EL NIÑO ACTION BRIEFING · 15 OCTOBER 2026

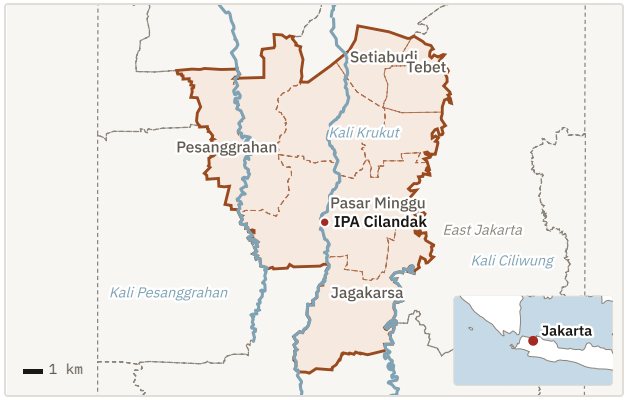

South Jakarta, Jakarta

El Niño reaches South Jakarta as dry shallow wells now, then dengue and river floods. First, put the tankers on a register and a timetable, and turn every dry well on a street with a main into a free PAM Jaya connection.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
Jakarta Raya (whole province, one row)	~54 for South Jakarta, scaled (DKI: 260)	6-month, Sep 2026 – Feb 2027	Dry wells now; dengue and Ciliwung floods from December

16/16 recommendations checked. 1 confirmed as written, 10 corrected, 0 unverified; 5 province-wide Do not cards carried from the province file. The funding target fell 46% in verification, from the panel's Rp636 m to Rp346 m, because its household scale was two to three times what the drop-point count supports; the set audit then cut the Rp60 m register-coordinator line, which duplicated the Dasawisma coordinators' fund, leaving Rp286 m. This briefing supersedes the Cilandak briefing of 14 October. Exposure: Climate Impact Lab, *451,000 at Risk*, Sep 2026, pre-peer-review, heat only. South Jakarta's ~54 is our arithmetic, not an Impact Lab finding: 260 × 2,207,857 ÷ 10,669,702 = 53.8 (Dec–Feb: 147 × the same share = 30.4).

EXECUTIVE SUMMARY — AT A GLANCE

6.27°S 106.81°E, Indonesia · BPS boundaries via OCHA COD-AB; OpenStreetMap contributors (ODbL); Natural Earth

- **The risk.** Wells failed in Cilandak and Jagakarsa in September (195 households trucked); the Ciliwung killed in Kebon Baru in 2013 and 2025.
- **First action.** BPBD Jakarta Selatan posts a dry-well register and weekly tanker timetable for five kelurahan from 1 November.
- **The money.** Rp111 m / Rp286 m / Rp571 m (US$6.2k / 15.9k / 31.8k); top placement: lidded drums for register households.
- **Do not.** Do not make deeper private bores the drought answer where a PAM main runs in the street.

* Suggested formulation: check with a health worker before sharing.

South Jakarta (Kota Administrasi Jakarta Selatan, Kemendagri 31.74; BPS 3171) has 2,207,857 people (BPS, SP2020-based 2026 projection), ten kecamatan, and 65 kelurahan. Its poverty rate, 3.23% (BPS, March 2025), is the lowest of the five mainland cities. It sits on higher ground than the coast and leans more on shallow wells, so its drought problem is the well, not the end of the pipe. The mayor is appointed and has no budget of its own: the province holds the money and PAM Jaya runs the pipes, so this briefing names the city offices (suku dinas) that do the work and leaves city-wide items to the province file (`jakarta-province-*`). It is written as a proposed draft (*draf usulan*) for the two-year review of the RPB 2023–2027 (Pergub DKI 1/2024).

The season. An El Niño dry season that is already here: it has dried shallow wells and the ends of the pipe network and held smog over the city; it is expected to delay and shorten the rains; and it does not make the January–February floods less likely. Each briefing therefore covers one season, from dry wells, smog, and heat now, through dengue bred in stored water and the floods, to March 2027.

WATER AND AIR STATUS	READING	DATE
Jatiluhur reservoir (PJT II), most of Jakarta's raw water	90.73 m, about 16 m below its normal top of about 107 m; the level at which raw water to Jakarta is cut is **not published**	15 Oct 2026, 07:55 WIB
BMKG drought early warning, South Jakarta	**Awas** (highest level; bmkg.go.id); not on the 11–20 Sep list. Dasarian III not yet issued on 15 Oct	Dasarian II, Oct 2026
PAM Jaya outage reaching South Jakarta	Pejompongan I substation work: Karet Kuningan, Karet Semanggi, Kuningan Barat, Kuningan Timur	5–6 Jun 2026 (latest found)
Tanker drops (reported, not complete)	44,000 L to 195 households in 23 RT of six kelurahan (105 in Jagakarsa); 5,000 L to Cilandak Timur	16–21 Sep 2026
Worst air reading found	No dated reading from a South Jakarta station; city-wide US AQI 177, "unhealthy" (IQAir, an AQI, not ISPU)	13 Oct 2026, 07:00
Ciliwung warning gauge	About 6–9 hours from Katulampa to Manggarai, and about 4–6 hours from Depok (BPBD DKI floodgate data); the trigger is Katulampa Siaga 2 (150 cm)	Read daily from November

* Suggested formulation: check with a health worker before sharing.

