Stuyvesant Town, Manhattan

Here El Niño arrives as a wet, stormy winter, and the new floodwall in front of the complex only works if its gates are closed. In Sandy the danger came after the water: a week without power, elevators, or light in towers with windowless hallways.

IMPACT REGION	EXCESS HEAT DEATHS	WINDOW	DOMINANT HAZARD
A New York County region (inferred; not resolved)	None published for the US or New York	Global 6-month figure 239,000 ± 11,000 (Sep 2026 – Feb 2027); not scaled here	Nor'easter surge and cloudburst flooding, then days without power, heat, or elevators

16/16 recommendations checked. 3 confirmed, 11 corrected, 0 unverified, 2 contraindicated and dropped. Five practices are flagged *do not do*. Exposure figure: Climate Impact Lab, September 2026, pre-peer-review, heat only. No figure is published for anywhere in the US, so none is borrowed or scaled. The funding target fell 7% in verification, from $115,000 to $106,800, after one placement was found to serve a different neighbourhood.

EXECUTIVE SUMMARY — AT A GLANCE

40.73°N 73.98°W, United States of America · Natural Earth

- **The risk.** After Sandy, Stuy Town went about a week without power in dark, windowless hallways, and 15 Peter Cooper Village buildings lost services for months.
- **First action.** By 1 December, the Tenants Association, CERT, and Beam Living list everyone who cannot use stairs or relies on powered equipment, and plan door checks at 24 and 48 hours.
- **The money.** $49,800 / $106,800 / $153,800; the best dollar buys floor captains, door checks, and battery packs inside the complex.
- **Do not.** Do not heat with a gas oven, candles, or a kerosene heater; NYC had 273 serious fires in November 2012 against 200 a year earlier.*

WHERE THIS IS

SCOPE

The request gave a street address inside Stuyvesant Town. This briefing covers the complex as a whole: Stuyvesant Town (East 14th to East 20th Street, First Avenue to Avenue C) and Peter Cooper Village just north of it (East 20th to East 23rd Street), about 110 buildings and 11,000 apartments. It also covers the neighbouring NYCHA Riis and Wald Houses south of East 14th Street, which flooded and lost power in the same storm. The complex was built in 1945–47 on the old Gashouse District, on filled land along the former East River shoreline. **The address is in hurricane evacuation Zone 1**, the first zone the city evacuates (NYC Open Data, checked twice; some rental listings say Zone 3, which is wrong). Under the 2015 deal that kept about 5,000 apartments affordable for 20 years, the owner provides a social worker, wellness checks for older tenants, and a senior centre.

The season ahead: NOAA's Climate Prediction Center (8 October) puts the Niño-3.4 anomaly at +2.1 °C, with a better than 83% chance of a strong to very strong El Niño through early 2027. Strong El Niño winters here lean warm and wet, which means rain more often than snow, but not a quiet winter: the January 2016 record blizzard came in the last very strong El Niño. In front of the complex, the East Side Coastal Resiliency floodwall (East 15th to 25th Street, 12 movable gates) was finished in October 2024. The section to the south, from East 14th Street down through East River Park, is not due until late 2027.

WHAT THIS PLACE SHOULD DO

RANKED

Ranked by expected lives saved per unit of effort before the peak. Backing lenses are shown per action; an action several lenses reached

* Suggested formulation: check with a health worker before sharing.

independently is the stronger bet.

1. By 1 December, build a floor-by-floor list of residents who cannot manage stairs or depend on powered medical equipment, give each two named neighbours and a battery pack, register them with Con Ed, and knock on their doors 24 and 48 hours into an outage *

PARTIALLY CONFIRMED | EMERGENCY MANAGER · PUBLIC HEALTH · FRONTLINE · SKEPTIC · HISTORIAN · PHILANTHROPIST | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Beam Living (StuyTown management), with the Tenants Association and Manhattan 6 CERT; GOLES and tenant associations at Riis and Wald	1 Dec 2026	About $61,800 (kits, stipends, 40 packs; estimates)	Deaths at home in the days after the storm

The hallways in these towers are interior and windowless, so in a blackout they are pitch dark, and the elevators stop. The harm comes after the storm: the 2003 New York blackout raised non-accidental deaths by about 25% (95% CI 12–41%), about 90 excess deaths against an official count of 6 (Anderson and Bell, *Epidemiology* 2012). After Sandy, emergency visits for kidney disease among people 65 and over rose in the first week (rate ratio 1.44; Weinberger et al., *Am J Epidemiol* 2021). On the Lower East Side, 62% of residents surveyed got no relief from official sources (LES Ready, 2017). HHS emPOWER counts 312 Medicare beneficiaries who depend on electricity-powered equipment in ZIP 10009 (14 on oxygen) and 108 in 10010; both ZIPs also take in the East Village and Gramercy, so the complex's share is unknown. Start from the owner's existing wellness-check staff under the 2015 agreement, and get each person's consent. Con Ed Special Services (1-877-582-6633) registration gets a call in an outage, not priority restoration.

