EL NIÑO ACTION BRIEFING · 14 OCTOBER 2026

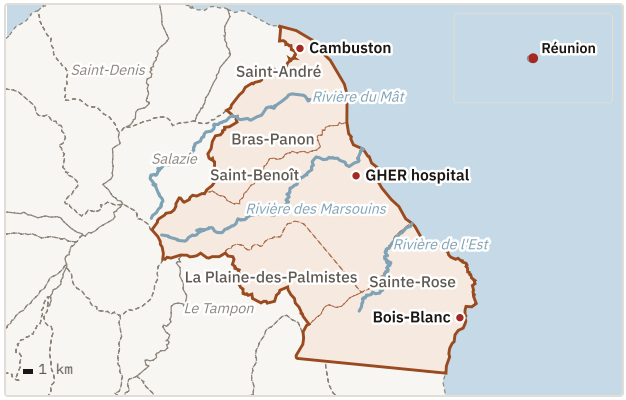

East (CIREST), Réunion

Not an El Niño drought: a record carried-over water deficit, leaking networks, heat, mosquito-borne disease bred in stored water, leptospirosis, and cyclones that become water outages, in a hot El Niño year. Here, a cyclone becomes a power cut at the boreholes, then a water cut that lasts a week, so the first job is backup power that has been proven to work.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
All Réunion (one region); figure for the Saint-Benoît arrondissement, less Salazie	About 0.9 by population share (arrondissement: 1; Réunion: 5)	6-month, Sep 2026 – Feb 2027	Water outages after cyclones; leptospirosis after rain

19/19 recommendations checked. 0 confirmed as written, 9 corrected, 0 unverified; 10 contraindicated (the *Do not* cards, one of them a financial action the panel proposed). The funding target fell 22%, from the panel's €674,600 to €524,702: the delivered-water standby was dropped (it is CIREST's and the operator's duty), covers were cut to 5,000 households, and the food bank's East channel was replaced by the CCAS. Exposure: Climate Impact Lab, *451,000 at Risk*, Sep 2026, pre-peer-review, heat only. **The CIREST figure is our scaling of the Saint-Benoît arrondissement row, not an Impact Lab finding**, and heat is not what kills here.

EXECUTIVE SUMMARY — AT A GLANCE

21.05°S 55.70°E, France · IGN ADMIN EXPRESS, OpenStreetMap contributors; Natural Earth

- **The risk.** Cyclones here become water cuts: Garance (2025) cut power at Saint-Benoît's boreholes, and the island took 7 days to restore supply.
- **First action.** By 30 November, CIREST has CISE Réunion prove under load that the Chemin Sévère and Harmony borehole generators work.
- **The money.** €240k / €525k / €851k (floor / target / ceiling). Lists, caller kits, and transport to find the isolated come first (€70k).
- **Do not.** Never stand down water distribution when the red alert lifts: after Garance, 44% of the island was still without water.

* Suggested formulation: check with a health worker before sharing.

East (CIREST) is the five coastal and upland communes of the Communauté intercommunale Réunion Est without Salazie, which is in the separate cirques briefing: Saint-André, Bras-Panon, Saint-Benoît, La Plaine-des-Palmistes, and Sainte-Rose. Together they hold **123,994 people** (INSEE, populations légales 2023, in force 2026) and **46,822 households** (INSEE 2023; our sum of the five communes). This is the wettest coast of the island, the one most exposed to cyclones arriving from the east, and the sector with the highest leptospirosis rate. CIREST holds the drinking-water competence. Since 5 May 2025, CISE Réunion (Saur group) has run Saint-André, Sainte-Rose, and Plaine-des-Palmistes under a 12-year concession, worth €248.1 million and won with a single bid. Saint-Benoît (CISE, on a lease since 2017) and Bras-Panon (Runéo, since 2018) join that concession on 1 January 2027. This briefing is the third of six for Réunion. It is written to be adopted as an annex to CIREST's intercommunal safeguard plan (PICS), *volet pénurie d'eau, chaleur et épidémies*. Each action carries its cyclone phase (avant, pendant, or sauvegarde).

COMMUNE	PEOPLE	HOUSEHOLDS · POVERTY	WATER OPERATOR	VIGIEAU, DRINKING WATER (14 OCT 2026)	NETWORK EFFICIENCY (2021)	OFFICIAL FLOOD MAP (TRI)
Saint-André	58,885	21,567 · 43.6%	CISE Réunion (concession)	Alerte renforcée (groundwater)	61% (target 75%)	Yes: coastal only; river overflow mapped in Sainte-Suzanne
Saint-Benoît	38,604	14,797 · 45.9%	CISE Réunion (lease to 31 Dec 2026)	Alerte	55% (target 71%)	Yes: river and coastal
Bras-Panon	13,012	5,237 · 35.0%	Runéo (to 31 Dec 2026)	Alerte	83% (target 73%, met)	Not mapped
La Plaine-des-Palmistes	6,936	2,626 · 40.0%	CISE Réunion (concession)	Alerte	58% (target 69%)	Not mapped
Sainte-Rose	6,557	2,595 · 48.0%	CISE Réunion (concession); three separate networks	Vigilance	23% (target 79%), the island's worst	Not mapped

* Suggested formulation: check with a health worker before sharing.

VigiEau shows the restriction level, not the state of supply (prefectoral order of 9 October 2026, in force 10 October). On 21 July 2026, Saint-André, Bras-Panon, and Saint-Benoît were put on *alerte renforcée*, with the Bras des Lianes and the Rivière des Marsouins at historic lows; only Saint-André remains there today. Efficiency: Office de l'eau, *Chroniques de l'eau* n°133 (2023), 2021 data; a secondary site quoting SISPEA 2023 gives Sainte-Rose 19.2%. Households and poverty: INSEE RP2023 and Filosofi 2023 (60% of the median; INSEE warns the 2023 rates are not comparable with earlier years). "Not mapped" on the TRI flood maps (DEAL, 2nd cycle) means not mapped, not risk-free: every commune has a natural-risk prevention plan (PPR). Six priority neighbourhoods (QPV, décret 2024-1212): in Saint-André, Cressonnière–Manguiers–Mille Roches, Centre Ville, Petit Bazar–Chemin du Centre–Fayard, and Cambuston Centre; in Saint-Benoît, Rive Droite and Sainte-Anne. El Niño on Réunion: rain on average in surplus, a clearly hotter season, and no change in the island's cyclone exposure (Météo-France). The deficit predates it: 2025–26 was the driest rainy season in 54 years of records (−45%, provisional; −60 to −70% in the hauts), the second deficit season in a row after −30% in 2024–25 (Météo-France, provisional season review, 29 April 2026).

