EL NIÑO ACTION BRIEFING · 19 OCTOBER 2026

Hoboken, New Jersey (07030)

In Hoboken, El Niño arrives as a wet, stormy winter on a city built over marsh, with its surge wall still under construction. The deaths come in the days after the water, in a few hundred units where the elevators stop and the oxygen machines go quiet.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
A Hudson County region (inferred; not resolved)	None published for the US or New Jersey	Global 6-month figure 239,000 ± 11,000 (Sep 2026 – Feb 2027); not scaled here	Nor'easter surge and cloudburst flooding, then days without power or elevators

13/13 recommendations checked. 1 confirmed, 12 corrected, 0 unverified, 0 contraindicated. Four practices are flagged do not do. Exposure figure: Climate Impact Lab, September 2026, pre-peer-review, heat only. No figure is published for anywhere in the US, so none is borrowed or scaled. The funding target fell 17% in verification, from $175,000 to $145,000, because New Jersey already requires carbon monoxide alarms in most rentals and one placement had no working channel.

EXECUTIVE SUMMARY — AT A GLANCE

40.74°N 74.03°W, United States of America · Natural Earth

- **The risk.** In Sandy about 20,000 residents were stranded for days, and seniors in high-rises went without power, elevators, or medication.
- **First action.** Hoboken OEM lists, by 1 December, every resident of the senior towers and Marian Towers who cannot manage stairs or runs on powered equipment.
- **The money.** $40,000 / $145,000 / $215,000; the best dollar buys battery packs and door checks for those residents.
- **Do not.** Do not run a generator, grill, or heater indoors; after Sandy, New Jersey recorded five deaths and 398 poisonings in two weeks.*

* Suggested formulation: check with a health worker before sharing.

WHERE THIS IS — SCOPE

Hoboken is a mile-square city on the Hudson, opposite Manhattan, with about 60,000 people. The request gave ZIP 07030, which is the whole city. Most of Hoboken was once tidal marsh: only Castle Point was high ground, and the west and southwest sit less than five feet above high tide. That is where it floods. Two thirds of homes are rented, and about one resident in five moved in during the past year (ACS 2019–23). The Hoboken Housing Authority has 1,354 units and about 2,400 residents, most of them on the flood-prone west side.

The season ahead: NOAA's Climate Prediction Center (15 October) gives an 80% chance of at least a strong El Niño through early 2027, and favours a warmer and wetter than normal winter along the Eastern Seaboard. That means more rain than snow on most days, an active storm track, and no guarantee against one big storm: the January 2016 blizzard came in the last very strong El Niño. The Rebuild by Design surge wall, promised after Sandy, is still being built; Harborside Park is expected in 2027.

WHAT THIS PLACE SHOULD DO — RANKED

Ranked by expected lives saved per unit of effort before the peak. Backing lenses are shown per action; an action several lenses reached independently is the stronger bet.

1. By 1 December, list every resident of the senior towers and Marian Towers who cannot manage stairs or depends on powered medical equipment, enrol them in Register Ready, pre-stage battery packs, and assign CERT teams to check them 24 and 48 hours into an outage

PARTIALLY CONFIRMED · PUBLIC HEALTH · EMERGENCY MANAGER · FRONTLINE · SKEPTIC · PHILANTHROPIST · FOOD · ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken OEM, with the Housing Authority, Health Department, and CERT	1 Dec 2026	Staff and volunteer time; battery packs about $70,000	Deaths at home in the week after the storm

The buildings are known: the Housing Authority's three 10-storey senior towers (Adams Gardens and Monroe Gardens, 125 units each; Fox Hill Gardens, 200) and Marian Towers (privately owned, about 148 units), about 600 units in all. In Sandy, about 150 elderly Marian Towers tenants had no power, heat, or elevators until the National Guard began evacuating them (NPR). The harm comes after landfall: in

* Suggested formulation: check with a health worker before sharing.

