EL NIÑO ACTION BRIEFING · 14 OCTOBER 2026

Southwest (CIVIS), Réunion

Not an El Niño drought: a record carried-over water deficit, leaking networks, heat, mosquito-borne disease bred in stored water, leptospirosis, and cyclones that become water outages, in a hot El Niño year. Here, the southwest is where the island's dengue and chikungunya epidemics start, and in January 2024 the rain killed two drivers on flooded radiers.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
All Réunion (one region); CIVIS shares the Saint-Pierre arrondissement row with CASUD and Cilaos	None published for CIVIS; about 1.1 by population share of the row's 2 (our arithmetic)	6-month, Sep 2026 – Feb 2027	Mosquito-borne disease bred in stored water; flooded ravine crossings

18/18 recommendations checked. 0 confirmed as written, 9 corrected, 0 unverified, 9 contraindicated (the Do not cards). The funding target fell 24%, from the panel's €527,500 to €399,000: the water kits' 72-hour trigger duplicated the State's bottled water, and cover delivery was resized to what crews can reach by January. Exposure: Climate Impact Lab, *451,000 at Risk*, Sep 2026, pre-peer-review, heat only. **The CIVIS figure is our scaling, not an Impact Lab finding.**

EXECUTIVE SUMMARY — AT A GLANCE

21.29°S 55.44°E, France · IGN ADMIN EXPRESS, OpenStreetMap contributors; Natural Earth

- **The risk.** The 2019 dengue epidemic (14 dead) began in these streets, and on 28–29 January 2024 two drivers drowned on flooded radiers.
- **First action.** From November, the communes run Creole door-to-door rounds with a cover for every water drum in the 2019 and 2025 foci.
- **The money.** €281k / €399k / €745k (floor / target / ceiling). Covers for stored water come first (€130k).
- **Do not.** Never drive across a flooded radier: the doctor who died in 2024 had been told to turn back.

* Suggested formulation: check with a health worker before sharing.

The Southwest is the coast and hauts of five communes run by the intercommunality CIVIS: **Saint-Pierre**, **Saint-Louis**, **L'Étang-Salé**, **Les Avirons**, and **Petite-Île**. That is 179,046 people in 71,847 households, about 25,800 of them poor (INSEE, populations légales 2023, in force 2026; households RP2023; poverty rates 2023 applied to households, an approximation). CIVIS also covers Cilaos, which has its own briefing (the cirques). CIVIS has run drinking water since 2020, and its intercommunal safeguard plan (PICS) is signed by its president and all six mayors. This briefing is the sixth of six for Réunion. It is written to be adopted as an annex to that plan, *volet pénurie d'eau, chaleur et épidémies*, and each action carries its cyclone phase (avant, pendant, or sauvegarde). The Rivière Saint-Étienne splits the zone: Saint-Louis, Étang-Salé, and Les Avirons on the west bank; Saint-Pierre, with CHU Sud and the Dassy treatment plant, on the east.

COMMUNE	PEOPLE	HOUSEHOLDS	POVERTY	VIGIEAU DRINKING WATER (14 OCT 2026)	NETWORK EFFICIENCY (2021)	OPERATOR
Saint-Pierre	85,038	35,319	35%	Alerte	61%	Runéo (Veolia)
Saint-Louis	54,941	20,486	42%	Vigilance	74%	Not confirmed (re-let 2023)
L'Étang-Salé	14,464	5,872	27%	Alerte	80%	Not confirmed (re-let 2025)
Les Avirons	11,536	4,753	28%	Alerte	75%	Not confirmed
Petite-Île	13,067	5,417	36%	Alerte	54%	SPL Sources et Eaux

VigiEau shows the restriction level, not the state of supply; order of 9 October 2026, in force 10 October; groundwater is at *vigilance* in all five communes. Efficiency: Office de l'eau, *Chroniques de l'eau* n°133 (2023), 2021 data, table 4 (island 63%). Saint-Pierre, the largest commune, loses about 4 litres in 10, 20 points short of its target. El Niño on Réunion: rain on average in surplus, a clearly hotter season, and no change in the island's cyclone exposure (Météo-France). The deficit is carried over from the driest rainy season in 54 years of records (−45%, provisional; −60 to −70% in the hauts), the second deficit season in a row after −30% in 2024–25 (Météo-France, provisional season review, 29 April 2026). Saint-Pierre is one of the six mapped flood-risk areas (TRI Saint-Pierre–Le Tampon: the Rivière d'Abord, Ravine Blanche, and Ravine des Cabris); the hauts of Saint-Louis, Petite-Île, and Les Avirons are not mapped, which does not mean they are risk-free.

* Suggested formulation: check with a health worker before sharing.

WHAT THIS PLACE SHOULD DO RANKED

Ranked by expected lives saved per unit of effort before the peak. Backing lenses are shown per action; an action several lenses reached independently is the stronger bet.