* Suggested formulation: check with a health worker before sharing.

Transferability: strong, the same buildings and the same storm. Battery packs (about 1 kWh, around $800 list) run a CPAP for a night or more but an oxygen concentrator for only 2–3 hours, so oxygen users need a supplier backup plan, not just a pack. A HEFPA medical certificate was dropped from this action: it stops shutoffs for non-payment, not storm outages.

2. Before any forecast major nor'easter, make sure every dialysis patient in the complex is booked for early dialysis and has transport arranged

PARTIALLY CONFIRMED | PUBLIC HEALTH | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Dialysis providers, with the Tenants Association and CERT checking transport	Plan by 30 Nov 2026; dialysis 24–48 hours before each forecast storm	Staff and volunteer time	Deaths from missed dialysis

This is the only action here with a measured effect on deaths. Among about 13,800 dialysis patients in New York and New Jersey, those dialysed early before Sandy had lower 30-day mortality (adjusted odds ratio 0.72, 95% CI 0.52–0.997) (Lurie et al., *Am J Kidney Dis* 2015). After Sandy, about a quarter of Manhattan patients missed a session, and the Manhattan VA's unit on East 23rd Street was closed for months (WNYC). Providers already must keep emergency plans; the community's part is making sure no patient is missed and that they can get there. The kidney-care emergency hotline (KCER) is 866-901-3773.*

Transferability: direct, the same storm and region. The effect is borderline (upper bound 0.997), so treat it as likely rather than certain. Which dialysis units sit inside 10009 and 10010 was not confirmed.

3. By 15 November, run and publish the yearly closure test of the 12 floodgates in front of the complex, and publish the storm plan for the unfinished section to the south

PARTIALLY CONFIRMED | EMERGENCY MANAGER · HISTORIAN · SKEPTIC | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
NYC DEP, with DDC and NYC Emergency Management	15 Nov 2026	Staff time	A finished wall left open, and water coming round the unfinished end

* Suggested formulation: check with a health worker before sharing.

The East Side Coastal Resiliency wall from East 15th to 25th Street covers the complex's river frontage, with 12 movable gates. DEP took over its operation in February 2025, and the city's agreement already requires a yearly closure test plus quarterly inspections; DDC ran overnight tests of several gates in February 2025. No published deployment time and no construction-period storm plan for the southern section (Montgomery Street to East 14th Street, now due in late 2027) were found; advocates asked for one in 2020. Publishing both costs nothing and tells residents whether the wall will be shut before the water arrives.

Transferability: direct. Whether water could reach East 14th Street around the open southern end is plausible but was not confirmed. Gate duties under the 2021 agreement may still sit partly with DOT and Parks.

4. By 1 December, the owner publishes, building by building, what has been raised or flood-proofed since Sandy and what backup power exists for elevators, water pumps, and hallway lights

PARTIALLY CONFIRMED | HISTORIAN · SKEPTIC · EMERGENCY MANAGER | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
Beam Living, for the owners (Blackstone and Ivanhoe Cambridge)	1 Dec 2026	Staff time	A repeat of the 2012 basement failures, unseen until the storm

In Sandy, salt water drowned basement electrical equipment; 15 of Peter Cooper Village's 21 buildings and 2 in Stuyvesant Town got rent rebates for lost services, and the Peter Cooper basements were still shut 11 months later. The owners claimed $95.3 million from their insurer. No published flood barrier, generator, battery, or microgrid work at the complex was found; its 3.8 MW of rooftop solar does not run elevators or pumps in a blackout. Next door, Con Ed raised its East 13th Street substation equipment and walled the site, and Bellevue and NYU Langone were evacuated because basement fuel pumps or generators failed. The lesson here is that equipment below grade fails.

* Suggested formulation: check with a health worker before sharing.

Transferability: direct. The owner may have done work that is simply unpublished; the action is disclosure first, then fixes.