New York, emergency visits by people 65+ rose in the first week after Sandy for kidney disease (rate ratio 1.44) and respiratory disease (1.35) (Weinberger et al., *Am J Epidemiol* 2021), and during the Lower Manhattan blackout the share of hospital admissions aged 80+ nearly doubled, from 17.6% to 33.8% (Gotanda et al. 2015). New Jersey's Register Ready registry (registerready.nj.gov, or dial 2-1-1) and PSE&G's life-support list already exist; the gap is the door knock on day two.

Transferability: strong. The evidence is from the same storm, next door. Whether Hoboken already keeps such a list could not be confirmed either way. HHS emPOWER publishes the count of electricity-dependent Medicare patients for ZIP 07030; read it off the public map before buying batteries.

2. Make sure every Hoboken dialysis patient is on a provider's early-dialysis plan before a forecast major nor'easter

PARTIALLY CONFIRMED | PUBLIC HEALTH | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken Health Department, with dialysis providers	**Plan by 30 Nov 2026; dialysis 24–48 hours before each forecast storm**	**Staff time**	**Deaths and emergency visits from missed dialysis**

This is the only intervention in this briefing with a measured effect on deaths. Among 13,836 dialysis patients in New York and New Jersey, those dialysed early before Sandy had lower 30-day mortality (adjusted odds ratio 0.72, 95% CI 0.52–0.997) and fewer emergency visits (0.80) (Lurie et al., *Am J Kidney Dis* 2015). Providers and the kidney-care emergency network (KCER, 866-901-3773) already schedule early sessions before big storms. The city's job is to check no Hoboken patient falls between them, especially those who cannot get to a clinic once streets flood.*

* Suggested formulation: check with a health worker before sharing.

Transferability: direct, same storm and region. The mortality effect is borderline (the interval's upper bound is 0.997), so treat it as likely rather than certain.

3. Sign renters up for city alerts at their door, basement and garden-level units first, and tell them to move upstairs on any flash-flood warning

PARTIALLY CONFIRMED | FRONTLINE · SKEPTIC | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken OEM, through CERT and volunteers	15 Dec 2026, and every autumn	Volunteer time	Drowning in basement units

Ida's 2021 deaths in New York City were almost all below ground: 11 of 13 were in basement apartments. One Hoboken resident in five moved in during the past year, so last winter's sign-ups have gone stale. Volunteers sign people up at hobokennj.gov/alerts with both email and text (or text 07030 to 888777), and tick *Community*, the category the city uses for most messages; a July 2026 notice said most advisories go by email. The instruction for basement and garden-level tenants is simple: on a flash-flood warning, go upstairs to a neighbour, and do not go out to move a car.

Transferability: strong. Note the city has proposed replacing Nixle with Everbridge ($32,050, April 2026); whether that passed was not confirmed, so check which system is live before printing anything.

4. Ask NJDEP, in writing, for its storm protocol for the open floodwall work sites before each nor'easter, and ask NHSA to confirm the park storage tanks are empty and pumps staged before back-to-back storms

PARTIALLY CONFIRMED | EMERGENCY MANAGER · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
NJDEP, with Hoboken OEM and the North Hudson Sewerage Authority	15 Nov 2026	Staff time	Surge entering through a half-built wall

* Suggested formulation: check with a health worker before sharing.

The Rebuild by Design "Resist" wall was due in 2022, then 2025; work is ongoing in 2026, with Harborside Park expected in 2027. No interim storm protocol for the open sites was found published. The detention parks (ResilienCity Park, Southwest Resiliency Park, 7th and Jackson) already fill during storms and drain afterwards: on 20 August 2026 all three filled and drained within three hours. The risk is a second storm arriving before they empty. NJDEP's community construction liaison line is 1-800-252-0219.

Transferability: direct. The 15 November date is this briefing's proposal, not an existing commitment. The project's current budget could not be confirmed.