Dengue by kecamatan (Dinkes DKI via Satu Data Jakarta): 2024 suspected cases (the table's `jumlah_suspek`), Mampang Prapatan 315, Jagakarsa 304, Pasar Minggu 301, Kebayoran Lama 273, Kebayoran Baru 272, Setiabudi 261, Pesanggrahan 245, Pancoran 204, Cilandak 197, Tebet 183 (South total 2,555); incidence in 2025 per 100,000, Pancoran 130.3 (7th of DKI's 44 kecamatan) and Mampang Prapatan 125.8 (8th), the rest 40 to 77. Sudinkes Jaksel counted 1,384 cases from January to mid-November 2025, most in Pancoran (216). Kelurahan Pasar Minggu (31.74.04.1001) has a blank kecamatan in Satu Data's own list; the GIS base places it in Kecamatan Pasar Minggu. PAM Jaya publishes no service zones and its coverage figure (about 82%, July 2026) has no stated denominator, so this briefing does not estimate how many households are on wells.

WHAT CHANGED FROM THE CILANDAK BRIEFING

SUPERSEDED

This briefing replaces the Cilandak briefing of 14 October 2026, which covered one of the ten kecamatan. Its verified facts are reused here: the two Pondok Labu deaths (a riverbank house in 2016, the MTsN 19 wall in 2022), BPBD Jaksel's September tankers, PAM Jaya's free-connection offer, and Pergub 93/2021. Five of its statements are corrected:

- South Jakarta was **not** on BMKG's 11–20 September *Awas* list. BMKG put West, Central, East, and North Jakarta and Kepulauan Seribu at *Awas* for 11–20 September (BPBD DKI, via Kompas TV, 14 Sep); South Jakarta was not listed. BMKG's September bulletin is no longer online, and one report differs. South **is** at *Awas* in October dasarian II (bmkg.go.id); dasarian III had not been issued by 15 October.
- Indonesia's Impact Lab figure of 19,300 is for September–February, not June–February. This briefing uses the province row (260) instead.
- Cilandak's population of 229,601 is not a BPS figure; BPS gives 220,968 (2024).
- DKI's 2024 dengue is 9,156 cases and 17 deaths to week 22, not 9,261 and 22.
- Under NOAA's ONI ERSSTv6, 2019–20 is an El Niño year (Cilandak called the 2020 flood neutral) and 2025–26 is neutral.

Cilandak's two open items: **PAM Jaya's reach in the dry-well neighbourhoods** is still unpublished. Action 2 turns it into a street-by-street refusal log; the 2014 IPA Cilandak shutdown and the 2016 pipe works show mains in Cilandak Barat, Cipete, and Lebak Bulus, and a Pondok Pinang resident was refused in 2023 as "too far from the pipe" (search result only). **BMKG's October status** is now answered above. Cilandak's action to add DKI to IFRC's drought operation was dropped (fully funded, low odds), and its wiring-check action is left to the fire service.

* Suggested formulation: check with a health worker before sharing.

WHAT THIS PLACE SHOULD DO RANKED

Ranked by expected lives saved per unit of effort before and through the peak. Backing lenses are shown per action. Convergence was checked for shared bias. Each action carries the RPB's columns: owner, place, target, date, and source of funds.

1. From 1 November, replace call-in tanker drops with an RT-by-RT dry-well register and a posted weekly timetable for Pondok Labu, Cilandak Barat, Cilandak Timur, Jagakarsa, and Lenteng Agung

PARTIALLY CONFIRMED | EMERGENCY · FRONTLINE · PHILANTHROPIST · ECONOMIST | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Selatan, with PAM Jaya, the kelurahan and RT heads, and PKK and jumantik cadres	Register and timetable posted 1 Nov 2026; weekly until the rains are clearly back	Water free (BPBD, PAM Jaya); register kept by RT heads and Dasawisma coordinators, already funded; drop-point tanks under action 3 (F02)	Water going to whoever posts loudest; renters and elders going short in silence

In mid-September complaints from Cilandak went viral, and on 16 September BPBD Jaksel sent a 5,000 L tanker to Pondok Labu and Cilandak Barat, where wells are mostly under 20 m deep and old. By 19 September it had delivered 44,000 L to 195 households in 23 RT of six kelurahan, 105 of them in Jagakarsa, from lists the neighbourhood administrators compiled. On 21 September, 6 of the 15 RT in one Cilandak Timur RW (RW 01, per its chair) were dry (46 households); people fetched water from the musala and relatives. Pondok Labu rations its shared well, "especially for kos-kosan", so renters are cut first. The register records, for each household, the well's state, whether a PAM main runs in the street, owner or renter, and the dated price paid for water. Names stay with the RT; counts go to BPBD and feed action 2. Plan on at least 15 L per person per day, Sphere's survival floor, not a target.

Corrections: the iNews report names no kelurahan; the five listed here come from the 16, 21, and 25 September reports ("Jagakarsa" may mean the kecamatan). The Cilandak Timur delivery was by BPBD DKI; the 15 RT are one RW (RW 01, per its chair), not the whole kelurahan. The register is kept by the RT heads and the Dasawisma group coordinators, whose operational fund the province already pays

* Suggested formulation: check with a health worker before sharing.

(Rp750,000 a month under Kepgub 497/2025, from 1 September 2025); the panel's paid coordinators were cut in the set audit. Province rule: action JK-03 (posted schedules and a "boil before drinking" label in every city). Plants: the 2014 IPA Cilandak shutdown reached these kelurahan (`IPA-CILANDAK`); the feed is otherwise unpublished.