1. From November, run Creole door-to-door breeding-site rounds, with one cover for every water drum, in the 2019 dengue and 2025 chikungunya foci

PARTIALLY CONFIRMED | PHASE: AVANT | PUBLIC HEALTH · FRONTLINE · HISTORIAN · SKEPTIC · ECONOMIST · PHILANTHROPIST | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The five communes, with their vector-control crews and the ARS partner associations; the ARS is consulted	**From 2 November; 6,500 households by 15 December, 10,000 by January**	**€130,000 for 10,000 covers delivered (F03)**	**Dengue and chikungunya bred in water stored during rationing**

The southwest is where the island's epidemics start. In 2019, dengue infected 18,191 people and killed 14 (9 directly) (Préfecture and ARS, 7 January 2020). By 2 April that year, the largest foci were Saint-Louis and Rivière Saint-Louis (585 cases), Saint-Pierre (196), Étang-Salé (144), Ravine des Cabris (98), Les Avirons (70), and Petite-Île (67) (Santé publique France). In January 2025, the chikungunya epidemic's most active focus was Ravine Sheunon, in Étang-Salé. Four of the five communes are now on drinking-water *alerte*, so households are filling drums. The rounds start where those epidemics started: Rivière Saint-Louis, Le Gol, Bois de Nèfles, and La Chapelle in Saint-Louis; Ravine des Cabris, Bois d'Olive, Ravine Blanche, and Bois Noirs in Saint-Pierre; Ravine Sheunon in Étang-Salé. Pairs of visitors speak Creole, lift the lid with the household, fit a cover (€13 delivered, the island rule RE-01), empty the saucers, tyres, and gutters, and leave a picture card rather than text. Eight in ten Réunionnais spoke only Creole as children (INSEE). The evidence: in the Camino Verde cluster trial (85,182 people, Nicaragua and Mexico), community mobilisation cut dengue infection in children by 29.5% (95% CI 3.8–55.3) (Andersson et al., *BMJ* 2015).

Corrections: the State cut its share of the PEC job contracts that carry vector control to 40% for six months in 2026 (préfet's letter, May 2026), so the crews may be thinner in November than in 2025, when the ARS had 200 agents, 120 RSMA soldiers, and about 800 PEC staff. Delivery is sized to 6,500 households by mid-December, not the panel's 13,000. The cost-effectiveness basis (Taborda et al. 2022, Girardot) tested treated covers on large tanks against *Ae. aegypti*; Réunion's *Ae. albopictus* breeds mostly in small containers, so covers

* Suggested formulation: check with a health worker before sharing.

are only part of the round. The mosquito-control meta-analysis behind covers (Bowman et al. 2016, OR 0.22) rests on low-quality observational studies. The "Le Tampon 437 / Étang-Salé 241" figures for 2025 are dropped: the 11 February 2025 bulletin gives Étang-Salé 199, and Le Tampon is outside CIVIS. No 2026 cover distribution by the ARS was found; confirm with it before buying. The communes, not the ARS, are accountable for the rounds, because ARS work is already State-funded; the ARS is consulted.

2. By 30 November, each mayor lists the flood crossings (radiers) in the hauts of Saint-Louis, Petite-Île, and the Saint-Pierre ravines, and closes them with barriers and staff at orange cyclone or orange heavy-rain vigilance

PARTIALLY CONFIRMED | PHASE: AVANT | EMERGENCY MANAGER · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The five mayors (police powers), with the Département and the préfecture for radiers on their roads	List by 30 November 2026; closed at each orange vigilance	Commune budgets: barriers and municipal police time (not priced)	Drivers swept away on flooded radiers

These are the most recent weather deaths in CIVIS, and neither came under a cyclone alert. On Sunday 28 January 2024, about 21:30, a 28-year-old locum doctor working in Saint-Louis drove onto the radier of a ravine in the hauts of Saint-Louis while witnesses shouted at him not to cross. His passengers escaped; his body was found two days later. Early on 29 January, a father was swept away in his car on the radier of chemin Fortuné Grosset, in Petite-Île, over a ravine that flows only in very heavy rain. Both died in rain two weeks after Belal. The mayor can close a road under the general police power (CGCT L2212-2, and L2212-4 for grave danger). Saint-Louis's risk document already names the Radier du Gol and the "Radier 3 ravines". The list goes into the PICS (action 6), with who puts out the barrier, and the trigger includes orange *fortes pluies et orages* vigilance, not only cyclone alerts.

* Suggested formulation: check with a health worker before sharing.

Corrections: the deaths were in the rains of 28–29 January, not during Belal itself. The claim that every person injured in Gamède (2007) had ignored the driving ban could not be sourced and is dropped. The Saint-Louis ravine is not named in the press (local reports point to Gol-les-Hauts). Radiers on departmental or national roads need the Département or the préfet, not the mayor alone. No evaluation of radier closures was found; the case rests on the deaths themselves.

3. Before December, the ARS reminds every CIVIS GP, pharmacy, and emergency department to give antibiotics at the first visit for fever after rain, cane, field, or clean-up work; cards at the cane platforms and the Saint-Pierre market; boots and gloves for clean-up crews

PARTIALLY CONFIRMED | PHASE: SAUVEGARDE | PUBLIC HEALTH · SKEPTIC · FRONTLINE · HISTORIAN | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
ARS La Réunion, with GPs, pharmacies, and CHU Sud; the communes for their crews	Letter and cards by 30 November 2026; reissued within 72 hours of each cyclone or heavy-rain episode	Within the ARS budget; boots and gloves from commune budgets	Leptospirosis deaths from late treatment

Leptospirosis is curable, and it is killing people this year: 250 cases and 3 deaths island-wide to 9 October 2026 (Santé publique France). In Santé publique France's 17 April 2026 bulletin, 89% of cases were men, mostly aged 45–74; 61% were hospitalised, and 28% of those needed critical care. By 28 May, the South sector had 84 of 191 cases, 13 of them in Saint-Louis and 9 in Saint-Pierre. The exposed are cane and market-garden workers, stock breeders, and clean-up crews, and their first contact is a GP who may see "flu". A Réunion study of 117 hospitalised patients found a median four days from first symptoms to antibiotics, longer when the patient saw a GP first (Lebeau-Desmoulin et al., *Méd Mal Infect* 2020). The ARS already tells clinicians to treat on suspicion. This action turns that into a direct reminder before the season, and puts the same message, "fever after mud or water: see your doctor today and say *leptospirose*", on cards at the Le Gol cane platforms and the Saturday market. The cards must go out before the cane harvest ends (18 December in 2025). The vaccine has been free for all adults since 29 September 2025 (ARS and CGSS), with the most exposed prioritised, at CHU Nord, CHU Sud, and occupational health services. It stays an offer for the most exposed, alongside boots, gloves, no wading, and early care: protection builds over the first month after two doses; it is not this season's main defence (Do not 9).*