5. Test the flood-gate batteries and manual backups before winter, and close streets in the southwest when the Weather Service forecasts heavy rain at high tide

PARTIALLY CONFIRMED | EMERGENCY MANAGER · SKEPTIC · HISTORIAN | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken OEM, with Hoboken Police	Test by 15 Nov 2026; closures on each forecast	Staff time	Drivers and pedestrians caught in floodwater

Hoboken already barricades flood-prone streets and runs automated flood gates. In the coastal storm of late October 2025 the gates failed to deploy for lack of battery charge, and crews lowered them by hand (Patch). On 7 August 2026, 1.45 inches of rain at high tide flooded southwest Hoboken and Madison Street by ShopRite even with the pumps running: H5 moved about 7.3 million gallons (NHSA). The city has declared emergencies early before (29 September 2023, rain at high tide); writing that trigger down makes it routine.

* Suggested formulation: check with a health worker before sharing.

Transferability: direct. New Jersey's Ida deaths (about 30) were mostly in cars.

6. Confirm the shelter generators have been load-tested, and publish how stranded people reach a warm bed on Code Blue nights

PARTIALLY CONFIRMED | EMERGENCY MANAGER · FRONTLINE · PHILANTHROPIST | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken OEM, with the school district, Hoboken Shelter, and Hudson County	30 Nov 2026	Low; Shelter overflow $40,000	A shelter going dark; people outdoors on freezing nights

In Sandy the Wallace School shelter's backup generator failed and about 150 people were moved to churches; a replacement was installed, and no 2026 test record was found. PATH's Hoboken station was closed for seven weeks after Sandy (to 19 December 2012), so commuters can be stranded too. The Hoboken Shelter at 300 Bloomfield Street has about 50 beds plus overflow and serves about 500 meals a day. Hudson County ran a Kearny warming centre from 15 November to 31 March last winter. Code Blue is called on temperature, not by calendar.

Transferability: direct. Whether a bus still runs from Hoboken Terminal to Kearny was only documented for 2015.

7. Put carbon monoxide alarms where the code does not already require them, enforce them where it does, and push the no-generator-indoors rule before the first storm

PARTIALLY CONFIRMED | PUBLIC HEALTH · SKEPTIC · PHILANTHROPIST | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken Fire Department	15 Dec 2026	About $15,000 for 500 alarms	Carbon monoxide deaths during outages

After Sandy, New Jersey recorded five generator-related CO deaths and 398 CO emergency visits in two weeks, against 14 in the two weeks before (NJ Department of Health). New Jersey already requires CO alarms in multiple dwellings with fuel-burning appliances or attached garages, and before a one- or two-family home is leased or sold. All-electric units are exempt, and they are exactly where

* Suggested formulation: check with a health worker before sharing.

someone runs a generator or grill indoors when the power fails. So: free alarms for those units, inspection of missing or dead ones, and the rule said loudly. CO alarms return about $7.20 per dollar in the US (Ran et al., *Am J Emerg Med* 2017).*

Transferability: direct, same storm and state. No effect size was found for alarms handed out just before a disaster.

8. Help households tell their utility they are covered by the winter shutoff protection, keep people on SNAP through the new work rules, and file replacement SNAP after an outage

PARTIALLY CONFIRMED | ECONOMIST · FOOD SUPPLY CHAIN | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hudson County Board of Social Services, with the City	Before 15 Nov 2026, then through March	Staff time	Cold homes and empty fridges stacked on a storm

New Jersey's Winter Termination Program bars shutoffs of electric, gas, water, and sewer service from 15 November to 15 March for people on LIHEAP, USF, SSI, TANF, PAAD, GA, or Lifeline, and for anyone who tells their utility they cannot pay because of job loss, illness, medical bills, or a death in the family. It is a notification, not an enrolment, and many people do not know to make it. SNAP's work rules now run to age 64. After an outage, food lost can be replaced if reported within 10 days. Hudson County has New Jersey's highest food insecurity rate, 19.1% (Feeding America, 2024 data).