2. By 30 November, take PAM Jaya free-connection applications door to door in every register RT with a main in the street, log every "too far from the pipe" refusal by street, and test the wells households go back to

`PARTIALLY CONFIRMED` `ECONOMIST · FRONTLINE · SKEPTIC · PHILANTHROPIST` `ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN` `PHASE: PRA-BENCANA`

OWNER	BY WHEN	COST	PREVENTS
PAM Jaya, with the kelurahan, RT heads, and cadres; Sudin Kesehatan for well tests	Every register RT visited by 30 Nov 2026	PAM Jaya's own budget; Rp35,000 refundable deposit per household	The same RTs needing tankers every dry season, and drinking from contaminated wells

Since 2025 PAM Jaya has waived the connection fee for homes under 70 m² (tariff groups 2A1 and 2A2; terms as reported by RMOL, 17 September 2025) and for social facilities. The household brings a KTP, a KK, and a PBB or domicile letter, and pays a Rp35,000 deposit that is refunded if it stops subscribing; larger homes pay Rp627,500. In July 2026 PAM Jaya's president director said these connections remain free. Once connected, low-income households can get Kartu Air Sehat (Rp1,000/m³ for 2A1, and one free tanker a month in an outage) and a free 300 L tank from PAM Jaya and TP PKK DKI (target 2,000 in 2026, mainly for 2A1 and 2A2 customers with buildings under 70 m²). The well test matters: on 3 February 2026 PAM Jaya's director said South Jakarta well water tested in its lab "looks clear but is contaminated", blaming wells sited too close to septic tanks. IPA Pesanggrahan (opened September 2025, 750 L/s) now serves Pesanggrahan, Kebayoran Lama, and Kembangan in West Jakarta, so the west of the city has new capacity to connect to.

* Suggested formulation: check with a health worker before sharing.

Corrections: no end date or legal instrument for the free connection is published; confirm on 1500 223 before the drive. Kartu Air Sehat began as a one-year scheme "that can be extended"; no extension notice was found, and it goes only to existing customers, so it follows the connection, not the door knock. The lab finding names no organism, distance, or share. Boiling removes germs, not nitrate. Connections in 2025: 206,537 (CNBC) against a MURI-certified 72,666 that counts something else. Plants: `IPA-CILANDAK`, `IPA-PESANGGRAHAN` (a new code on the schema pattern).

3. From November, put a tight lid on stored water in every register household and at every tanker drop point, and run weekly cover-and-scrub rounds there and in Pancoran and Mampang Prapatan

PARTIALLY CONFIRMED | PHILANTHROPIST · PUBLIC HEALTH · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Selatan and the puskesmas kecamatan, with PKK and jumantik cadres; BAZNAS (BAZIS) DKI buys, TP PKK DKI delivers	**195 households and 23 drop points by 15 Dec 2026; rounds weekly to March 2027**	**Rp286 m at target: drums Rp198 m (F01), tanks Rp88 m (F02)**	**Drought storage becoming the dengue peak, which usually comes in March to May**

Every container filled this dry season is a breeding site when the rains come. Two lidded 160 L drums (about Rp198,000 each, the province's shared unit cost) hold about five days for a family of four, enough to bridge weekly tanker runs; one closed 500 L tank (about Rp1.46 m) goes to each drop point, owned by the RW committee. Households that connect under action 2 can get the free 300 L PAM Jaya and TP PKK tank instead. Pancoran and Mampang Prapatan had South Jakarta's highest dengue incidence in 2025 and Pancoran the most cases, so the rounds start there. The best trial evidence is Camino Verde (BMJ 2015; Nicaragua and Mexico): community mobilisation without insecticides cut recent dengue infection in children by 29.5% (95% CI 3.8–55.3).

Corrections: Camino Verde mobilised households; it did not hand out lids, so the lids support the rounds rather than stand alone. The register skips households that already have 320 L of lidded storage. BAZNAS (BAZIS) DKI is the channel; the floor is a pilot of 195 households (an assumption, not a recorded capacity), the households on BPBD's September list. TP PKK DKI is the delivery partner: with PAM Jaya it handed out 520 free 300 L tanks in three rounds, Jan–Apr 2026 (270 in North in one day). Those free tanks go to PAM Jaya

* Suggested formulation: check with a health worker before sharing.

customers, mainly 2A1 and 2A2 households under 70 m², and none was reported in South Jakarta by July 2026, so the drums, for households on wells, do not duplicate them. Prices are undated retail listings: release money against a supplier quote. Province rule: action JK-02.

4. By 15 December, turn a Katulampa Siaga 2 (150 cm) into a door-to-door and loudspeaker evacuation of the Ciliwung kelurahan before the water arrives, with a life jacket on every child in every boat and power cut before boats launch

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
BPBD Jakarta Selatan and the lurah; RT heads, PMI Jakarta Selatan, and mosques; PLN consulted	**Drill in all eight kelurahan by 15 Dec 2026**	**Staff time; life jackets not costed (unfunded)**	**Drowning and electrocution during rescue, the way South Jakarta's Ciliwung deaths happened**

The kelurahan are Pejaten Timur, Rawajati, Tanjung Barat, Pengadegan, Kalibata, Kebon Baru, Bukit Duri, and Manggarai. On 3 March 2025 Pejaten Timur flooded 350–370 cm deep and Rawajati 100–220 cm. The river gives about 6–9 hours from Katulampa to Manggarai, and about 4–6 hours from Depok (BPBD DKI floodgate data; Balekambang went from Depok Siaga 1 to 1.5 m in about 4 hours on 4 March 2025), enough to leave on foot if the alarm goes at Katulampa Siaga 2 (150 cm). One RT in Kebon Baru has lost two people in rescues twelve years apart: in January 2013 a member of a SAR team who lived there was found dead on the Ciliwung bank at Bukit Duri, and on 4 March 2025 a two-year-old from the same RT drowned when a volunteer rubber boat carrying evacuees capsized in the current. So the danger is the boat across the current, not the waiting: leave before the peak, put a life jacket on every child, and have the RT ask PLN (123) to cut the substation (*gardu*) before boats launch. In the January 2013 flood, BNPB counted 5 electrocution deaths among the first 11 (18 Jan), 6 of 14 a day later.*

* Suggested formulation: check with a health worker before sharing.