5. By 30 November, NYCHA states whether the post-Sandy backup generators at Riis and Wald Houses work, load-tests them, and tells the tenant associations

PARTIALLY CONFIRMED | EMERGENCY MANAGER · PHILANTHROPIST | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
NYCHA	30 Nov 2026	Operating budget	Another two to three weeks without water or elevators

After Sandy, NYCHA took about 15–19 days to restore power, heat, and elevators to 402 buildings, and Riis residents drew water from a hydrant. FEMA money paid for full backup generators at Riis (a contract of about $71 million, due mid-2022) and standby generators at Wald. NYCHA's own 10-year report counted 189 generators installed but only 96 operational, and in December 2024 it told the Council 197 were still being installed. Whether Riis and Wald's are running now was not found.

Transferability: direct. If the generators work, part of action 1's battery money should move from Riis and Wald to the private towers.

6. When the Mayor orders a Zone 1 evacuation, ground-floor and basement residents leave and those who need help call 311; support frail upper-floor tenants in place. Sign people up for Notify NYC door to door now

PARTIALLY CONFIRMED | EMERGENCY MANAGER · PUBLIC HEALTH · SKEPTIC · FRONTLINE | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
NYC Emergency Management, with GOLES, the Tenants Association, and CERT	Sign-ups by 15 Dec 2026; moves on each order	Volunteer time	Drowning at home; deaths from late forced moves

Of New York's Sandy drownings, about half were at home, and 18 of 20 home drownings in the state were in the lowest evacuation zone (CDC MMWR 2013). The city's Homebound Evacuation Operation (call 311) runs only after a mayoral evacuation order, roughly 48 to 6 hours before landfall, and nor'easters rarely trigger one. So the standing rule for ground-floor and basement residents is: on a coastal flood

* Suggested formulation: check with a health worker before sharing.

warning, go up to a neighbour. Moving frail people late is itself dangerous: evacuated nursing-home residents' 90-day mortality nearly doubled, from 2.7% to 5.3% (Dosa et al., *JAMDA* 2012). Notify NYC sends alerts in 13 languages plus ASL, including Spanish and Chinese; sign-ups at Riis and Wald work best done by people residents already know.*

Transferability: the drowning evidence is from this city and storm; the nursing-home evidence is from Gulf Coast nursing homes and transfers only loosely to high-rise tenants.

7. Before the first storm, check that every apartment's carbon monoxide alarm works, and tell residents never to heat with the oven, candles, or a kerosene or propane heater

CONFIRMED | PUBLIC HEALTH · SKEPTIC | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
FDNY, with Beam Living and NYCHA	15 Dec 2026	Owners' existing duty	Carbon monoxide poisoning and fires during outages

New York City has required owners to install a CO alarm within 15 feet of every bedroom since 2004 (Local Law 7), so no money is needed; the gap is dead batteries and the message. In the month after Sandy the FDNY logged 273 serious fires against 200 a year earlier, blamed on candles, generators, electrical faults, and stoves left on when the power returned. Poison centres in New York reported 80 CO exposures in the first week after landfall (CDC MMWR). Kerosene and propane space heaters are illegal in New York City homes.*

Transferability: direct, same city and storm.

8. By November, refer homebound residents found by the floor lists to NYC Aging for home-delivered meals, and stage water in the lobbies for stair-carry volunteers before a forecast storm

PARTIALLY CONFIRMED | FOOD SUPPLY CHAIN · PHILANTHROPIST · FRONTLINE | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
NYC Aging and Citymeals on Wheels, with the Tenants Association and CERT	Referrals by 30 Nov 2026; water on each forecast	$15,000 for about 375 extra boxes	Days without food or water above the 6th floor

* Suggested formulation: check with a health worker before sharing.

El Niño barely touches food supply here: USDA forecasts food-at-home prices up 2.4% in 2026 and 1.8% in 2027 (September 2026). The chain breaks at the last mile. In Sandy, shops below about 39th Street traded cash-only in the dark, delivery stopped, and Henry Street's Meals on Wheels drivers carried food up dark stairwells. Citymeals already sends its clients winter emergency boxes of four shelf-stable meals (about $10 a meal); in Sandy it sent 21,565 extra boxes. People who are not yet clients enter through NYC Aging (212-AGING-NYC), with an intake and a home visit, so refer them now.

Transferability: direct. Keep a small cash float at home: card readers and ATMs failed in 2012.