Transferability: direct. The 2026–27 Winter Termination notice was not yet published when this was checked.

9. Pre-stock the Hoboken Shelter and pantries with three days of shelf-stable food before December, and ask ShopRite of Hoboken about standby power

PARTIALLY CONFIRMED | FOOD SUPPLY CHAIN · PHILANTHROPIST | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Hoboken Shelter, with Hoboken OEM	1 Dec 2026	About $20,000 (unquoted)	Households without food for the 1–5 days stores and deliveries stop

* Suggested formulation: check with a health worker before sharing.

El Niño barely touches Hoboken's food supply; USDA forecasts US grocery prices up 2.4% in 2026 and 1.8% in 2027, with sugar and coffee the outliers. The chain breaks at the last mile. In Sandy, ShopRite of Hoboken was stripped to its frame and did not reopen until 9 February 2013. Delivery apps stop in a storm, and the households that rely on them are often the ones in action 1.

Transferability: direct. The cost per meal is an estimate; the generator request is an ask of a private business, not a plan.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal.

Action	Hoboken OEM	Housing Authority	Health Dept	CERT	Police	Fire Dept	NJDEP	NHSA	Schools	Hoboken Shelter	County Social Services	Dialysis providers
1. List, batteries, and checks	**A**	**R**	**R**	**R**		**I**						**C**
2. Early dialysis	**I**	**C**	**A**									**R**
3. Door-to-door alert sign-up	**A**	**C**		**R**								
4. Floodwall sites and storage tanks	**R**						**A**	**R**				
5. Flood gates and street closures	**A/R**				**R**			**C**				
6. Shelter power and Code Blue	**A**								**R**	**R**	**C**	
7. Carbon monoxide alarms	**C**	**C**	**C**	**R**		**A/R**						
8. Shutoff protection and SNAP	**I**	**R**									**A/R**	
9. Food stocks	**C**									**A/R**		

What the chart shows: Hoboken OEM is accountable for four of the nine rows and consulted or informed on four more, so this plan is mostly one office's to-do list. The Housing Authority does the work on four rows without being accountable for any. Row 4 needs a letter, not money: the city cannot close a state construction site itself.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR	TARGET	CEILING	LARGEST UNCERTAINTY
$40,000	$145,000	$215,000	How many residents depend on powered equipment (the emPOWER count for 07030)

Floor: carbon monoxide alarms ($15,000) + the first $25,000 of Hoboken Shelter's Code Blue overflow = $40,000. Target: floor + the rest of the Shelter grant ($15,000) + battery packs and door checks ($70,000) + pantry stock ($20,000) = $145,000. Ceiling: target + another $70,000 if the power-dependent count is double the estimate (about 140 people). Unit prices are estimates, not quotes. The target fell 17% in verification: the alarm line halved because the code already covers most rentals, and a $15,000 warming-hub grant through the Jubilee Center was dropped, because the City now owns that building and no current channel was found.

* Suggested formulation: check with a health worker before sharing.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
Hoboken Housing Authority and Hoboken CERT (via the Community Foundation of New Jersey)	Battery packs for oxygen and CPAP users, and door checks (action 1)	$70,000	Direct grant	About 70 packs at about $1,000, both estimated; size it from the emPOWER count first. Registries already exist, so fund the checks and batteries, not a new register.	UNVERIFIED
Hoboken Fire Department	CO alarms for about 500 units the code does not cover (action 7)	$15,000	Direct purchase	About $30 an alarm, estimated. Ran et al. 2017: $7.20 back per dollar.	PARTIALLY CONFIRMED
Hoboken Shelter	Code Blue overflow beds and overnight staff (action 6)	$40,000 ($25,000 at the floor)	Unrestricted grant	About 50 beds plus overflow and about 500 meals a day, by its own listing. Check what Hudson County's Code Blue duty already pays for.	PARTIALLY CONFIRMED
Hoboken Shelter and pantries	Three days of shelf-stable food, about 10,000 meals (action 9)	$20,000	Pre-positioned stock	About $2 a meal, unsourced.	UNVERIFIED

The funder's one thing: Hoboken has hundreds of millions of dollars in concrete going in against the surge, and close to nothing that tells it which people die when the lights go out. Pay for the list and the door knock before the batteries; without the list, every other dollar here lands in the wrong flat.