Corrections: the evidence that early antibiotics save lives is weak. The Réunion study found that delay was not linked to severity, and a Cochrane review found too little trial evidence either way (Brett-Major and Coldren 2012). The action rests on French clinical guidance and biological plausibility. The South's rate was 18 per 100,000, though it had 39% of cases; the East's 34 per 100,000 was the highest. Le

* Suggested formulation: check with a health worker before sharing.

Tampon (CASUD) and Saint-Benoît (East) had the most cases, 20 each. "South 59% of cases in 2024" could not be sourced. No ARS document recommends doxycycline prophylaxis, so this briefing does not.

4. By 15 November, record every rough sleeper on the Saint-Pierre seafront and around Ravine Blanche, and have someone they know walk them to the commune shelter at each orange alert

PARTIALLY CONFIRMED | PHASE: AVANT | FRONTLINE · PHILANTHROPIST · EMERGENCY MANAGER | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
CCAS of Saint-Pierre, with outreach partners confirmed through SIAO 974 (115) and the city's shelters	**Roll-call by 15 November 2026; walk-in at each orange alert**	**€50,000 (F01)**	**Deaths of people who will not go to a shelter on a leaflet**

In Belal (15 January 2024), the only cyclone deaths on Réunion were three homeless people, in Saint-Gilles, Salazie, and Le Tampon (AFP, via Outremers360). Réunion La 1ère reported that the Saint-Gilles man had refused shelter; the Interior Minister said others "auraient refusé" (conditional). None was in CIVIS, but Saint-Pierre is the south's largest town, and its rough sleepers gather on the seafront by Ravine Blanche, beside the Saturday market. Island-wide, about 1,600 people have no home, more than 900 of them sleeping outside (Assemblée nationale, QOSD548). The roll-call records each person's name, phone if any, and usual spot. At orange, someone they already know walks them in. Leaflets and an open door are not enough (CINOR Do not 6).

* Suggested formulation: check with a health worker before sharing.

Corrections: the panel named a Croix-Rouge unit and a Secours catholique day centre in Saint-Pierre; neither could be found. What exists is a weekly street café run by Secours catholique with Fraternité Lataste (2022). So the money goes through the CCAS, and partners are confirmed with SIAO 974 first. The "0.7 shelter places per 1,000 people, against 3 in mainland France" figure is the Fondation pour le logement's, not official. No recent count of rough sleepers in Saint-Pierre was found. Amount: 2 workers × 5 months × €3,500 plus kits and a reserve (an estimate).

5. By 30 November, CIVIS and its operators pre-agree with EDF a ranked list of grid-dependent pumps and plants with generators, a sector-by-sector re-pressurisation protocol, earlier bottled water, and home dialysis and oxygen patients on the priority tanker list

PARTIALLY CONFIRMED | PHASE: SAUVEGARDE | EMERGENCY MANAGER · ECONOMIST · SKEPTIC | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
CIVIS (water service), with its operators, EDF, and the ARS	30 November 2026	CIVIS budget; generator hire not priced	The water cut that comes after the all-clear

In Garance (February–March 2025), Les Avirons and Petite-Île were cut on purpose before the red alert, part of about 39,000 people. In CIVIS, the cut peaked on the afternoon of 1 March, after the all-clear, at about 45,000 people, and the ARS chart labels it "pannes électriques périmètres irrigués Sud": about half of the island's cuts were electrical, not broken pipes. When supply came back, people refilled everything at once and the reservoirs emptied again. The State's bottled water went only to networks cut totally for more than 72 hours after the alert lifted (ARS, *bilan eau potable* Garance). So, for CIVIS: a ranked list of every grid-dependent pump, booster, and plant, with its generator, agreed with EDF before the season rather than improvised; re-pressurisation sector by sector, with a message not to refill everything at once; bottled-water points fixed per commune, opening at 24 hours for the communes cut pre-emptively; and home dialysis and oxygen patients added to the tanker list. In 2025 only hospitals and dialysis centres were on it, and Réunion's dialysis need is five times the national rate, with end-stage kidney-failure prevalence three to four times (Senate report r25-554).

* Suggested formulation: check with a health worker before sharing.

Corrections: EDF prioritisation and generators were used in 2025, but ad hoc and island-wide. The new step is to pre-agree them for CIVIS. CIVIS was the least affected of the five intercommunalities, and its count includes Cilaos. The refill surge was recorded island-wide, not for CIVIS in particular. The €30,000–80,000 generator estimate had no source, so it is not shown. The operators of Saint-Louis, Étang-Salé, and Les Avirons could not be confirmed.