WHAT THIS PLACE SHOULD DO

RANKED

Ranked by expected lives saved per unit of effort before the peak. Backing lenses are shown per action; an action several lenses reached independently is the stronger bet.

1. By 30 November, have CISE Réunion prove under load that the backup generators at the Chemin Sévère and Harmony boreholes work, and sign standby generator and fuel contracts for the other main boreholes and pumping stations

PARTIALLY CONFIRMED | PHASE: AVANT | EMERGENCY MANAGER · HISTORIAN · ECONOMIST | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
CIREST (the authority), with CISE Réunion and Runéo, and EDF Réunion	Load tests and written proof by 30 November 2026; fuel delivered at each pré-alerte	Generators partly funded; the Office de l'eau share was requested in March 2025. Standby contracts about €20,000–40,000 (unquoted estimate, CIREST budget)	A cyclone power cut turning into a week without water for Saint-Benoît and the GHER hospital

In the East, cyclones cut the water by cutting the power. After Belal (January 2024), CIREST recorded that the lack of backup power at its main water sites had been "mise en évidence". On 24 July 2024 it amended Saint-Benoît's lease with CISE Réunion (avenant n°5) to add generators at two boreholes: Chemin Sévère, which serves more than 10,000 people and the GHER hospital (€320,505 before tax), and

* Suggested formulation: check with a health worker before sharing.

Harmony, which serves more than 10,000 (€310,478). Under a convention of 12 August 2024, the State's post-Belal investment fund (FEI) put €785,500 toward nine generators across Saint-Benoît, Saint-André, and Plaine-des-Palmistes, 34% of their €2.31 million cost. The two Saint-Benoît generators are partly funded; the Office de l'eau share was requested in March 2025 (€290,000, 46%; decision 2025_D_006, 20 March 2025). Seven months after the vote, Garance (28 February 2025) hit. The ARS water log records "perte alimentation électrique (impact St Benoît notamment)", and the GHER was supplied by tanker. When the red alert lifted, 44% of the island had no water, 5% after 48 hours, and supply was fully restored only on 8 March, seven days later. About half of the failures were electrical. The generators join the delegation "dès leur mise en service", so proving they work is the operator's job, and CIREST's to demand.

Corrections: no record shows the generators installed or commissioned, which is why the action asks for written proof and a load test rather than assuming them. The Chemin Sévère cut of 24 October 2025 (4,936 subscribers, in Sainte-Anne and Petit Saint-Pierre) was a pump fault, not a power loss, so it shows that the borehole is a single point of failure, not that the power fails. "Mostly power" after Garance is corrected to about half. The standby contract cost is unquoted.

2. By 15 December, list every East patient on haemodialysis or self-dialysis, or dependent on home power; at the pré-alerte, bring each one's session forward, with transport from Sainte-Rose and the Plaine

PARTIALLY CONFIRMED | PHASE: AVANT | PUBLIC HEALTH · SKEPTIC · EMERGENCY MANAGER | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
ARS La Réunion, with the GHER, AURAR Saint-Benoît, the ASDR self-dialysis unit in Saint-André, and the five CCAS	**List by 15 December 2026; sessions moved at each pré-alerte**	**Staff time; sessions and transport are reimbursed**	**Deaths from missed dialysis or failed home equipment during a cyclone and the power cut after it**

Réunion's need for dialysis is five times the national rate, and end-stage kidney failure is three to four times as prevalent (Senate report r25-554); 13.6% of adults have diagnosed diabetes. In 2021 the East's in-centre haemodialysis ran 11,807 sessions at the GHER and 6,538 at AURAR Saint-Benoît, on 28 stations, plus 3,631 sessions at the ASDR self-dialysis unit in Saint-André (ARS). Every one of those patients depends on roads, power, and treated water at once. The list is made with the units, the GPs, and the CCAS. At the pré-alerte, before roads close, each patient gets a session brought forward, with transport from Sainte-Rose and Plaine-des-Palmistes, which are

* Suggested formulation: check with a health worker before sharing.

furthest from the units. The ARS also checks that every eligible patient on a home ventilator or electric infusion feeding is on EDF's PHRV list (*patients à haut risque vital*). The evidence: after Hurricane Sandy, dialysis patients dialysed early had lower odds of an emergency visit (adjusted OR 0.80, 0.67–0.96) and of death within 30 days (adjusted OR 0.72, 0.52–0.997) (Lurie et al., *AJKD* 2015, 13,836 patients).

Corrections: the PHRV convention between EDF and the ARS (renewed 2018) covers only home ventilation and electric infusion feeding. It gives a 24-hour line and warnings, not priority reconnection, and it does not cover dialysis patients, so "priority reconnection" is struck. AURAR Saint-Benoît, a second provider, was missing from the draft. The ASDR in Saint-André is a self-dialysis unit, not an in-centre one. The Sandy study is observational: its unadjusted mortality result was not significant, and the adjusted one only just was. The early-refill rule found for the cirques applies here too: a pharmacist may extend a chronic prescription only after it expires (CSP L5125-23-1).