* Suggested formulation: check with a health worker before sharing.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives here.

Do not run a generator, grill, or heater indoors, in a garage, or near a window *

CONTRAINDICATED CONFIRMED

After Sandy, New Jersey recorded five carbon monoxide deaths from generators, and 398 people were treated for CO in two weeks, against 14 the fortnight before.

Instead: battery packs for medical devices, a CO alarm in every unit, and generators only outdoors, well away from windows and doors.

Do not count on the new floodwall to protect you this winter *

CONTRAINDICATED PARTIALLY CONFIRMED

The Rebuild by Design wall is still under construction and is not confirmed complete for this season. In Sandy, about 20,000 residents were stranded, and about 90% of the city was without power two days after the storm.

Instead: plan for a week without power, elevators, or water pressure. Know who in your building cannot manage the stairs.

Do not stay in a basement unit, or drive or walk through floodwater, when a flash-flood warning is out *

CONTRAINDICATED PARTIALLY CONFIRMED

In Ida (September 2021), 11 of 13 New York City deaths were in basement apartments, and most of New Jersey's roughly 30 deaths were in cars.

* Suggested formulation: check with a health worker before sharing.

Instead: go up, not out. Move to a higher floor, and keep off the roads until the water drops.

Do not read a mild El Niño forecast as a quiet winter

CONTRAINDICATED PARTIALLY CONFIRMED

CPC favours a warmer, wetter winter, so most storms will bring rain rather than snow. But strong El Niño winters have also brought this area's biggest storms: the January 2016 blizzard fell in the last very strong El Niño, and Hoboken declared a state of emergency.

Instead: prepare for rain, surge, and outages, and for one major nor'easter, snow or not.

WHAT HAS HAPPENED HERE BEFORE — THE RECORD

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Dec 1992 (neutral)	Nor'easter: 8.04 ft at the Battery, the third-highest tide on record; PATH flooded at Hoboken	One death in Jersey City (roof debris); PATH out about 10 days	Little
Oct 2012 (neutral)	Sandy: about half the city flooded (the mayor's estimate); three substations failed	About 20,000 stranded; seniors trapped without elevators; ShopRite closed to 9 Feb 2013; PATH Hoboken closed to 19 Dec 2012	Rebuild by Design ($230M HUD) awarded; wet-weather pumps and storage parks built
Jan 2016 (very strong El Niño)	Blizzard Jonas	State of emergency and travel ban; no Hoboken deaths found	Nothing found
Sep 2021 (La Niña)	Ida: 6.54 inches in 8 hours; worst flooding since Sandy in the south and west	No Hoboken deaths found; about 30 across New Jersey, mostly in cars	More storage parks
Sep 2023 (El Niño)	Heavy rain at high tide	State of emergency declared by the mayor	Early declaration used as a tool

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Oct 2025 (La Niña)	Coastal storm; automated flood gates fail on low batteries, lowered by hand	No deaths recorded	Nothing announced
Aug 2026 (El Niño)	1.45 inches at high tide, 3 in/hr peak; pumps run, southwest and Madison St still flood	No deaths recorded	NHSA storm report published

The recurrence nobody has noticed: the water goes where the marsh was. The 1992 nor'easter and Sandy both flooded the old Hoboken meadows on the west side, which is also where the public housing is. This winter that footprint holds a half-built wall and open construction trenches as well.