6. By 25 November, the CIVIS president and all six mayors sign the intercommunal safeguard plan with this annex, two-bank staging at the Rivière Saint-Étienne, and the Cilaos annex

PARTIALLY CONFIRMED | PHASE: AVANT | EMERGENCY MANAGER · HISTORIAN · ECONOMIST | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The president of CIVIS, with the mayors of Saint-Pierre, Saint-Louis, L'Étang-Salé, Les Avirons, Petite-Île, and Cilaos	**25 November 2026 (legal deadline 26 November)**	**Staff time**	**Actions 1–5 and 7–8 staying voluntary when the alert comes**

CIVIS must adopt its PICS by 25 November 2026 (legal deadline 26 November, AMF; loi Matras; CSI L731-4), co-adopted by the president of CIVIS and each mayor with a PCS. The annex names the triggers and owners of this briefing: the radier list (action 2), the rough-sleeper roll-call (action 4), the water protocol (action 5), and the pré-alerte stock (action 8). It also stages both banks of the Rivière Saint-Étienne. In Gamède (25 February 2007), one of the two RN1 bridges collapsed. The new bridge opened on 12 June 2013, more than six years later, and upstream there is only the Ouaki ford, which floods. CHU Sud's emergency department and the Dassy plant are on the Saint-Pierre bank. The CHU's Hôpital de Saint-Louis, on the west bank, has no emergency department, but it can serve as the staging site at red alert, with an ambulance, a water team, and a generator for Saint-Louis, Étang-Salé, and Les Avirons. The plan also carries the cirques annex for Cilaos.

* Suggested formulation: check with a health worker before sharing.

Corrections: the panel said five mayors; Cilaos's mayor co-signs too. Gamède destroyed one bridge of two, not the only crossing; the upstream bridge stayed open. No public record shows the status of the CIVIS PICS: ask CIVIS. The CIVIS review after Garance lists a flood warning system as a medium-term action, so it will not be ready this season.

7. By 30 November, enrol isolated older and disabled people in the Saint-Pierre and Saint-Louis registers of vulnerable people, and give each a named neighbour who checks on them at alerte rouge, on day 2 of a water cut, and on hot days

PARTIALLY CONFIRMED | PHASE: AVANT | FRONTLINE · PUBLIC HEALTH · PHILANTHROPIST | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
The mayors of Saint-Pierre and Saint-Louis (the register), through their CCAS, with neighbourhood associations	30 November 2026	€52,500 for 3 coordinators in Saint-Pierre and Saint-Louis (F02)	Older people left alone through a water cut or hot days

The register (CASF L121-6-1) covers people aged 65 and over, those aged 60 and over unfit for work, and disabled adults living at home; décret 2026-590 (3 July 2026) widened what it may be used for, and from 31 January 2027 people receiving APA or PCH are enrolled automatically. The work this season is to fill it in Saint-Pierre and in the hauts of Saint-Louis (Les Makes, Plateau Goyaves), and to give each person a *voisin référent* who walks round at alerte rouge, on the second day of a cut, and on hot days. Unccas found in July 2026 that about half of CCAS struggle to reach the people on their registers, and a quarter are short of staff, so the money pays for coordinators, not hardware. The basis is thin: France's 2006 heat plan was followed by about 2,065 excess deaths against 6,452 expected (Fouillet et al. 2008), and Philadelphia's warning system was credited with 117 lives over 1995–98 (Ebi et al. 2004). Both are temperate heatwaves. The model expects about one heat death in CIVIS, which is why this ranks seventh.

* Suggested formulation: check with a health worker before sharing.

Corrections: the register is not a cash list: its permitted uses do not include cash transfers, so the island trigger cash (RE-F01) needs the CCAS's own aid lists, not the register. A dialysis or oxygen patient under 60 is eligible only if recognised as disabled; action 5 covers them. Réunion has no Météo-France heat vigilance, so "hot days" needs a trigger set with the ARS. No public record shows whether these communes keep a register. The action is narrowed to Saint-Pierre and Saint-Louis, the two CCAS the money (F02) pays: no Petite-Île or Les Avirons CCAS record at this scale was found, and their mayors keep the register as the law requires.

8. By 15 December, stock 1,500 water-storage kits and 1,500 no-cook food kits on both banks of the Rivière Saint-Étienne, handed out at pré-alerte or alerte orange, before a forecast cut, to registered households and to the communes cut pre-emptively in Garance

PARTIALLY CONFIRMED | PHASE: PENDANT | FOOD SUPPLY · PHILANTHROPIST · ECONOMIST · EMERGENCY MANAGER

ADAPTATION INVENTORY: ANTICIPATORY CASH (BANGLADESH, NEPAL) FOR THE ISLAND CASH LINE ONLY

OWNER	BY WHEN	COST	PREVENTS
The five CCAS, with the Croix-Rouge / PIROI and the Banque alimentaire des Mascareignes	Stock in place by 15 December 2026; handed out at pré-alerte or alerte orange, before a forecast or announced cut	€166,500 (F04 €127,500 + F05 €39,000)	Households with no safe stored water or food for the first three days

The gap the State leaves is before the cut, not after it. In Garance, bottled water reached every network cut for more than 72 hours after the alert lifted, but Les Avirons and Petite-Île were cut before the red alert, and the island-wide drinking-water restriction lasted about two weeks. So the kits go out at pré-alerte or alerte orange, before a forecast or announced cut, never at alerte rouge, which is lockdown: a water-storage kit (jerricans, purification tablets (Aquatabs), and a container cover; €85, the set unit cost) and a three-day no-cook food kit (€26), to households on the registers (action 7) and in the two pre-emptively cut communes. The stock sits on both banks, because everything imported reaches Saint-Pierre from Le Port over the Saint-Étienne bridge. PIROI shipped 100–140 tonnes of water, hygiene kits, and jerricans from Réunion to Mayotte after Chido, through the CCAS. The CCAS also prepare their aid lists for the island trigger cash (€475 a household, RE-F01).

Corrections: the panel's trigger (a cut of more than 72 hours) duplicated the State's bottled water and is replaced by pré-alerte or alerte orange, before a forecast cut. Water kits were cut from 2,400 to 1,500 and food kits from 2,000 to 1,500 at target: Garance hit the southwest lightly, and food is not what runs out. Whether the Saint-Pierre and Saint-Louis CCAS are in the food bank's network (11 CCAS

* Suggested formulation: check with a health worker before sharing.

and 30 associations in 2021) is unverified.