Corrections: the 2013 victim is described as a SAR team member, not a volunteer; PLN cuts by substation, not by RT (308 substations on 23 February 2020); no Jakarta rule on life jackets for volunteer boats was found. In Rawajati in 2020 the lurah urged people to leave early; most left only when water was 30–40 cm indoors. BNPB said in 2017 that Ciliwung residents are hard to move until the water is dangerous. Satu Data lists flood shelters only in Pengadegan, Rawajati, Manggarai, Kebon Baru, and Pejaten Timur.

5. By 30 November, clear the Krukut and Mampang drains from Petogogan down, order owners in writing to repair every wall and private embankment leaning on a channel, stage the two new mobile pumps, and name shelters west of the Ciliwung

PARTIALLY CONFIRMED | EMERGENCY · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin SDA Jakarta Selatan, with Sudin Citata (building orders), the kelurahan, and the schools' authorities	**Drains and walls by 30 Nov 2026; pumps staged by 15 Dec**	**Existing dredging and operations lines**	**Walls falling on people in the first storms; a repeat of Petogogan's January flood**

The order is Petogogan, Pela Mampang, Kuningan Barat, Bangka, Cilandak Timur, and Pondok Labu. On 23 January 2026, 66 South Jakarta RT flooded, 26 of them in Petogogan; Pela Mampang (75 cm) and Ulujami (70 cm) followed. Petogogan, Cipulir, Pondok Pinang, and Bangka flooded in all ten years of BPBD's 2013–24 record. The deaths on this side of the city came from walls: a Krukut-bank house in Pondok Labu (2016, one dead) and the MTsN 19 wall (2022, three pupils), which fell because a clogged drain held about 1 m of water against it. On 30 October 2025 a cracked private embankment at Kemang Village flooded Bangka and Pela Mampang, and the governor ordered the owner to repair it; do the same, in writing, for every wall that holds back a channel. Sudin SDA received two new mobile pumps (40,000–60,000 L/min) on 26 August 2026; stage them at Petogogan and Ulujami before the rains, not after.

* Suggested formulation: check with a health worker before sharing.

Corrections: the pump sites are this briefing's proposal; Dinas SDA named none. Krukut normalisation needs about Rp344 bn for land in Petogogan and Pela Mampang and begins with land purchase in 2026, so it will not reduce this season's floods. A madrasah answers to Kemenag; the city can inspect and advise, not close it.

6. By 30 November, every puskesmas kecamatan triages dengue warning signs, with written referral routes for Pancoran and Setiabudi, which have no RSUD, and for Cilandak to RSUP Fatmawati

PARTIALLY CONFIRMED | PUBLIC HEALTH · EMERGENCY | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin Kesehatan Jakarta Selatan; the ten puskesmas kecamatan; the RSUD; RSUP Fatmawati consulted	**30 Nov 2026, with drills in December**	**Staff time and stock in existing budgets; not costed**	**Dengue cases becoming deaths in the peak**

Before March, South Jakarta can do little about how many people catch dengue; it can do a great deal about how many die. Indonesia's dengue case fatality rate fell from 0.9% in 2021 to 0.42% in 2025 (Kemenkes): the difference is case management. Use the Kemenkes clinical guidelines (PNPK), which follow WHO 2009: recognise the warning signs, monitor haematocrit, give fluids, refer early. South Jakarta's RSUD are in Pasar Minggu, Jati Padang, Mampang Prapatan, Tebet, Kebayoran Baru, Kebayoran Lama, Pesanggrahan, and Jagakarsa. Pancoran, with the city's highest incidence, has none, so write its route now (to RSUD Tebet or RSUD Mampang Prapatan); Setiabudi likewise; Cilandak refers to RSUP Fatmawati. From January, after floods, the same alert covers leptospirosis: early doxycycline for fever after floodwater exposure (province action JK-06).*

* Suggested formulation: check with a health worker before sharing.

Corrections: Jagakarsa does have an RSUD (Jl. M. Kahfi), so it is not among the gaps. The Pancoran routes are this briefing's proposal; no Sudinkes referral map was found. A dengue vaccination monitoring programme for primary-school children runs in South Jakarta (FKUI, Dinkes DKI, Takeda; September 2025), with no kecamatan or dose count published. No 2026 dengue count by kecamatan is published.

7. From November, cadres check weekly on elders with hypertension or diabetes, and daily on 34 °C days or when the air is "tidak sehat", each elder with two named neighbours who also move them in a flood

PARTIALLY CONFIRMED | PUBLIC HEALTH · FRONTLINE | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
The puskesmas kecamatan, with PKK and posbindu cadres, mosques, and RT heads	Two neighbours named by 30 Nov 2026; checks to March 2027	Cadre time; Dasawisma coordinators already have a provincial operational fund	Heat, smog, and flood deaths among isolated chronic patients

Heat is the one hazard with a number: about 54 excess heat deaths for South Jakarta from September to February, by our scaling of Impact Lab's province row. Jakarta reached 35.6 °C at Halim on 14–15 March 2026. The smog is worsened by a dry El Niño season, not caused by it: on 13 October 2026 the city read US AQI 177 at 07:00 (IQAir). South Jakarta's provincial reference station is DKI3 Jagakarsa; other SPKU sensors are on udara.jakarta.go.id. The visit covers water, medicines (diuretics stay with puskesmas clinicians), signs of heat illness, and from December the dengue warning signs. The same two neighbours move the elder in a January–February flood. BMKG has no formal heat warning for Jakarta, so the trigger is its daily maximum forecast or the nearest station (province action JK-07).*

* Suggested formulation: check with a health worker before sharing.