3. Leptospirosis is the East's main killer: after every heavy rain, tell everyone who gardened, kept animals, or cleared up: "fever after mud or floodwater, see a doctor the same day and say leptospirose"; give boots and gloves to cane, vanilla, and market-garden workers; and, alongside, have the ARS run mobile sessions of the free vaccine for the most exposed from November

PARTIALLY CONFIRMED | PHASE: SAUVEGARDE | PUBLIC HEALTH · SKEPTIC · FRONTLINE · HISTORIAN · EMERGENCY MANAGER | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
ARS La Réunion and the CGSS, with the GHER, GPs, the Pro Vanille cooperative, and cane and farm organisations	Message after each heavy-rain episode; boots and gloves before the rains; mobile vaccine sessions from 1 November 2026	Within the CGSS-funded campaign and ARS budgets; no donor line	Leptospirosis deaths after rain returns to a record-dry island

Between 1 January and 15 April 2026, the East had 45 of the island's 142 leptospirosis cases, 34 per 100,000, the highest rate on the island: Saint-Benoît 20, Saint-André 12, Sainte-Rose 6 (Santé publique France). The GHER in Saint-Benoît handled 53% of the island's leptospirosis emergency visits. The South's rate is 18 per 100,000 (39% of cases), and Le Tampon and Saint-Benoît had the most cases (20 each). Island-wide, cases were 89% men, median age 52, and 61% of those with data were hospitalised, 28% of them in critical care (Santé publique France, 17 April 2026). By 9 October there had been 250 cases and 3 deaths island-wide in 2026. The main defence this season is prevention and early care: boots and gloves, no wading, and, after every cyclone or heavy-rain episode, a Creole and French message from the ARS to everyone exposed, not only farmers, with a reminder to GPs to treat on suspicion. Vaccination sits alongside

* Suggested formulation: check with a health worker before sharing.

that, for the most exposed. It has been free for all adults since 29 September 2025 (ARS and CGSS): two injections 15 days apart, a booster at 4–6 months, then every 2 years if exposure continues. Protection builds over the first month after two doses; it is not this season's main defence (the island rule, RE-X08). It is given at CHU Nord, CHU Sud, and occupational health services, not in the East, so the ARS would need to run mobile sessions: at the GHER, at the Pro Vanille cooperative in Bras-Panon (174 members), and at cane delivery points. The GHER plans dialysis and critical-care capacity for January to April.*

Corrections: the "69% farming exposure" includes leisure gardening; only 35% of cases with a recorded occupation worked in agriculture, gardening, or market gardening. The April bulletin's text gives the South a figure of 39 that is its share of cases, not a rate; its table gives the South 18 per 100,000, about half the East's. The vaccine covers one serogroup and has immunogenicity data only, with no proof that it prevents cases. A Réunion study of 117 hospitalised patients (2014–15) found the median four-day delay to treatment was not linked to severity, so the same-day message is sensible but not proven to cut deaths. The ARS already ran radio and social-media campaigns from March 2026, so a donor-funded campaign would duplicate it.

4. By 15 December, stock Sainte-Rose for a week on its own: water-storage kits and food kits for its poor households, and three days of drinking water for everyone

PARTIALLY CONFIRMED | PHASE: AVANT | EMERGENCY MANAGER · SKEPTIC · FOOD SUPPLY · PHILANTHROPIST | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The commune of Sainte-Rose, through its CCAS	Stock in place by 15 December 2026	€167,702 (F02)	The poorest commune in the East, with the island's leakiest network, running out of safe water when its roads close

Sainte-Rose has 6,557 people in 2,595 households, and 48.0% of its people are below the poverty line. Its network loses most of its water (23% efficiency in 2021, against a target of 79%), and it is fed by three separate networks: the town, Bois Blanc, and Balmann. So outage notices should be posted by network, not by commune. In January 2025, 48% of Sainte-Rose was on drought cuts (ARS). On 13 March 2026, lava crossed the RN2 in the Grand Brûlé for the first time since 2007. The road south stayed closed until late May, and the trip to Saint-Philippe went from 30 minutes to 2.5 hours. To the north, a single RN2 bridge crosses the Rivière de l'Est. There is no épicerie

* Suggested formulation: check with a health worker before sharing.

sociale in the commune. The arithmetic, for its 1,245 poor households (2,595 × 48%, an approximation): water kits 1,245 × €85 = €105,825; food kits 1,245 × €26 = €32,370; and three days of drinking water for everyone, 6,557 × 3 L × 3 days × €0.50 = €29,507. Total €167,702.

Corrections: the draft said Sainte-Rose could be cut off "on both sides". The southern cut is documented, but no source shows the Rivière de l'Est bridge cut in any cyclone (vehicles have used the newer bridge since 1979), and no source shows Sainte-Rose isolated after Bejisa, Fakir, Belal, or Garance. So the northern cut is a planning assumption, not a record. The drinking-water stock is held only for isolation. Delivered water during an ordinary outage is CIREST's and the operator's duty (action 5). No record shows the Sainte-Rose CCAS distributing at this scale, and it was recruiting its head in June 2026, so start the purchase now. Poverty is 48.0%, not the 49% in the set's scope research.

5. By 25 November, adopt CIREST's safeguard plan with a water-outage annex: one distribution point per distribution unit, bottled water bought before the season, tankers labelled non-potable, and distribution kept running until every unit is back

PARTIALLY CONFIRMED | PHASE: SAUVEGARDE | EMERGENCY MANAGER · ECONOMIST · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The president of CIREST and the five mayors (who co-adopt the plan), with CISE Réunion and Runéo	25 November 2026 (legal deadline 26 November)	About €204,000 per event, released at alerte rouge or a cut over 24 hours (CIREST budget; estimate)	Day-two improvisation, and households drinking tanker water

CIREST must have its PICS by 26 November 2026 (loi Matras), and no public record shows that it has one: no deliberation, tender, or press report was found for 2024–26. The annex names a distribution point for every distribution unit (UDI), with a bottled-water stock and tankers labelled "non potable" in French and Creole. It also sets the rule that distribution runs until the last unit is restored, not until the alert lifts (*Do not* 7). It names the request to the préfecture for the Sécurité civile's mobile water-production unit. In January 2025 that unit started at Saint-André on a Friday, and distribution began on the Monday. Bottled water should be bought now through UGAP or a short formal procedure, because an open tender cannot be awarded in six weeks. The plan should also tell residents their existing rights: no water cut-off for unpaid bills at a main residence (CASF L115-3), and capped bills after a leak (CGCT L2224-12-4). The size of an event: on 30 January 2025, about 34,000 people in this zone were on cuts (Bras-Panon 61%, Sainte-Rose 48%, Saint-André 40%). So 34,000 × 3 L × 4 days × €0.50 = €204,000.

* Suggested formulation: check with a health worker before sharing.