9. Watch the weekly Saint-Pierre wholesale price bulletin and the monthly fresh-food index; after a cyclone, ask the préfet to activate the bouclier qualité-prix and, if prices spike, a temporary price decree

PARTIALLY CONFIRMED | PHASE: SAUVEGARDE | FOOD SUPPLY | ADAPTATION INVENTORY: NONE FOUND

OWNER	BY WHEN	COST	PREVENTS
Préfecture (DAAF and the price services), with the communes and the food-aid associations	Trigger agreed by 30 November 2026; watched through April	Staff time	A post-cyclone vegetable-price spike falling on the 42% of Saint-Louis who are poor

The southwest grows the island's vegetables, and its wholesale market in Saint-Pierre handles about 30% of market-garden volume (Agreste, DAAF). Cyclones hit those prices fast. INSEE's fresh-products index rose 23.4% in February 2024, after Belal, and 19.1% in March 2025, after Garance. The DAAF publishes a price bulletin (*mercuriale*) for the market, apparently weekly; INSEE's index is monthly, with about four weeks' lag. The trigger: staple vegetables above 1.5 times their four-week average in the bulletin, or the fresh index up 10% in a month. Then the préfet is asked to activate the *bouclier qualité-prix* (Code de commerce L410-5) and, for a spike, a temporary price decree of up to six months (L410-2; it needs the Government). The CINOR briefing (action 9) carries the same island-wide request; this adds the southwest's faster price series. Under the drought order, market gardens keep the existing exemption for irrigated perimeters, but not priority over drinking water.

Corrections: the panel's "+22.2% after Belal" was the 2024 annual change. Saint-Pierre's is not "the island's only" wholesale market, as far as any source shows. The latest bulletin found was dated 31 December 2025, so check it is still published. Asking for irrigation priority over drinking water would be contraindicated: the drought order puts drinking water first. No price decree was requested after Belal.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal. "Communes" are the five CIVIS communes (Cilaos signs the PICS too); "Associations" include the ARS partner associations, the food bank, and neighbourhood groups.

Action	ARS	CIVIS	Water operators	Communes	CCAS	Associations	Croix-Rouge	Préfecture	Département
1. Breeding-site rounds and covers	C	C	I	A/R	C	R		I	
2. Close flooded radiers		I		A/R				C	R
3. Leptospirosis: treat early, boots and gloves	A/R			R		I			
4. Rough-sleeper roll-call	I			R	A	R	R	C	
5. Water after the all-clear	C	A	R	R	C			C	
6. PICS and Saint-Étienne staging	C	A/R	C	R	I			C	
7. Register and neighbours	C			A	R	R			
8. Pré-alerte kits on both banks		C		I	A	R	R	I	
9. Food-price trigger				I		C		A	

What the chart shows: the communes do the work in six rows and are accountable for three: the cover rounds (1), the radiers (2), and the register (7). The ARS is consulted on the rounds rather than accountable, because its work is already State-funded. The CCAS are accountable for the two rows that carry most of the donor money besides covers, the roll-call (4) and the kits (8); the ARS for the leptospirosis row (3). Three rows need a decision rather than money: the mayors' radier closures (2), CIVIS's water protocol with EDF (5), and the PICS signatures (6). No row depends on the State paying first.

LARGEST UNCERTAINTY

How many southwest households store water uncovered: no survey exists, and covers are a third or more of every tier

At the ECB reference rate of 14 October 2026, €1 = US$1.1195, fixed for all six Réunion briefings. **Floor** = roll-call €50,000 + 2 coordinators €35,000 + covers for 6,500 households €84,500 + 1,000 water kits €85,000 + 1,000 food kits €26,000 = €280,500. **Target** = €50,000 + 3

* Suggested formulation: check with a health worker before sharing.

coordinators €52,500 + covers for 10,000 households €130,000 + 1,500 water kits €127,500 + 1,500 food kits €39,000 = €399,000. **Ceiling** = €50,000 + €52,500 + covers for all 25,800 poor households €335,400 + 3,000 water kits €255,000 + 2,000 food kits €52,000 = €744,900. Above that, door-to-door delivery binds before the peak, not money. Set unit costs, as fixed by the CINOR briefing: cover €13 delivered, water-storage kit €85, food kit €26. Not counted here: the island trigger cash RE-F01 (€475 a household, in `reunion-island-funding.json`), the leptospirosis campaign (ARS and CGSS), CIVIS's generators (its own budget), and the communes' radier barriers. The target fell 24% from the panel's €527,500: the water kits' 72-hour trigger duplicated the State's bottled water, the cover target was resized to what crews can reach, and the rough-sleeper line was held flat.

RECIPIENT	USE	AMOUNT (TARGET)	MECHANISM	BASIS	VERDICT
CCAS of Saint-Pierre, with partners confirmed through SIAO 974 (115)	Action 4: rough-sleeper roll-call and walk-in	€50,000 ($55,975)	Direct grant; readiness	2 workers × 5 months × €3,500 + kits and a reserve (estimate). No cost per life is published; the only cyclone deaths on Réunion in 2024 were three homeless people	Partially confirmed
CCAS of Saint-Pierre and Saint-Louis	Action 7: register-and-neighbour coordinators in Saint-Pierre and Saint-Louis	€52,500 ($58,774)	Top-up; readiness	3 × 5 months × €3,500 (estimate). Philadelphia warning system, 117 lives (Ebi et al. 2004); temperate, weak transfer	Partially confirmed
The five communes' vector-control crews, with the ARS partner associations (ARS consulted)	Action 1: covers in the breeding-site rounds	€130,000 ($145,535)	Pre-positioned stock; readiness	10,000 × €13 delivered. Taborda et al. 2022 (Girardot, Colombia): US$20.9 a household, US$12,097 per 1-point cut in infection probability against a US$19,125 threshold; *Ae. aegypti*, weak transfer	Partially confirmed
Croix-Rouge française / PIROI, through the CCAS	Action 8: water-storage kits at pré-alerte	€127,500 ($142,736)	Pre-positioned stock; released on the trigger	1,500 × €85 (set unit cost; estimate)	Partially confirmed

* Suggested formulation: check with a health worker before sharing.