WHERE THE EXPERTS DISAGREE

UNRESOLVED

- **Move people out before landfall** versus **plan to support them in place**. The Public Health Scientist would move people out of Housing Authority ground floors and senior high-rises before a surge, since most of Sandy's drowning deaths happened at home. The Emergency Manager points out that 20,000 people stayed during Sandy and the real emergency was two weeks of sheltering in place. The briefing does both: ground-floor and basement residents leave on the warning, and upper-floor residents are supported where they are (actions 1 and 3).
- **Insure the renters** versus **fund the people at risk of dying**. The Economist found that two thirds of homes are rented and most renters carry no flood cover, and suggested parametric cover and joining FEMA's Community Rating System. The Philanthropist ranked insurance below lives saved, because it protects property. The insurance gap is real but sits outside this briefing's test; whether Hoboken already holds a Community Rating System class could not be confirmed.

WHAT NOBODY COVERED

BLIND SPOT

No lens found how many Hoboken residents depend on powered medical equipment, or whether the city already keeps a list of them. That single number sizes the top funding placement and decides how big action 1 is. Second, no one quantified cold: a winter outage that stops heating in a high-rise for several days is a hypothermia risk for the same older residents, and no Hoboken data on it was found. Third, combined-sewer flooding carries sewage into basements, and its health effect here was not studied.

* Suggested formulation: check with a health worker before sharing.

HOW TO READ THIS

METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale, roughly 300,000 people. They are not neighbourhood figures. The El Niño projection covers *heat only*; drought, flood, fire, smoke, and crop failure are additional to it and are carried here by the historical record rather than by a published number.

HOW THIS BRIEFING WAS PRODUCED

METHODOLOGY

- **Scope.** The request gave only a ZIP code, 07030, which covers the City of Hoboken. Climate Impact Lab impact region, as the report records it: a Hudson County region, not resolved. Mortality figures exist only at that scale (impact regions average roughly 300,000 people); sub-city detail is used for hazard exposure and action design, not for death counts.
- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts (51-member ensemble) applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline, for June 2026 – February 2027. It covers heat only. It is never added to the Impact Map's long-run projections or quoted from the map's GDP-denominated mortality. Where heat is not the dominant hazard, the historical record carries the hazard instead of a borrowed number.
- **Expert panel.** Eight simulated expert lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst) each researched this place independently and in parallel, from web sources, to a fixed brief. They were given the Midtown East, Manhattan briefing as regional context, with its claims treated as claims.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias (whether the evidence behind an agreed action came from a setting like this one) before it counted in an action's favour. Contradictions were kept, not resolved by dropping a side. Actions were ranked by expected lives saved per unit of effort before the peak, each was given a named payer and trigger or marked unfunded, and the funding placements were reconciled against the ranked list.
- **Verification.** Four verifier agents checked every recommendation on three tests: evidence (the primary source and its effect size), transferability (whether that evidence came from somewhere like here), and feasibility (whether it can be done here before the peak). Financial actions were also checked for availability in this jurisdiction, a named payer, a trigger threshold, and whether they already exist; this

* Suggested formulation: check with a health worker before sharing.

found that CO alarms are already required in most rentals and that early dialysis is already standard practice. Food actions were checked for whether each indicator is published at a usable frequency. The funding envelope was checked for real recipients, published unit costs, and duplication, then re-summed. The historical record was checked event by event, with the ENSO phase taken from NOAA's ONI table; one claimed precedent (a Hoboken emergency declaration on 14 July 2025) was not found and was replaced.

- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.
- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not consulted this run: the inventory renders empty without its interface, and its download sits behind a registration form that was not filled in on anyone's behalf. No action here carries a checked precedent from it.
- **Health wording.** Passages where a wording error could hurt someone (dialysis, medical equipment in an outage, generators, grills, heaters, and carbon monoxide, emergency supplies, and flooding) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented; where data is thin, the report says so and shows the containing geography's number with its arithmetic. Every source is listed below with its verification status.
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. The impact region was not resolved. The emPOWER count for 07030, FEMA's Community Rating System listing, and the current NFIP policy count could not be retrieved. The Everbridge vote and the floodwall's current budget were not confirmed. All unit prices in the funding section are estimates.