9. At Riis and Wald, check SNAP households for exemptions from the new work rules, and teach the 10-day rule for replacing food lost in an outage

PARTIALLY CONFIRMED | ECONOMIST · FOOD SUPPLY CHAIN | ADAPTATION INVENTORY: NOT CONSULTED

OWNER	BY WHEN	COST	PREVENTS
HRA, with GOLES	15 Nov 2026, then through March	Staff time	Lost benefits stacked on a storm

SNAP work rules now apply to adults 18 to 64 without a child under 14, enforced since 1 March 2026; people 65 and over are exempt. After an outage, report food lost within 10 days, then file form LDSS-2291 within 10 days of that report (OTDA). The Lower East Side's food insecurity rate is 17.9% against 15.4% citywide (NYC Food Policy Center); Stuy Town itself sits in Community District 6, where hardship is lower. Regular HEAP energy grants open 2 November, but where heat is included in the rent, as here, the benefit is small (about $21–50).

Transferability: direct. Federal LIHEAP funding for 2027 is proposed for elimination again, so HEAP may not reopen next year.

* Suggested formulation: check with a health worker before sharing.

WHO DOES WHAT

RACI CHART

R = Responsible (does the work) · **A** = Accountable (one per action; signs off and answers for it) · **C** = Consulted (asked before) · **I** = Informed (told after). Built from the owners named in the verified actions. No one here has been contacted or has agreed to a role; every row is a proposal.

Action	Beam Living	Tenants Assoc	Manhattan 6 CERT	NYC Emergency Mgmt	DEP	DDC	NYCHA	GOLES and Riis/Wald TAs	Dialysis providers	FDNY	NYC Aging and Citymeals	HRA
1. Floor lists, batteries, and door checks	**A**	**R**	**R**	**C**			**C**	**R**			**I**	
2. Early dialysis and transport		**R**	**R**	**I**					**A/R**			
3. Floodgate test and southern storm plan	**I**	**I**		**R**	**A/R**	**R**						
4. Below-grade and backup power disclosure	**A/R**	**C**										
5. Riis and Wald generators				**I**			**A/R**	**I**				
6. Evacuation rule and alert sign-ups	**C**	**R**	**R**	**A**				**R**				
7. CO alarms and heating message	**R**	**I**					**R**			**A**		
8. Meal referrals and lobby water	**C**	**R**	**R**								**A/R**	
9. SNAP exemptions and food replacement								**R**			**C**	**A/R**

What the chart shows: the Tenants Association and CERT do the work on five rows each and are accountable for none, so most of this plan rests on volunteers. Beam Living is accountable for the two rows that matter most inside the complex (1 and 4). Rows 3, 4, and 5 need a public answer, not money.

WHERE MONEY DOES THE MOST

FUNDING

The Philanthropist lens, reconciled against the ranked actions and verified. Placements are ranked by marginal lives saved per dollar. The envelope is bounded by what this place can spend before the peak, not by what it needs.

FLOOR	TARGET	CEILING	LARGEST UNCERTAINTY
$49,800	$106,800	$153,800	How many of the 312 emPOWER residents in 10009 live in the complex, and whether the Riis and Wald generators work

Floor: GOLES sign-ups ($30,000) + floor-captain kits for about 110 buildings at about $180 each ($19,800) = $49,800. Target: the full Stuy Town placement ($19,800 kits + $10,000 checker stipends + 40 battery packs at about $800 = $61,800) + GOLES ($30,000) + Citymeals ($15,000) = $106,800. Ceiling: target + 40 more packs ($32,000) + $15,000 for Henry Street, only if it confirms it serves homebound residents at Riis and Wald = $153,800. Unit prices are estimates or list prices, not quotes. The target fell 7% in verification: the Henry Street and

* Suggested formulation: check with a health worker before sharing.

Educational Alliance placement was dropped from the target because neither serves Stuy Town, and the owner already pays for a social worker and wellness checks there.