RECIPIENT	USE	AMOUNT (TARGET)	MECHANISM	BASIS	VERDICT
Banque alimentaire des Mascareignes, through the CCAS	Action 8: no-cook food kits at pré-alerte	€39,000 ($43,661)	Pre-positioned stock; released on the trigger	1,500 × €26 (€3.70 a person a day × 2.35 × 3 days; estimate)	Partially confirmed

The funder's one thing: the State pays after the storm, at about €475 a household. What nobody pays for is the person who knocks: the crew member who leaves a cover on the drum, the coordinator who knows which old man in Les Makes lives alone. With the State's share of those job contracts cut in 2026, release the cover money in tranches against households counted as reached.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives here. Cards 1–5 and 9 apply to every Réunion zone and are written once for the island (RE-X01 to RE-X05, and RE-X08); cards 6–8 are specific to the Southwest.

1. Do not call this season an "El Niño drought"

CONTRAINDICATED ISLAND-WIDE (RE-X01)

El Niño on Réunion: rain on average in surplus, a clearly hotter season, and no change in the island's cyclone exposure (Météo-France). The shortage is a carried-over deficit and leaking networks: Saint-Pierre loses about 4 litres in 10. A drought message hides the two killers of this zone's record, mosquitoes bred in stored water and rain on ravine crossings.

* Suggested formulation: check with a health worker before sharing.

Instead: use the premise: a record carried-over deficit and leaking networks, in a hot El Niño year in which rain, when it comes, brings its own dangers.

2. Do not make insecticide fogging the visible response to dengue or chikungunya

`CONTRAINDICATED` `ISLAND-WIDE (RE-X02)`

Deltamethrin has been used on Réunion since 2006, and resistance in *Ae. albopictus* was detected in 2017. The ARS already limits spraying to the area around cases "to avoid creating resistance". Fogging looks like action and leaves the breeding sites in place.

Instead: keep spraying to the ARS's case-centred use, and put the effort into the door-to-door rounds (action 1).

3. Do not tell households to "store water" without saying "covered, emptied and scrubbed weekly"

`CONTRAINDICATED` `ISLAND-WIDE (RE-X03)`

Each restriction notice makes households fill drums, buckets, and tanks: the containers mosquitoes breed in, just as the hot, wet season starts. Four of the five CIVIS communes are on drinking-water *alerte* now, in the streets where the 2019 dengue and 2025 chikungunya epidemics began.

Instead: "Couvrez vos réserves (couvercle ou moustiquaire), videz-les et frottez-les chaque semaine", on every water-cut notice (RE-01), and said aloud in Creole at the door (action 1).

4. Do not push chikungunya vaccination with Ixchiq for people aged 65 and over, or put chikungunya vaccine stock ahead of dengue and leptospirosis

`CONTRAINDICATED` `ISLAND-WIDE (RE-X04)`

The HAS advised suspending Ixchiq for people aged 65 and over on 25 April 2025, after serious adverse events in older people, most of them on Réunion; that advice stands, and the EU restricted it further in 2026. The HAS estimates 66% of Réunion now carries chikungunya antibodies and judges a new epidemic "peu probable".

* Suggested formulation: check with a health worker before sharing.

Instead: follow the HAS (24 April 2026): Vimkunya for people aged 65 and over and for 12–64-year-olds with comorbidities, only if an epidemic resumes. In the Southwest, spend the effort on dengue breeding sites and on treating leptospirosis early (actions 1 and 3).*

5. Do not let tanker water be taken as drinking water

`CONTRAINDICATED` `ISLAND-WIDE (RE-X05)`

In the January 2025 drought, the ARS recorded distribution units on tankers marked "non alimentaire", serving 36,240 people. In Garance, more than 130 non-potable tanks were deployed across the island.

Instead: label every tanker "non potable" in French and Creole, and hand out drinking water at the same point (action 5).*

6. Do not drive across a flooded radier, or treat the alert driving ban as advice

`CONTRAINDICATED` `THE SOUTHWEST`

On 28 January 2024, a young doctor drove onto a flooded ravine radier in the hauts of Saint-Louis while witnesses shouted at him not to cross; he died. The next morning a father died the same way on chemin Fortuné Grosset, in Petite-Île. Neither crossing was under a cyclone alert. A radier that is dry most of the year looks crossable in the dark.

Instead: barriers and staff at listed radiers from orange heavy-rain or cyclone vigilance (action 2), and one message: "radier inondé, demi-tour".

7. Do not ration by emptying the pipes on a rota, or tell people the first water back is safe

`CONTRAINDICATED` `THE SOUTHWEST`

When pipes empty, dirty water gets in, and the first water back carries it. Studies of intermittent supply in Hubli-Dharwad, India, found bacteria concentrated in that first flush and frequent below about 10 psi (Kumpel and Nelson). In Mayotte in 2023, the water syndicate's head blamed the cuts themselves for degrading the network to about 70% efficiency, and Santé publique France named storage containers as breeding sites. No CIVIS rota cuts were found in October 2026; this card is for if they come.

