the raw-water engineering behind the season: the Jatiluhur level at which Jakarta's raw water is cut, and how many weeks the Buaran and Pulogadung plants have before they feel it. If that level is near today's 90.73 m, the water half of this briefing changes from network ends to the whole east of the network, and action 1 becomes the city's main water operation rather than a patch.

HOW TO READ THIS

METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale. Here the only row is the whole province (Jakarta Raya, 10.7 million people), so North Jakarta's figure is a population share. The El Niño projection covers *heat only*; drought, flood, smog, and dengue are additional to it and are carried here by the historical record rather than by a published number.

HOW THIS BRIEFING WAS PRODUCED

METHODOLOGY

- **Scope.** The location was taken as given: Kota Administrasi Jakarta Utara, DKI Jakarta (Kemendagri 31.72; 6 kecamatan, 31 kelurahan; 1,822,156 people, BPS 2026 projection). Climate Impact Lab impact region, as the report records it: GADM IDN.7_1 "Jakarta Raya", the whole province. Its row (about 260 excess heat deaths, September 2026 – February 2027; 147 in December–February) was scaled by population share (17.1%) to about 44, our arithmetic. Sub-city detail is used for hazard exposure and action design, not for death counts. Kelurahan is the finest unit named; no RW is ranked; dengue is shown no finer than kecamatan.

* Suggested formulation: check with a health worker before sharing.

- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts (51-member ensemble) applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline. The global total covers June 2026 – February 2027; country and province figures cover September 2026 – February 2027. It covers heat only and is never added to the Impact Map's long-run projections.
- **Expert panel.** Eight simulated expert lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst) each researched this place independently and in parallel, from web sources, to a fixed brief that carried the set's verified facts (PLAN.md log). A ninth agent researched the province items and the shared unit costs.
- **Local evidence.** From the project GIS base (`projects/elnino-jakarta/gis/jakarta_base.gpkg`), built from Satu Data Jakarta: BPBD flood events by kelurahan (2013–2024) and the BPBD monthly recap; Dinkes dengue by kecamatan (2024 suspected cases; 2025 incidence); Dinas SDA subsidence benchmarks (2023–2025), joined to kecamatan by location; puskesmas. Satu Data is a single-page app, so its links open the portal rather than the table.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias before it counted in an action's favour. Contradictions were kept. Actions were ranked by expected lives saved per unit of effort, each was given a named payer or marked unfunded, and the placements were reconciled against the ranked list. City-wide items were moved to the province file.
- **Verification.** Four verifier agents checked all 16 recommendations, the funding envelope, and the historical record: water and dengue; floods, coast, heat, and smog; finance and province items (with the four financial checks); and food and history. Their corrections are shown under each action.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.
- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not searchable this run: the page renders "Number of Adaptations: 0" until a country filter is applied in a browser, and the dataset is behind a download form. No action carries a checked precedent from it; this is unsearched, not "none exists".
- **Health wording.** Passages where a wording error could hurt someone (dengue danger signs and care, heat, flood safety, and drinking-water treatment) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.

* Suggested formulation: check with a health worker before sharing.

- **Rules.** No cost is derived by dividing a published total, and no local figure is invented. One exchange rate for the set: JISDOR Rp17,948 per US$ (Bank Indonesia, 15 October 2026). Every changing reading carries its date. Indonesian text for every action, funding line, and event is in `north-jakarta-utara-id.json`, not yet reviewed by a native speaker.
- **Revision.** Revised 2026-10-15 after the set audit (fixes applied: the drum floor's BAZNAS distribution-record basis (a misread fire evacuation) replaced, and the drum tiers resized to TP PKK DKI's largest one-day handout (270 / 540 / 810 households), with TP PKK DKI as delivery partner; the drums restricted to households off the PAM Jaya network, with the free 300 L tanks named; the Rp225 m cadre top-up cut and the Dasawisma wording corrected; Kamal Muara added to the water timetable; 2024 dengue figures labelled as suspected cases and Kelapa Gading ranked 3rd; `IPA-HUTANKOTA` and the 18 September cut in the status panel; the January 2014 toll raised to at least 5; the 2013 and 2015 Pluit pump statements matched to their sources; the BMKG city list and the RSUD list cited at source; the do-not cards matched to province cards JK-X04, JK-X05, JK-X08, and JK-X09; UK spelling).
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. Run-specific gaps: the Jatiluhur cut level; North Jakarta's number of fishers and its share of the province's social-card holders; a dated Kalibaru water price; KCN's 2025–26 status and the SDN 5 Marunda station; 2026 dengue counts by city; the Bapanas price panel (down for maintenance on 15 October) and Food Station's Cipinang stock (last dated June 2025); whether any DKI status has been declared since September; the drum, tank, and mask prices, which are undated retail listings.