Corrections: the evidence for check-ins (the Ahmedabad heat plan, Hess et al. 2018) is from dry heat above 43 °C and did not use neighbour checks; treat this as a low-cost measure, not one with a proven effect here. DKI3 is the reference station, not the only sensor. No dated reading from a South Jakarta station was found for August–October 2026. The Rp750,000 a month under Kepgub 497/2025 is an operational fund for Dasawisma group coordinators, from 1 September 2025, not pay to every cadre; jumantik receive about Rp500,000 a month (a 2015 provincial plan). So no top-up is proposed.

8. By 1 December, post two separate notices in every kelurahan office and RT WhatsApp group: where cardholders collect subsidised food, and where anyone can buy SPHP rice at Rp12,500/kg

PARTIALLY CONFIRMED | FOOD SUPPLY | ADAPTATION INVENTORY: NOT SEARCHABLE THIS RUN | PHASE: PRA-BENCANA

OWNER	BY WHEN	COST	PREVENTS
Sudin KPKP Jakarta Selatan, with the kelurahan; Pasar Jaya and Bulog DKI consulted	**1 Dec 2026**	**Staff time**	**Households paying record rice prices when a cheaper channel exists**

The food signal here is weak: South Jakarta is the least poor city, and its risk is the province-wide rice price (a record Rp15,769/kg in September 2026, forecast to rise through March). DKI's subsidised food (*pangan bersubsidi*) is only for cardholders (KJP Plus, Kartu Lansia, PJLP, people with disabilities, and others), booked online the day before or on the spot from 14:00 to 17:00, and since 2026 run by Pasar Jaya, Food Station, and Dharma Jaya. SPHP rice is a separate Bulog channel open to anyone: at Pasar Minggu on 20 February 2026 it sold at Rp12,500/kg against about Rp13,500 for medium rice. Two notices, because the two channels are confused (province action JK-09).

Corrections: the draft said the queue was online only; it is not. A list of South Jakarta pickup sites was not found, which is the point of the notice.

WHAT THE PROVINCE DOES FOR SOUTH JAKARTA — WRITTEN ONCE

These items are city-wide, so they are written once in the province file (`jakarta-province-*`, code JK) and not priced here.

* Suggested formulation: check with a health worker before sharing.

- **JK-01, the decree.** BMKG's Awas trigger has fired for South Jakarta in October, but DKI had declared no status by 15 October. A Keputusan Gubernur declaring siaga darurat kekeringan lets BTT be shifted (by pergeseran) into water lines and opens a request for BNPB Dana Siap Pakai (Perban BNPB 4/2020); only tanggap darurat opens BTT's direct release.
- **JK-02, the line on every notice:** "tutup wadah air, kuras dan sikat seminggu sekali". **JK-03**, posted tanker schedules and "boil before drinking" labels. **JK-04**, PAM Jaya and PJT II publish the Jatiluhur level at which Jakarta's raw water is cut.*
- **JK-05, trigger cash:** one rule, Rp300,000 once per household per declared status, at most twice a season, through Bank DKI, after a written BPKD and Inspektorat opinion.
- **JK-06 to JK-09:** the dengue and leptospirosis clinical alert, same-day smog and heat alerts, the PLN rule for pump power, and SPHP rice outlets. **JK-10 to JK-12**, asks to central government: rice aid for January–March 2027, Dana Siap Pakai, and Wolbachia (this briefing adds Pancoran and Mampang Prapatan as candidates for 2027).

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal.

Action	Wali kota	BPBD Jaksel	PAM Jaya	Sudin SDA Jaksel	Sudin Citata Jaksel	Sudin Kesehatan Jaksel	Puskesmas kec.	PKK & jumantik cadres	RSUD & RSUP Fatmawati	BAZNAS DKI	Kelurahan & RT	PMI Jaksel	Mosques & community groups	PLN	Sudin KPKP Jaksel
1. Dry-well register and tanker timetable	I	A	R					R			R				
2. Free connections, refusal log, well tests		C	A			C		R			R				
3. Lids, tanks, cover-and-scrub rounds		I				A	R	R		R	C				
4. Ciliwung evacuation on the gauge	I	A									R	R	R	C	
5. Krukut drains, walls, pumps, shelters	I	C		A	R						R				
6. Dengue triage and referral						A	R		R						
7. Elder check-ins, two neighbours						C	A	R					R		
8. Subsidised food and SPHP notices											R				A

What the chart shows: the kelurahan and RT heads are responsible in five of the eight actions, so the lurah's monthly meeting is where this plan lives or dies. BPBD Jakarta Selatan is accountable for the two actions that start first (1 and 4), and Sudin Kesehatan and the puskesmas for three more. Not shown as columns: the schools' authorities (Sudin Pendidikan, Kemenag; consulted on 5), Dinkes DKI (consulted on 6), and Pasar Jaya and Bulog DKI (consulted on 8). Only action 3 needs outside money; only action 1 needs a new routine.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR

Rp110.8 m (~US$6,200): drums for a 195-household pilot and 23 drop-point tanks

TARGET

Rp285.6 m (~US$15,900)

CEILING

Rp571.2 m (~US$31,800)

LARGEST UNCERTAINTY

How many South Jakarta households are on wells that are now dry; no survey exists