* Suggested formulation: check with a health worker before sharing.

Instead: keep the network pressurised (above about 1.2 bar) rather than empty, publish a fixed timetable, and say "laissez couler, ne buvez pas la première eau".*

8. Do not threaten households with sanctions for stored water while water cuts force them to store it

`CONTRAINDICATED` `THE SOUTHWEST`

The prefectoral order of 28 May 2018 requires breeding containers to be removed, lets mayors serve formal notice, and charges the clearance cost to the household. Using it against stored water during rationing punishes people for doing what the cuts make them do, in the poorest streets. This card is judgement: no trial of punitive dengue control was found, but community mobilisation, the opposite approach, has trial evidence (Camino Verde).

Instead: a cover and a visit before any notice (action 1); keep formal notice for abandoned tyres and dumped containers.

9. Do not make leptospirosis vaccination the main response this season *

`CONTRAINDICATED` `ISLAND-WIDE (RE-X08)`

The vaccine (Spirolept) covers one serogroup, Icterohaemorrhagiae, and its efficacy has never been tested in a clinical trial. It needs two injections 15 days apart, a booster at 4–6 months, then one every 2 years if exposure continues. Protection builds over the first month after two doses; it is not this season's main defence. The test that identifies the serogroup has not been reimbursed since 2014, so the share of cases it covers has not been measured in recent years.

Instead: antibiotics at the first visit, boots and gloves for clean-up, and no wading (action 3). The vaccine has been free for all adults since 29 September 2025; offer it to the most exposed, alongside that prevention, not instead of it. It is given at CHU Nord, CHU Sud, and occupational health services, so taking it to cane workers would need the ARS to run mobile sessions.

* Suggested formulation: check with a health worker before sharing.

WHAT HAS HAPPENED HERE BEFORE

THE RECORD

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
1980 (Jan)	Cyclone Hyacinthe, record rain (warm-neutral, ONI +0.6)	25 dead island-wide; no commune breakdown found	—
2005–06	Chikungunya epidemic; the Saint-Pierre arrondissement among the hardest hit (La Niña, −0.9)	About 266,000 infected, 203 death certificates island-wide	—
2007 (25 Feb)	Cyclone Gamède; one of the two RN1 bridges over the Rivière Saint-Étienne collapses (El Niño, +0.6)	2 dead on Réunion, one of them a driver from Le Tampon, and about 90 injured (where the other died is not settled); €143M damage; Saint-Louis and Saint-Pierre declared natural-disaster zones	New 694.5 m bridge, opened 12 June 2013, six years later
2007 (12 May)	Southern swell, 11.3 m at Saint-Pierre (austral winter; neutral)	2 dead when a small boat broke up near the harbour	—
2019	Dengue epidemic, centred on Saint-Louis, Saint-Pierre, and Étang-Salé (El Niño, +1.0)	18,191 confirmed cases, 14 deaths (9 direct) island-wide	—
2024 (15 Jan)	Cyclone Belal, the first violet alert (El Niño, +1.8)	3 homeless people dead island-wide, none in CIVIS	State fund paid 56 uninsured people about €29,000, about six months later
2024 (28–29 Jan)	Heavy rain two weeks after Belal (El Niño, +1.8)	2 dead on flooded radiers, in the hauts of Saint-Louis and in Petite-Île	Nothing found

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
2025 (Jan–Jun)	Chikungunya epidemic; Ravine Sheunon (Étang-Salé) the most active focus in January (cool-neutral, −0.5)	About 54,500 confirmed, 45 deaths island-wide	Vector-control job contracts reinforced, then cut in 2026
2025 (28 Feb)	Cyclone Garance (cool-neutral, −0.5)	No deaths in CIVIS; Les Avirons and Petite-Île cut before the alert, power failures cut supply after it	CIVIS review: dyke repairs; a flood warning system, medium term
2026 (Jan–Oct)	Leptospirosis; March the worst month since 2008 (neutral)	250 cases, 3 deaths island-wide; South sector 44% of cases to May	Free vaccine campaign continues
2025–26	Driest rainy season in 54 years of records (−45%, provisional; −60 to −70% in the hauts), the second deficit season in a row after −30% in 2024–25	No deaths; drinking water at *alerte* in four CIVIS communes from 10 October 2026	—

The recurrence nobody has noticed: the island's last three big arbovirus epidemics (2005–06, 2019, and 2025) all centred on or passed early through this dry southwest belt, and the ENSO phase was different each time. Only 2019 fell in an El Niño year, and it was the one that killed 14. So the southwest is the island's arbovirus nursery whatever the ENSO phase, and the rain deaths of January 2024 came under no cyclone alert at all. The bridge that failed in 2007 took six years to replace.

WHERE THE EXPERTS DISAGREE

UNRESOLVED

- **Leptospirosis is the bigger killer here** (public health lens: curable, 28% of hospitalised cases in critical care) versus **dengue is** (historian: 2019 killed 14, all epidemics start here). This briefing ranks dengue first because the rounds reach the most people before the peak, and leptospirosis third because its evidence for early antibiotics is weak. A count of 2026 leptospirosis deaths by sector would settle it.
- **Make the operators supply drinking water during their own cuts** (economist: it puts the cost of leaks on the operator, at no public cost) versus **nothing can change a contract before the peak**. Saint-Pierre's delegation (Runéo) was reported to run 2018–2029 (unverified); the clause belongs in its renewal, not this season. It is left out of the ranked actions.

* Suggested formulation: check with a health worker before sharing.