Corrections: the ARS's "30% of CIREST" (39,350 people) includes Salazie and Sainte-Marie, so the in-zone figure is about 34,000, not 37,200. Those were drought cuts, mostly under 12 hours a day. The water unit is a State asset requested through the préfecture, not a contract CIREST can pre-agree, and the source does not say it was flown in. The draft's proposal to write an outage credit into the CISE concession is moved to *Do not* 10.

6. By 30 November, enrol isolated older and disabled people, and people with no car, in each mayor's register of vulnerable people, and give each a named caller who rings within 24 hours of a water cut or a red alert

PARTIALLY CONFIRMED | PHASE: AVANT | FRONTLINE · PHILANTHROPIST · SKEPTIC · PUBLIC HEALTH

ADAPTATION INVENTORY: HEAT WARNING SYSTEMS (ITALY, US, CANADA), NOT IN A SETTING LIKE THIS

OWNER	BY WHEN	COST	PREVENTS
The five mayors, through their CCAS, with the Secours catholique teams, temple and parish networks, and neighbourhood associations	30 November 2026	€70,000 (target): lists, caller kits, and transport for four commune shares (F01)	People who are ill, alone, and without a car going unnoticed through a water cut or a power cut

Each mayor keeps a voluntary register of vulnerable people (CASF L121-6-1), by law and with the commune's own staff. The grant pays for what lets the CCAS teams and volunteers fill it and use it: lists, caller kits, and transport, for door-knocking the six priority neighbourhoods and the hauts (Plaine-des-Palmistes, Piton Sainte-Rose, Bois Blanc), where people are furthest from help. Trust here runs through worship and charity, not the mairie. Secours catholique runs a Saturday street café at the Saint-Benoît presbytery and has teams in Saint-André, Sainte-Rose, and Bras-Panon, which went door to door after Garance. The Temple du Colosse in Saint-André holds the island's biggest Dipavali. Each volunteer caller takes 5–10 neighbours with no car and rings them within 24 hours of a cut or a red alert. Anyone not reached goes to the Croix-Rouge's East office in Saint-Benoît. The four shares are for Saint-André, Saint-Benoît, Sainte-Rose, and one shared by Bras-Panon and Plaine-des-Palmistes, at about €17,500 each for 5 months (an unquoted estimate): printing and updating the lists, a kit for each volunteer caller (phone credit, a torch, and a battery radio), and taxi or minibus hire to bring people with no car to water, dialysis, or a shelter. The register is for alerts and calls only. Décret 2026-590 forbids using it for cash, so the island's trigger-cash line (RE-F01) pays from the CCAS's own aid lists, kept separate from the register.

* Suggested formulation: check with a health worker before sharing.

Corrections: six QPVs, not seven: Petit Bazar–Chemin du Centre–Fayard is one neighbourhood. Keeping the register is already the mayor's legal duty, and contrat-de-ville mediators (*adultes-relais*) may already knock doors in the QPVs, so the grant no longer pays for staff: it pays for lists, kits, and transport, not for the register itself. The register is never tied to cash (Décret 2026-590). No cost-per-life figure exists. The only evaluated precedent is Philadelphia's heat warning system, a temperate US city, so transferability is weak.

7. By 15 December, stock water-storage kits and no-cook food kits for the écarts of Saint-André, Saint-Benoît, Bras-Panon, and the Plaine, released at pré-alerte or alerte orange, before a forecast or announced cut, to households who cannot cook first

PARTIALLY CONFIRMED | PHASE: PENDANT | PHILANTHROPIST · FOOD SUPPLY · EMERGENCY MANAGER · ECONOMIST

ADAPTATION INVENTORY: ANTICIPATORY CASH (BANGLADESH, NEPAL) FOR THE CASH PART ONLY

OWNER	BY WHEN	COST	PREVENTS
The four CCAS, with the Croix-Rouge / PIROI for the water kits	15 December 2026; released on the trigger	€222,000: 2,000 water kits (€170,000) + 2,000 food kits (€52,000) (F03)	Households in the outlying hamlets with no safe water, and food they cannot cook

Saint-Benoît was the commune worst hit by Garance. The mairie handed out 64 pallets of bottled water a day, and the State sent 19 non-potable water tanks. A water kit holds jerricans, purification tablets (Aquatabs), and a container cover, at €85. A food kit feeds a household for three days without cooking (€26). The Croix-Rouge platform PIROI keeps a humanitarian warehouse in Sainte-Marie, and after Chido it shipped more than 20 tonnes of jerricans, buckets, and hygiene kits from Réunion. The Croix-Rouge has an East local unit on rue Bouvet in Saint-Benoît. The CCAS buy the food kits directly, and Saint-Benoît's CCAS runs an épicerie sociale. Before 30 November, the CCAS list the households in the écarts who cannot cook without power or water; they get the kits first. The island trigger cash (€475 a household, RE-F01) is paid separately, from the CCAS's own aid lists. Release the kits at pré-alerte or alerte orange, before a forecast or announced cut: not at alerte rouge, which is lockdown, and not on a cut of more than 72 hours, when the State's bottled water starts and kits would duplicate it.

* Suggested formulation: check with a health worker before sharing.

Corrections: the Banque alimentaire des Mascareignes was dropped as the channel: it has no East site (its head office is in La Saline, and the closure of its East hub was reported in 2008). The "7,220 Saint-Benoît residents without water after Garance" could not be found in any source, so the 2,000 households is a placeholder until the lists give a count. No East CCAS has a documented distribution to thousands of households. The kit prices have no Réunion quote.

8. From November, fit covers to stored water in breeding-site rounds in the six priority neighbourhoods, with "couvrez vos réserves" on every CIREST water-cut notice

PARTIALLY CONFIRMED | PHASE: AVANT | PHILANTHROPIST · PUBLIC HEALTH · FRONTLINE · HISTORIAN | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The Saint-André and Saint-Benoît communes, with neighbourhood associations; the ARS is consulted (its own work is already State-funded)	**Rounds 2 November – 15 December 2026**	**€65,000: covers for 5,000 households at €13 delivered (F04)**	**Dengue and chikungunya bred in water stored during cuts**

Every rationing notice makes households fill drums and buckets just as the hot, wet season starts, and Saint-André is on *alerte renforcée* now. On visits to the six QPVs, a team clears the breeding sites in each yard and fits one cover to stored water. The visit ends with one line on leptospirosis. Covers are paid in tranches, as delivery is verified. The island rule RE-01 puts "couvrez vos réserves" on every notice. Evidence: in Girardot, Colombia, treated covers on large water containers cut pupae per person by 71% in intervention clusters, against 25% in controls (cluster trial, PMC4299530). Community-led clearance cut dengue infection in the Camino Verde trial (*BMJ* 2015).