Floor = Rp77.22 m (a pilot of 195 households × 2 drums) + Rp33.58 m (23 drop points) = Rp110.8 m. Target = Rp198 m (500 households) + Rp87.6 m (60 points) = Rp285.6 m. Ceiling = Rp396 m (1,000 households) + Rp175.2 m (120 points) = Rp571.2 m. The household tiers follow

* Suggested formulation: check with a health worker before sharing.

the drop points at about 8.5 households per RT, the ratio in BPBD's September list. Rate: JISDOR Rp17,948 per US$ (15 October 2026). **All amounts are readiness money; none is committed.** The target fell 46% in verification, from the panel's Rp635.75 m: its 1,000 and 3,000-household tiers were two to three times what its own drop-point count supported, and jerrycans at flood shelters were dropped (no evidence of need). The set audit then cut the Rp60 m register-coordinator grant (F03; target Rp345.6 m → Rp285.6 m): it paid people to keep a list, which buys nothing the Dasawisma coordinators' operational fund (Kepgub 497/2025, Rp750,000 a month from 1 September 2025) and the RT heads do not already cover, as Central found for its own stipend. Not counted: the province trigger-cash line JK-F01; water delivered free by BPBD and PAM Jaya; PAM Jaya's free connections and the free 300 L tanks from PAM Jaya and TP PKK DKI. **Public money:** the 2027 APBD ceilings were fixed when the KUA-PPAS was signed on 13 August 2026, and the RAPBD 2027 (Rp82.89 tn) was tabled on 13 October. None of these actions is a new APBD 2027 line. Public money for them can come only by reallocation within existing suku dinas lines during the deliberations, from the 2026 BTT on a declared status (by pergeseran under siaga darurat), from the APBD-P 2027, or from BNPB Dana Siap Pakai.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
BAZNAS (BAZIS) DKI, delivered by TP PKK DKI through the kelurahan PKK and jumantik cadres	Two lidded 160 L drums for each register household without lidded storage (action 3)	Rp77.2 m / 198 m / 396 m	Pre-positioned stock	195 / 500 / 1,000 households × 2 × Rp198,000 (undated retail); the floor is a pilot of 195 households (an assumption, not a recorded capacity). TP PKK DKI, with PAM Jaya, handed out 520 free 300 L tanks in three rounds, Jan–Apr 2026 (270 in North in one day). Two drums hold about 5 days for four people at 15 L a day. Camino Verde: −29.5% infection through mobilisation	Partially confirmed
BAZNAS (BAZIS) DKI, with the RW committee as each tank's owner	One closed 500 L tank at each tanker drop point (actions 1 and 3)	Rp33.6 m / 87.6 m / 175.2 m	Pre-positioned stock	23 / 60 / 120 points × Rp1.46 m. BPBD fills residents' own containers and hands out none	Confirmed

The funder's one thing: in South Jakarta the cheapest water is already priced. A connection costs a household a refundable Rp35,000, and a private tanker costs about Rp106,000/m³ (our arithmetic from the province's comparison price) against Rp1,000/m³ on Kartu Air Sehat. Grant money should buy the lid and the list, not the pipe or the water; the list is what turns September's 195 households into connections before next year's dry season.

* Suggested formulation: check with a health worker before sharing.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives, money, or the window here. Cards 1 to 5 are province-wide (written once as JK-X01 to JK-X05); cards 6 to 8 are South Jakarta's own versions of province cards JK-X08 (deep wells), JK-X10 (infiltration wells), and JK-X09 (clearing kampung).

Do not stand the response down when the rains return

CONTRAINDICATED

The first heavy rain is the handover, not the end. Water stored for the drought becomes breeding stock within one to two weeks, and DKI's dengue usually peaks in March to May. South Jakarta's Ciliwung killed in a neutral year (2013) and in March 2025, and its walls fell in August and October storms.

Instead: keep the tankers, rounds, triage, and evacuation drills running to March 2027; stand down on falling dengue cases, not on rainfall.

Do not make fogging the visible dengue response, and do not bulk-buy temephos without a bioassay

CONTRAINDICATED

Jakarta *Aedes aegypti*, including from Kebayoran Lama and Kebayoran Baru, resist permethrin, the fogging class (Hamid et al., PLoS ONE 2017). Kemenkes asks for fogging only after a case investigation. South Jakarta larvae were last tested for temephos by WHO bioassay in 2006.

* Suggested formulation: check with a health worker before sharing.

Instead: fog only on a case investigation; put the effort into lids and weekly scrubbing (action 3); choose any larvicide after a WHO bioassay.

Do not tell households to "store water" without "cover it, drain and scrub it weekly"

CONTRAINDICATED

Aedes eggs stick to container walls and survive draining. Storage advice alone multiplies breeding sites in exactly the RTs on the dry-well register.

Instead: every notice and tanker drop carries the whole line (province action JK-02).

Do not present tanker, well, or refill-depot water as drinking water *

CONTRAINDICATED CORRECTED

PAM Jaya's director said in February 2026 that South Jakarta well water tested in its lab "looks clear but is contaminated", with septic tanks too close. No tanker water-quality data was found, and drums filled from tankers sit for days. Refill depots are not safe by default: Satpol PP closed depots in South and West Jakarta on 10–11 December 2025 after E. coli findings. The province card (JK-X04) covers tanker, well, refill-depot, and boat-delivered water.

Instead: label it "air bersih, bukan air minum: rebus dulu"; drink boiled or gallon water; test the wells (action 2).