- **Vaccinate cane workers before Christmas** (public health, frontline) versus **the vaccine is not this season's answer** (skeptic, verifier). Taken both ways: offer it, but do not make it the response (Do not 9).
- **Food is a weak link** (food lens: one bridge, a 13% calorie self-sufficiency) versus **water and disease are** (every other lens). After Garance, no shortage of food was found in CIVIS; food stays in the kits and the price trigger.

WHAT NOBODY COVERED — BLIND SPOT

No lens found out how many southwest households store water, in what, and uncovered. That one number sizes the biggest donor line (covers), sets where the rounds go first, and decides whether the ARS's existing visits already reach these streets. A one-week sample survey by the vector-control crews in November, before the covers are bought, would answer it. Nor did any lens find a count of who in CIVIS depends on power for health at home (dialysis, oxygen, insulin fridges), which action 5 needs and no public source holds.

HOW TO READ THIS — METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale. They are not neighbourhood figures. The El Niño projection covers *heat only*; drought, flood, fire, smoke, and crop failure are additional to it and are carried here by the historical record rather than by a published number. The study's map publishes a row for the Saint-Pierre arrondissement (2), which CIVIS shares with CASUD and Cilaos (318,130 people). Scaled by population, CIVIS's share is 2 × 179,046 / 318,130 = 1.13, about 1.1. That is our arithmetic, not an Impact Lab finding, and it ignores that CIVIS is mostly coast, hotter than the hauts of CASUD.

HOW THIS BRIEFING WAS PRODUCED — METHODOLOGY

- **Scope.** The location was taken as given: the Southwest of Réunion, the five communes of CIVIS without Cilaos, the sixth zone of six in the Réunion set. Climate Impact Lab impact region, as the report records it: REU.Re7bdb3a99bec931b, the whole island (about 890,000 people;

* Suggested formulation: check with a health worker before sharing.

label unconfirmed). CIVIS has no row of its own: it shares the Saint-Pierre arrondissement row. Sub-commune detail is used for hazard exposure and action design, not for death counts.

- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts (51-member ensemble) applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline, for June 2026 – February 2027. It covers heat only. The arrondissement row is the 6-month field (`6mo_hotonly_total_mean`) of the study's map (Flourish visualisation 30298258), as resolved for the CINOR briefing; the CIVIS figure is a population scaling of that row, shown with its arithmetic. It is never added to the Impact Map's long-run projections or quoted from the map's GDP-denominated mortality. Disease, flooding, and water are carried by the historical record.
- **Expert panel.** Eight simulated expert lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst) each researched this place independently and in parallel, from web sources, to a fixed brief. Each worked from a shared pack of facts already verified for the Réunion set, and each was told to re-check any fact it used.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias (whether the evidence behind an agreed action came from a setting like this one) before it counted in an action's favour: the six-lens covers action rests on *Ae. aegypti* trials, and says so. Contradictions were kept, not resolved by dropping a side. Actions were ranked by expected lives saved per unit of effort before the peak, each was given a named payer and trigger or marked unfunded, and the funding placements were reconciled against the ranked list.
- **Verification.** Six verifier agents checked every recommendation on three tests: evidence (the primary source and its effect size), transferability (whether that evidence came from somewhere like here), and feasibility (whether it can be done here before the peak). The financial lines were also checked for availability in French law, a named payer, a trigger, and whether they already exist. The funding envelope was checked for real recipients, published unit costs, and duplication, then re-summed. The Do not cards and every row of the record were checked at source, with the NOAA ONI for each season. The commune populations, households, and poverty rates were checked against INSEE, and the restriction levels against VigiEau, on the day.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.
- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Consulted, from the 96 entries embedded in the inventory page, as recorded for the CINOR briefing (the download link is a registration form). It holds no entry for France, Réunion, small islands, mosquito-borne disease, or leptospirosis. The only near

* Suggested formulation: check with a health worker before sharing.

precedent, anticipatory cash for floods (Bangladesh, Nepal), applies to the island cash line, and is shown where it applies.

- **Health wording.** Passages where a wording error could hurt someone (leptospirosis, its treatment and vaccine, the chikungunya vaccine, drinking water, and tap water after a cut) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented; where data is thin, the report says so and labels its estimates. One exchange rate (ECB, 14 October 2026) and one set of unit costs are used across the Réunion set. Every source is listed below with its verification status.
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. Some ARS and DEAL PDFs returned 403 to one verifier and opened for another; Linfo and Réunion La 1ère pages were partly blocked. The operators of Saint-Louis, Étang-Salé, and Les Avirons, the status of the CIVIS PICS, and any Saint-Pierre count of rough sleepers could not be found. Hyacinthe (1980) is labelled *neutral* across the set (NOAA ONI reached +0.5 for only three overlapping seasons, short of NOAA's five). No commune-level record of the 1982–83, 1997–98, or 2015–16 El Niño seasons was found in CIVIS.
- **Revised 2026-10-15 after the set audit (fixes applied: Gamède toll, 2 dead on Réunion, replacing "no deaths"; the Météo-France line with its cyclone clause and the settled deficit wording; the 2019 dengue toll re-cited to the Préfecture and ARS release; the leptospirosis profile cited to SPF's 17 April bulletin; the settled vaccine wording; the Belal shelter wording; the PICS deadline and co-adoption; the communes, not the ARS, accountable for the cover rounds; action 7 narrowed to Saint-Pierre and Saint-Louis, the CCAS that F02 pays; Unccas "about half"; the kit trigger and contents; the January 2024 price figure dropped, as no cited page shows it; island-wide record events linked to the island file; funding amounts stored at the ceiling).** No recent count of rough sleepers in Saint-Pierre was found. Tiers and envelope are unchanged.