* Suggested formulation: check with a health worker before sharing.

Corrections, and why this ranks eighth: the Colombian covers were insecticide-treated nets on concrete tanks of 200 litres or more, in only 8 clusters at follow-up, with no dengue outcome. A €13 untreated drum cover is only partly supported by that trial. Santé publique France flagged no dengue cluster in the East in 2026 (the clusters were on the West and South coasts), so the panel's 20,000 households was cut to 5,000. No ARS programme distributes covers, so this does not duplicate one.

9. Before January, have the Région publish East-coast rules for a business-loss scheme, so outlying shops keep stocking, and list the shops with no backup cold storage

PARTIALLY CONFIRMED | PHASE: SAUVEGARDE | FOOD SUPPLY | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
Région Réunion, with the CCI and the CCAS	Rules published by 15 December 2026	Staff time now; about €100,000 for cold boxes and restocking (estimate; unfunded)	Empty shelves in the écarts after the RN2 reopens, while cash is in people's pockets

The food lens's finding: the East grows bananas, lychees, and vanilla, and still depends on the last 30 km of RN2 for what people eat. Garance did €151.6 million of farm damage island-wide. A shop in an écart restocks when it can pay and keep things cold, not when the road reopens. The Région has paid losses before, after proof: €900,000 to 61 firms in Cilaos and Grand Bassin after Berguitta (2018), and aid to Cilaos firms that lost at least 20% of monthly turnover after Belal (2024). The CCI reports that 34% of the island's firms are uninsured. Publishing East rules before the season, and placing cold boxes or small generators with the shops that have none, lets shopkeepers stock up knowing the loss is covered.

Corrections: EDF restores the network in technical order (high voltage, hospitals, water pumping, then dense areas), so a list of shops will not change the order of reconnection. Hence backup cold storage, not a priority list. No restocking-credit precedent exists in Réunion; every past scheme paid after proven loss. Schools close at alerte orange, but the austral-summer holiday runs from about 18 December to 1 February, so lost school meals matter only in February and March. The INSEE price index lags about four weeks, so it can size cash top-ups for March to May, not trigger kits. Lives saved are indirect and small, which is why this ranks last.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal. "Water operators" are CISE Réunion and Runéo; "Care providers" are the GHER, AURAR, the ASDR, and GPs; "Associations" include the Secours catholique, temple and parish networks, and Pro Vanille.

Action	ARS	CIREST	Water operators	Communes	CCAS	Croix-Rouge	Associations	Care providers	Préfecture	EDF	Région
1. Borehole generators proven	I	A	R	I					C	C	
2. Dialysis and power-dependent list	A			C	R			R		I	
3. Leptospirosis: vaccine, message, GHER	A/R			I			R	R			
4. Stock Sainte-Rose		C	C	R	A/R	C			I		
5. PICS water-outage annex	C	A/R	R	R	I	C			C	C	
6. Register and phone tree	C			A	R	C	R				
7. Écart water and food kits		C		I	A/R	R	R		I		
8. Covers in the six QPVs	C	C	I	A/R	C		R				
9. Shop loss rules and cold storage				C	R		C		I	C	A/R

What the chart shows: CIREST is accountable for the two rows that decide whether the water comes back (1 and 5), and neither needs donor money; both need a decision and the operator's signature. The CCAS are accountable for the two rows that carry most of the donor money (4 and 7), the mayors for the register (6), and the communes for the cover rounds (8), with the ARS consulted. The ARS is accountable for the two health rows (2 and 3). No row depends on the State paying first.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR

€240,377 (about $269,100)

TARGET

€524,702 (about $587,400)

CEILING

€851,302 (about $953,000)

LARGEST UNCERTAINTY

Delivery capacity: no East CCAS has a documented distribution to thousands of households

At the ECB reference rate of 14 October 2026, €1 = US$1.1195, fixed for all six Réunion briefings. **Floor** = lists, kits, and transport for two commune shares (€35,000) + Sainte-Rose food kits and drinking water (€32,370 + €29,507 = €61,877) + 1,000 water kits and 1,000 food kits for the écarts (€85,000 + €26,000 = €111,000) + covers for 2,500 households (€32,500) = €240,377. **Target** = four commune shares (€70,000) + Sainte-Rose in full (€167,702) + 2,000 water kits and 2,000 food kits (€222,000) + covers for 5,000 households (€65,000) =

* Suggested formulation: check with a health worker before sharing.

€524,702. **Ceiling** = five commune shares, one per commune (€87,500) + Sainte-Rose with food kits for all 2,595 households (€67,470 + €105,825 + €29,507 = €202,802) + 4,000 water kits and 3,500 food kits (€340,000 + €91,000 = €431,000) + covers for 10,000 households (€130,000) = €851,302. Above that, the CCAS's hands bind before the peak, not money. Set unit costs, as fixed by the CINOR briefing: cover €13 delivered, water-storage kit €85, food kit €26, drinking water €0.50 a litre. Not counted here: the island trigger cash RE-F01 (€475 a household, in `reunion-island-funding.json`), the leptospirosis campaign (CGSS and ARS), CIREST's own outage water (action 5, about €204,000 per event), and the Région's loss scheme (action 9). The target fell 22% from the panel's €674,600. The €54,600 delivered-water standby was dropped as CIREST's and the operator's duty. Covers were cut from 20,000 to 5,000 households, because the East had no dengue cluster in 2026 and the trial evidence is for treated nets on large tanks. Sainte-Rose was added as its own line.