Do not answer smog with road spraying, misting, mist generators, cloud seeding, or odd-even rules

CONTRAINDICATED

The health minister said in August 2023 that road spraying only moves pollution, yet DLH was still misting on Jl. Fatmawati and TB Simatupang in September 2025. Misting and each mist generator spend water in a drought. Cloud seeding needs clouds that a dry El Niño season does not bring. Odd-even traffic rules (*ganjil-genap*) are not a smog response: they do nothing for the people breathing the air on a bad day (province card JK-X05).

* Suggested formulation: check with a health worker before sharing.

Instead: protect people indoors on bad days (action 7) and target the sources.

Do not make deepening private bores the drought answer where a PAM main runs in the street

CONTRAINDICATED CORRECTED

RCTI+ reported on 16 September 2026 that local government in several areas provides the means to deepen household bores, with the owner supplying only the site and a storage tank. A deeper bore draws on the same falling aquifer (South's benchmarks sink about 2.3 to 3 cm a year), ties the household to well water that PAM Jaya's lab found contaminated, and competes with a connection that costs a refundable Rp35,000.

Instead: the free connection where a main exists (action 2), scheduled tankers and closed storage now (actions 1 and 3), and a shared RW well, as Pondok Labu built, only where there is no main.

Do not present deep infiltration wells (sumur resapan) as protection against river flooding in Cipulir

CONTRAINDICATED CORRECTED

In May 2026 the mayor announced 100 infiltration wells about 30 m deep at Seskoal, Cipulir, funded by CSR, against floods and subsidence. The province built 2,974 of a 1.8 million target by 2020; the DPRD zeroed the line for 2022; wells in Lebak Bulus were linked to cracked roads in 2021. Cipulir flooded in all ten recorded years, largely from the Pesanggrahan overtopping its banks, which no well absorbs.

* Suggested formulation: check with a health worker before sharing.

Instead: wells may help with local ponding; for the river, put the money into pumps, channel clearing, and warning Cipulir and Ulujami (action 5).

Do not tell Bukit Duri and Kebon Baru they are protected by the Ciliwung normalisation, or use it to justify clearing kampung

CONTRAINDICATED

Bukit Duri was demolished from 29 September to 3 October 2016 while the case was in court; the administrative court ruled the warning letters unlawful on 5 January 2017. Six weeks later Bukit Duri flooded thigh- to waist-deep with no permanent pump, because the works were unfinished. The Bukit Duri package (4.45 km) is a 2027–28 multi-year contract and Kebon Baru's (2.83 km) is in the 2026–27 multi-year contract, so neither is finished, or protects anyone, this season.

Instead: pre-position mobile pumps and confirm shelters there (actions 4 and 5); map no finer than the kelurahan; promise that evacuating means coming home.

WHAT HAS HAPPENED HERE BEFORE — THE RECORD

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Feb 2007	Jakarta flood, in a weak El Niño	No South Jakarta count found (48 in DKI; Bappenas)	Flood-control works planned
Jan 2013	Ciliwung and Krukut flood (neutral)	4 dead in BPBD's record: Kebon Baru 2, Petogogan 1, Kalibata 1; 2,127 displaced on 16 Jan	Normalisation of the Ciliwung pushed
Jan 2014	Flood reaches IPA Cilandak; the plant stops (neutral)	No deaths found; piped water cut in about two dozen kelurahan	Nothing found

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Aug 2016	Krukut floods: a riverbank house falls in Pondok Labu; Kemang flash flood (neutral)	1 dead (Pondok Labu); none in Kemang	Officials blamed residents
Sep–Oct 2016	Bukit Duri cleared for normalisation; court later rules the letters unlawful	Not applicable	Bukit Duri floods again in Feb 2017
Jan 2020	New Year flood, 377 mm at Halim (El Niño under ONI v6)	5,080 displaced in South; no death in BPBD's record (one unconfirmed in BNPB's)	Nothing specific
Feb 2021	Ciliwung flood (La Niña)	243 families evacuated in Pejaten Timur	PMI Jaksel kitchen
Oct 2022	MTsN 19 wall falls in Pondok Labu; a clogged drain held water against it (La Niña)	3 pupils dead	Krukut normalisation promised; land still being bought
Mar 2025	Ciliwung flood; Pejaten Timur 350–370 cm (neutral)	1 child drowned in Kebon Baru when an evacuation boat capsized	Nothing found
Oct 2025	Private embankment at Kemang Village cracks; Bangka and Pela Mampang flood (neutral)	No deaths reported	Owner ordered to repair
Jan 2026	Krukut, Mampang, and Pesanggrahan flood (neutral)	66 RT under water, 26 in Petogogan; no deaths found	Two mobile pumps per city, Aug 2026
Sep 2026	Shallow wells fail in Cilandak and Jagakarsa (El Niño)	No deaths reported; 195 households trucked	Water on request; no status declared

The recurrence nobody has noticed: South Jakarta's flood deaths come in two forms that deep water does not explain. On the Ciliwung, people die during the rescue, a SAR team member in 2013 and a child in an evacuation boat in 2025, both from one RT in Kebon Baru. On the Krukut, they die under walls that hold back water a blocked drain has trapped. Both are fixed in the dry months: by leaving before the peak, and by clearing the drain behind the wall. ENSO phases follow NOAA's ONI (ERSSTv6, five-season rule; a month takes the season centred on it): August

* Suggested formulation: check with a health worker before sharing.

2016 and March 2025 are neutral, because v6 has no La Niña in 2016 or in 2024–25. City-wide events (1996, 2002, 1997–98 rice, 1998, 2004, and 2024 dengue) are in the province file.