RECIPIENT	USE	AMOUNT (TARGET)	MECHANISM	BASIS	VERDICT
The CCAS of Saint-André, Saint-Benoît, Sainte-Rose, and Bras-Panon (shared with Plaine-des-Palmistes)	Action 6: lists, caller kits, and transport	€70,000 ($78,365)	Direct grant; readiness	4 commune shares × about €17,500 for 5 months (unquoted estimate). Not staff, and never tied to cash. No cost-per-life figure; Philadelphia's heat warnings (117 lives over 1995–98 for about $210,000) are the nearest, with weak transfer	PARTIALLY CONFIRMED
CCAS of Sainte-Rose	Action 4: a week's stock for the poorest commune in the East	€167,702 ($187,742)	Pre-positioned stock; readiness	1,245 poor households × (€85 water kit + €26 food kit) + 6,557 people × 9 L × €0.50. No cost-per-life figure. Capacity unproven	PARTIALLY CONFIRMED
The four other CCAS, with the Croix-Rouge / PIROI (water kits)	Action 7: écart water and food kits	€222,000 ($248,529)	Pre-positioned stock; released on the trigger	2,000 × €85 + 2,000 × €26 (placeholder count until the lists are made); no cost-per-life figure	PARTIALLY CONFIRMED
Neighbourhood associations in the six QPVs, under the ARS partner guide	Action 8: covers for 5,000 households	€65,000 ($72,768)	Pre-positioned stock; paid on verified delivery	5,000 × €13. Girardot, Colombia: treated covers cut pupae per person 71% vs 25% in controls (PMC4299530; entomological only)	PARTIALLY CONFIRMED

* Suggested formulation: check with a health worker before sharing.

The funder's one thing: the binding constraint in the East is reach, not euros. Fund the lists, kits, and transport that let the teams already there find the isolated first. Pay for covers only as they are delivered. Do not pay for what the operator already owes: the €631,000 of Saint-Benoît borehole generators is partly funded; the Office de l'eau share was requested in March 2025 (the FEI share came by convention on 12 August 2024), and the cheapest life saved this season is a load test that proves they start.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives here. Cards 1–5 apply to every Réunion zone and are written once for the island (RE-X01 to RE-X05); cards 6–10 are specific to the East.

1. Do not call this season an "El Niño drought"

CONTRAINDICATED ISLAND-WIDE (RE-X01)

El Niño on Réunion: rain on average in surplus, a clearly hotter season, and no change in the island's cyclone exposure (Météo-France). The shortage is a carried-over deficit and leaking networks. On the wettest coast, a drought message is the wrong warning: when the rain comes, it brings floods on the Rivière des Marsouins and the Rivière du Mât, and leptospirosis.

Instead: use the premise: a record carried-over deficit and leaking networks, in a hot El Niño year in which rain, when it comes, brings its own dangers.

2. Do not make insecticide fogging the visible response to dengue or chikungunya

CONTRAINDICATED ISLAND-WIDE (RE-X02)

Deltamethrin has been used on Réunion since 2006, and resistance in *Ae. albopictus* was detected in 2017. The ARS already limits spraying to the area around cases "to avoid creating resistance". Fogging looks like action and leaves the breeding sites in place.

* Suggested formulation: check with a health worker before sharing.

Instead: keep spraying to the ARS's case-centred use, and put the visible effort into yard clearance and covers (action 8).

3. Do not tell households to "store water" without saying "covered, emptied and scrubbed weekly"

`CONTRAINDICATED` `ISLAND-WIDE (RE-X03)`

Each rationing notice makes households fill tanks, buckets, and drums: the containers mosquitoes breed in, just as the hot, wet season starts. Saint-André is on *alerte renforcée* now, and in January 2025 a third of this zone was on cuts.

Instead: "Couvrez vos réserves (couvercle ou moustiquaire), videz-les et frottez-les chaque semaine", on every water-cut notice (RE-01).

4. Do not push chikungunya vaccination with Ixchiq for people aged 65 and over, or put chikungunya vaccine stock ahead of dengue and leptospirosis

`CONTRAINDICATED` `ISLAND-WIDE (RE-X04)`

The HAS advised suspending Ixchiq for people aged 65 and over on 25 April 2025, after serious adverse events in older people, most of them on Réunion; that advice stands, and the EU restricted it further in 2026. The HAS estimates 66% of Réunion now carries chikungunya antibodies and judges a new epidemic "peu probable".

Instead: follow the HAS (24 April 2026): Vimkunya for people aged 65 and over and for 12–64-year-olds with comorbidities, only if an epidemic resumes. In the East, put the effort into leptospirosis prevention and early care, with its vaccine for the most exposed (action 3).

5. Do not let tanker water be taken as drinking water

`CONTRAINDICATED` `ISLAND-WIDE (RE-X05)`

In the January 2025 drought, the ARS recorded distribution units on tankers marked "non alimentaire", serving 36,240 people, in a month when 40–61% of Saint-André, Sainte-Rose, and Bras-Panon were on cuts. After Garance, the State sent 19 non-potable water tanks to Saint-Benoît.

* Suggested formulation: check with a health worker before sharing.

Instead: label every tanker "non potable" in French and Creole, and hand out drinking water at the same point (action 5).*

6. Do not assume the RN2 south of Sainte-Rose is open

CONTRAINDICATED THE EAST

On 13 March 2026, lava crossed the RN2 in the Grand Brûlé for the first time since 2007. The road stayed closed until late May, and the 30-minute trip to Saint-Philippe took 2.5 hours. Crowds came to watch. To the north, a single bridge over the Rivière de l'Est carries the only other way out. A plan that resupplies Sainte-Rose from the south, or evacuates it that way, can fail for weeks without any cyclone.

Instead: stock Sainte-Rose before the season (action 4), and plan its supply from the north only.

7. Do not stand down water distribution when the red alert lifts

CONTRAINDICATED THE EAST

After Garance, 44% of the island had no water when the red alert lifted on 1 March 2025. That was 5% two days later, and full supply returned only on 8 March. On 3 March, Saint-André still had shortfalls, and most of Saint-Benoît had no power and water cuts. The mairie of Saint-Benoît was handing out 64 pallets of bottled water a day. The water crisis runs from day 2 to day 8 after the storm, when the alert is over and the crews have gone home.

Instead: keep every distribution point open until its distribution unit is restored, and write that rule into the PICS (action 5).

8. Do not aim leptospirosis warnings only at professional farmers, or offer doxycycline as routine prevention

CONTRAINDICATED THE EAST

In the first half of 2025, only one leptospirosis case in three reported an at-risk occupation, and a third of cases ended in critical care (Santé publique France). In 2026, 35% of cases with a recorded occupation worked in agriculture and 30% reported freshwater leisure. Gardeners, people who keep animals, and anyone clearing up after a cyclone are as exposed as cane workers. The Cochrane review found doxycycline prevention of unclear benefit, with much more vomiting (OR 11), and the ARS does not advise it.

* Suggested formulation: check with a health worker before sharing.

Instead: one message to everyone exposed after rain: "fever after mud or floodwater, see a doctor the same day and say leptospirose" (action 3).*

9. Do not run a generator indoors, or hand out generators without carbon-monoxide guidance

CONTRAINDICATED THE EAST

The ARS lists generators in rooms next to the home among the main causes of carbon-monoxide poisoning in Réunion. After cyclone Batsirai (February 2022), the préfet reported 10 people poisoned by carbon monoxide. After Belal, a fourth death from a generator appears in some counts but not in the prefecture's. A power cut that lasts a week, as Garance's did, puts generators in kitchens and garages. Elsewhere this has been deadly: after Hurricane Irma, Broward County recorded four generator deaths.

Instead: "outdoors only, well away from doors and windows", in every power-cut message, and a carbon-monoxide alarm with any generator a scheme pays for.*

10. Do not count on a contract amendment or the court's water award to deliver water in a cut this season

CONTRAINDICATED THE EAST · FINANCIAL

The panel proposed writing the UFC-Que Choisir award (€0.54 per consumer per day, and 1.5 litres a person a day) into the CISE concession as an automatic outage credit. But that award is for water unfit to drink in 2016–2023, in Sainte-Marie, Saint-André, Salazie, Saint-Benoît, and Les Avirons, not for cuts. It is under appeal, and money is due only once appeals end. An amendment needs the consent of the sole bidder, who is litigating the same remedy, so it will not be signed before January. The State says compensating users after long cuts is the intercommunality's job.

Instead: CIREST requires emergency drinking water under the contract's existing service and penalty clauses, and budgets its own (action 5).

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
1962 (28 Feb)	Cyclone Jenny, island-wide (neutral, ONI −0.2)	36 dead island-wide, including 9 fishermen at sea; no East breakdown found	—
1977 (24 Mar – 16 Apr)	Lava flow through Piton Sainte-Rose; the Notre-Dame-des-Laves church spared (neutral, +0.3)	No deaths; about 30 houses destroyed (some sources say a dozen)	—
1989 (29 Jan)	Cyclone Firinga (La Niña, −1.6)	4 dead island-wide	—
2002 (Jan)	Cyclone Dina (neutral, −0.1)	Island-wide: no direct deaths, 2 seriously injured, 5 to 6 indirect deaths; about a month later, 2 young people died on a debris dam it left in the Rivière des Pluies, outside this zone (IGE, 2003)	—
2014 (2–3 Jan)	Cyclone Bejisa; roofs torn off in Saint-André (neutral, −0.2)	1 dead and 17 injured island-wide	—
2018 (22–24 Apr)	Fakir; at least 40 boats damaged or destroyed at Sainte-Rose (neutral, −0.4)	2 dead, at Étang-Salé (outside this zone)	—
2024 (Jan)	Cyclone Belal, the first violet alert (El Niño, +1.8)	3 dead island-wide, none in this zone	CIREST voted borehole generators for Saint-Benoît (July 2024); partly funded (FEI convention, 12 August 2024); the Office de l'eau share was requested in March 2025

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
2025 (Jan)	Drought cuts (neutral, −0.5)	No deaths; about 34,000 people in this zone on cuts (Bras-Panon 61%, Sainte-Rose 48%, Saint-André 40%)	A Sécurité civile water-production unit at Saint-André
2025 (28 Feb)	Cyclone Garance; power lost at Saint-Benoît's boreholes (neutral, −0.5)	5 dead island-wide, none in this zone; 44% of the island without water at the end of the red alert	Full supply on day 7. Generators partly funded; the Office de l'eau share was requested in March 2025; no record yet that they are installed
2025 (24 Oct)	Pump fault at the Chemin Sévère borehole, Saint-Benoît (La Niña, −0.6)	No deaths; 4,936 subscribers cut	—
2026 (13 Mar)	Lava crosses the RN2 in the Grand Brûlé (neutral, +0.1)	No deaths; road closed until late May	—
2026 (21 Jul)	Bras des Lianes and Rivière des Marsouins at historic lows (El Niño, +1.8)	No deaths; Saint-André, Bras-Panon, and Saint-Benoît on alerte renforcée	Eased for all but Saint-André by the order of 9 October

The recurrence nobody has noticed: the East's water fails the same way whatever the weather, through a single borehole, a single intake, or a single power line. It failed in an El Niño cyclone (Belal), a neutral one (Garance), a drought (January 2025), and on a dry October day with no weather at all (Chemin Sévère, 2025). The permanent fix for Saint-Benoît, a treatment plant and 3,000 m³ reservoir at l'Olympe, was planned for June 2019 to June 2021. Its contract was cancelled and its subsidies have lapsed, and it is now forecast for 2028 (CIREST, 2025-C210). No commune-level record of the 1982–83, 1997–98, or 2015–16 El Niño seasons was found in the East. ONI values are NOAA CPC, for each event's season.

* Suggested formulation: check with a health worker before sharing.

WHERE THE EXPERTS DISAGREE — UNRESOLVED

- **Covers for every poor household** (philanthropist: 20,000 households, €260,000) versus **money for leptospirosis and dialysis, which kill here** (skeptic, public health). The verifier found no dengue cluster in the East in 2026 and trial evidence only for treated nets on large tanks. So this briefing funds 5,000 covers in the six QPVs and puts leptospirosis and dialysis in ranks 2 and 3, where the money is already public.
- **Price the outage** (economist: an automatic credit in the concession) versus **it cannot be signed in time** (finance verifier). The credit is moved to the *Do not* cards for this season. Whether CIREST should negotiate it for 2027–28, with a tariff offset, is a decision for CIREST, not a donor.
- **Pre-register farmers for post-cyclone aid** (economist) versus **the scheme no longer exists** (verifier: the €2,000 FEADER aid was a one-off for Belal and Garance, closed June 2025). Dropped. The alternative, helping small growers keep their PAC and DAAF records current so FSOM claims move faster, has no owner yet.
- **Sainte-Rose cut off on both sides** (emergency manager, food supply) versus **only the south has ever been cut** (verifier). The briefing stocks Sainte-Rose for the documented southern cut and its water fragility, and labels the northern cut a planning assumption.