WHERE THE EXPERTS DISAGREE — UNRESOLVED

- **Buy drums for dry-well households** (Philanthropist) versus **connect them to the pipe** (Economist and Skeptic). Both stand: the drum is this season, the connection is every season after. The register (action 1) decides which household gets which, by whether a main runs in its street.
- **Help households deepen their bores** (the current local practice, as reported) versus **never** (Skeptic). The verifier softened it: where there is no main, a shared RW well is a fallback; where there is a main, a deeper private bore competes with a Rp35,000 connection.
- **Lids save lives** (Philanthropist) versus **no trial shows it** (the verifiers). Camino Verde measured mobilisation, not lids. The drums are funded as part of the weekly rounds, which a pupal survey in the first RTs would test.

WHAT NOBODY COVERED — BLIND SPOT

Who is on a well, and where the mains stop. No survey counts South Jakarta's well households, PAM Jaya publishes neither service areas nor a map of its mains, and its coverage figure has no denominator. So the briefing cannot say whether September's 195 households are the edge of the problem or its tip; the only signal is that BMKG moved South from not listed to *Awas* between September and October. Nor did any lens check electricity: shallow wells run on electric jet pumps, so a household with a working well can still lose water in an outage. If the refusal log (action 2) shows long streets without a main, the drought half of this briefing becomes a pipe-extension question for PAM Jaya's 2027 plan.

HOW TO READ THIS — METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale. Here the only row is the whole province (Jakarta Raya, 10.7 million people), so South Jakarta's figure is a population share. The El Niño projection covers *heat only*; drought, flood, smog, and dengue are additional

* Suggested formulation: check with a health worker before sharing.

to it and are carried here by the historical record rather than by a published number.

HOW THIS BRIEFING WAS PRODUCED

METHODOLOGY

- **Scope.** The location was taken as given: Kota Administrasi Jakarta Selatan, DKI Jakarta (Kemendagri 31.74; BPS 3171; 10 kecamatan, 65 kelurahan; 2,207,857 people, BPS 2026 projection). Climate Impact Lab impact region: GADM IDN.7_1 "Jakarta Raya", the whole province. Its row (about 260 excess heat deaths, September 2026 – February 2027; 147 in December–February) was scaled by population share (20.7%) to about 54, our arithmetic. Kelurahan is the finest unit named; RW appear only in text from a source and are never ranked; dengue is shown no finer than kecamatan.
- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline. The global total covers June 2026 – February 2027; country and province figures cover September 2026 – February 2027. It covers heat only.
- **Expert panel.** Eight simulated lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian with food supply chain, philanthropist, and a status researcher for the dated readings and plant feeds) researched South Jakarta in parallel from web sources, to a fixed brief carrying the set's verified facts (PLAN.md log) and the Cilandak briefing's corrections. Province facts were reused, not re-researched.
- **Local evidence.** From the project GIS base (`projects/elnino-jakarta/gis/jakarta_base.gpkg`), built from Satu Data Jakarta: BPBD flood events by kelurahan (2013–2024), Dinkes dengue by kecamatan (suspected cases 2024, incidence 2025), Dinas SDA subsidence benchmarks (South medians 3.0, 2.3, and 2.6 cm a year in 2023–25), puskesmas, and flood evacuation sites. Satu Data is a single-page app, so its links open the portal rather than the table.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias. Contradictions were kept. Actions were ranked by expected lives saved per unit of effort, each was given a payer or marked unfunded, and the placements were reconciled against the ranked list. City-wide items were left to the province file.
- **Verification.** Three verifier agents checked all 16 recommendations, the funding envelope, and the record: water, food, and the bore card; floods, health, heat, and the two other local cards; and the funding envelope (recipients, duplication, and scale). Their corrections are shown under each action.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.

* Suggested formulation: check with a health worker before sharing.

- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not searchable this run: the page renders "Number of Adaptations: 0" until a country filter is applied in a browser, and the dataset is behind a download form. No action carries a checked precedent from it; this is unsearched, not "none exists".
- **Health wording.** Passages where a wording error could hurt someone (dengue danger signs and care, heat, flood safety, and drinking-water treatment) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented. One exchange rate for the set: JISDOR Rp17,948 per US$ (Bank Indonesia, 15 October 2026). Every changing reading carries its date. Indonesian text for every action, funding line, and event is in `south-jakarta-selatan-id.json`, not yet reviewed by a native speaker.
- **Revised 2026-10-15 after the set audit** (fixes applied: the BAZNAS household-distribution basis deleted and the drum floor restated as a 195-household pilot with TP PKK DKI as delivery partner; free tanks 300 L, target 2,000; 2024 Satu Data dengue as suspected cases; Dasawisma wording; the Rp60 m coordinator grant F03 cut, envelope recomputed; ENSO for Aug 2016 and Mar 2025 set to neutral; Ciliwung lead time and the Katulampa Siaga 2 trigger; the September and October BMKG *Awas* sources; the 2013 electrocution count; the Kebon Baru contract; Cilandak Timur as one RW; the source for the free-connection terms; do-not cards tied to JK-X04, JK-X05, and JK-X08 to JK-X10; UK spelling).
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. Run-specific gaps: BMKG's dasarian III warning (not yet issued); the Jatiluhur cut level; PAM Jaya's mains in the dry-well streets and whether its free connection and Kartu Air Sehat continue (no published end or extension); the six kelurahan BPBD served; a dated South Jakarta water price; a dated South Jakarta air-station reading; a South death count for 2007 and 2020; IPA Cilandak's raw-water source; the drum and tank prices, which are undated retail listings. Several sites returned 403 (Tirto, rm.id, Bisnis); claims seen only in search results are marked as such.