WHAT NOBODY COVERED — BLIND SPOT

No lens could say which distribution units in the East depend on a single borehole or intake with no interconnection. Without that list, actions 1, 5, and 7 are sized to the commune, not to the units that will actually go dry. The ARS and CIREST hold it; the set's data request no. 5 asks for it. Nor did any lens look at the schools and gymnasiums the communes use as cyclone shelters, or whether they have water and power when the commune does not. Saint-Benoît's DICRIM, the public risk document that would list them, is an image-only scan.

HOW TO READ THIS — METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale (Réunion is one region). They are not neighbourhood figures. The El Niño projection covers *heat only*; drought, flood, fire, smoke, and crop failure are additional to it and are carried here by the historical record rather than by a published number. The study's map gives the Saint-Benoît arrondissement 1 excess heat death (Réunion 5). That

* Suggested formulation: check with a health worker before sharing.

arrondissement is CIREST including Salazie, 131,262 people. Scaled by population, this zone's share is 1 × 123,994 / 131,262 = 0.94. That is our arithmetic, not an Impact Lab finding, and it says nothing about leptospirosis or water, which kill more people here than heat.

HOW THIS BRIEFING WAS PRODUCED

METHODOLOGY

- **Scope.** The location was taken as given: East Réunion, the CIREST zone without Salazie (Saint-André, Bras-Panon, Saint-Benoît, La Plaine-des-Palmistes, Sainte-Rose), the third zone of six in the Réunion set. Climate Impact Lab impact region, as the report records it: REU.Re7bdb3a99bec931b, the whole island (about 890,000 people; label unconfirmed). Commune data are used for hazard exposure and action design, not for death counts.
- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts (51-member ensemble) applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline, for June 2026 – February 2027. It covers heat only. The arrondissement row is the 6-month field (`6mo_hotonly_total_mean`) of the study's map (Flourish visualisation 30298258), as resolved for the CINOR briefing; the CIREST figure is a population scaling of that row, shown with its arithmetic. It is never added to the Impact Map's long-run projections or quoted from the map's GDP-denominated mortality. Water outages, leptospirosis, and floods are carried by the historical record.
- **Expert panel.** Eight simulated expert lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst) each researched this place independently and in parallel, from web sources, to a fixed brief. Each worked from a shared pack of facts already verified for the Réunion set, and each was told to re-check any fact it used. A ninth research agent gathered local data only (households, operators, QPVs, flood maps, health data), with no recommendations.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias (whether the evidence behind an agreed action came from a setting like this one) before it counted in an action's favour. Contradictions were kept, not resolved by dropping a side. Actions were ranked by expected lives saved per unit of effort before the peak, each was given a named payer and trigger or marked unfunded, and the funding placements were reconciled against the ranked list.
- **Verification.** Six verifier agents checked every recommendation on three tests: evidence (the primary source and its effect size), transferability (whether that evidence came from somewhere like here), and feasibility (whether it can be done here before the peak). The financial lines had their own verifier, which checked availability in French law, a named payer, a trigger, and whether each instrument already exists; it moved one action to the *Do not* cards. The food actions and the funding envelope had their own verifiers too. The envelope was checked for real recipients, published unit costs, and duplication, then re-summed. The *Do not* cards and every row of the record were checked at source, with the NOAA ONI for each season.

* Suggested formulation: check with a health worker before sharing.

- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.
- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Consulted, from the 96 entries embedded in the inventory page (the download link is a registration form), as for the earlier Réunion briefings. It holds no entry for France, Réunion, small islands, water-supply backup power, dialysis, or leptospirosis. The only near precedents are anticipatory cash for floods (Bangladesh, Nepal) and heat warning systems (Italy, US, Canada), shown where they apply.
- **Health wording.** Passages where a wording error could hurt someone (leptospirosis and when to see a doctor, drinking water, and generators and carbon monoxide) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented; where data is thin, the report says so and labels its estimates. One exchange rate (ECB, 14 October 2026) and one set of unit costs are used across the Réunion set. Every source is listed below with its verification status.
- **Revised 2026-10-15 after the set audit** (fixes applied: the mayor's register untied from trigger cash and RE-F01 removed from actions 6 and 7, per Décret 2026-590; F01 recast from coordinators to lists, kits, and transport, same tiers; the borehole generators restated as partly funded, with the FEI convention of 12 August 2024 and the Office de l'eau share requested in March 2025; cover rounds (action 8) made the communes' responsibility and linked to RE-01; the kit release moved to pré-alerte or alerte orange, before a forecast cut, with one kit description; dialysis at five times the national rate (Senate r25-554), with sessions brought forward at the pré-alerte; leptospirosis rates, vaccine timing, and emphasis set to the island values; the Météo-France El Niño line given in full, with the cyclone clause, and the deficit wording settled; Sainte-Rose described as the poorest commune in the East; the Jenny, Firinga, Dina, and Bejisa tolls set to the island values, and the island-wide events linked to the national record; the unsourced Fakir flood mark dropped; placement amounts stored at the ceiling; people reached counted in households; the impact-region size clause deleted).
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. Web search worked throughout this run; the session cap was not hit. The ARS Garance bilan, the DEAL events table, and several DAAF and news pages returned 403 or refused connection to direct fetches. The ARS bilan was then read by direct download, and the DAAF note (the cane harvest end date) could not be read. No public record shows the status of CIREST's PICS or the commune PCS. Network

* Suggested formulation: check with a health worker before sharing.

efficiency after 2021 was found only on a secondary site. No count of East households storing water uncovered exists. No East figure was found for dengue in 2026, and no commune record was found for the 1982–83, 1997–98, or 2015–16 El Niño seasons.