RECIPIENT	USE	AMOUNT	MECHANISM	BASIS	VERDICT
StuyTown-PCV Tenants Association, through a fiscal sponsor still to be named	Floor captains, checker stipends, and battery packs (action 1)	$61,800 ($19,800 at the floor)	Direct grant	About $180 a building for kits and about $800 a pack, both estimates. The Association is a 501(c)(4) with about $85,000 a year in revenue, so it needs a sponsor before money moves.	PARTIALLY CONFIRMED
GOLES (Good Old Lower East Side)	Door-to-door Con Ed, Notify NYC, and benefits sign-ups at Riis and Wald (actions 1, 6, 9)	$30,000	Unrestricted grant	About three organiser stipends for 10 weeks, estimated. After Sandy, LES Ready reached more than 15,000 households with nearly 3,000 volunteers.	PARTIALLY CONFIRMED
Citymeals on Wheels	About 375 extra emergency boxes for newly referred homebound residents (action 8)	$15,000	Restricted gift	About $10 a meal, four meals a box (Citymeals). Only through NYC Aging intake.	PARTIALLY CONFIRMED
Henry Street Settlement	Homebound checks at Riis and Wald, if it serves them	$0 ($15,000 at the ceiling)	Direct grant	Its older-adult programme is at Vladeck Houses, not here; Educational Alliance's is at Co-op Village.	CONTRAINDICATED AS SCOPED

The funder's one thing: billions in Sandy money went into the public housing and the floodwall, but nothing found went into keeping Stuyvesant Town's 11,000 private apartments livable in a blackout. Put the first dollar where the public dollar did not go: the list and the knock on the door, inside the complex.

* Suggested formulation: check with a health worker before sharing.

Do not do this

CONTRAINDICATED · ADVICE THAT WOULD COST LIVES HERE

Advice that circulates for this hazard and would cost lives here.

Do not heat with a gas oven or stove, candles, or a kerosene or propane heater, and never run a generator indoors *

CONTRAINDICATED PARTIALLY CONFIRMED

In November 2012 the FDNY logged 273 serious fires against 200 a year earlier, blamed on candles, generators, electrical faults, and stoves. Poison centres in New York reported 80 carbon monoxide exposures in the first week after landfall. Kerosene and propane space heaters are illegal in New York City homes.

Instead: battery lanterns, layered clothing and blankets, a working CO alarm, and a move to a warm neighbour's or a warming centre if the cold gets dangerous.

Do not count on the floodwall unless its gates are shut, and do not count on the southern section at all this winter

CONTRAINDICATED CONFIRMED

The wall in front of the complex (East 15th to 25th Street) has 12 movable gates that must be closed before a storm. The section south of East 14th Street, through East River Park, has slipped to late 2027.

* Suggested formulation: check with a health worker before sharing.

Instead: plan as if 2012 could recur: a week without power, elevators, or water pressure. Ask the city when the gates will be shut (action 3).

Do not plan on Bellevue being your backup for oxygen, dialysis, or a power failure

CONTRAINDICATED PARTIALLY CONFIRMED

In Sandy, Bellevue evacuated about 700 patients after its basement fuel pumps flooded; its $90 million floodwall was still under way in 2025. NYU Langone evacuated about 300 patients when its generators failed; it has since built a perimeter wall and a separate energy building. The Manhattan VA was evacuated before landfall.

Instead: agree a backup oxygen supplier and dialysis unit outside the flood zone now, with transport (action 2).*

Do not stay in a basement, or drive the FDR, when a flash-flood or coastal flood warning is out

CONTRAINDICATED CONFIRMED

In the December 1992 nor'easter the FDR went under water and divers rescued trapped drivers. In Ida (September 2021), 11 of New York City's 13 deaths were in basement apartments.

Instead: go up, not out. Clear basement laundry rooms, storage, and garages when a warning is issued.

Do not read a warm, wet El Niño forecast as a quiet winter

CONTRAINDICATED PARTIALLY CONFIRMED

The January 2016 blizzard dropped 26.8–27.5 inches on Central Park, a record, in the last very strong El Niño (ONI +2.5). Three people in New York State died shovelling.

Instead: prepare for rain, surge, and outages, and for one big storm, snow or not. People with heart disease should not shovel heavy snow.

* Suggested formulation: check with a health worker before sharing.

YEAR	EVENT	TOLL	WHAT CHANGED AFTER
Sep 1821 (before records)	Hurricane; the East River rose about 13 ft, and it struck at low tide	Not found	Nothing
Dec 1992 (neutral)	Nor'easter: storm tide about 8–10 ft at the Battery; FDR flooded, subway shut	NYC deaths not confirmed; divers rescued drivers on the FDR	No hardening
Aug 2003 (neutral)	Citywide blackout	Officially 6; about 90 excess deaths (Anderson and Bell 2012)	Nothing found
Oct 2012 (neutral)	Sandy: Con Ed's East 13th Street substation floods; about 220,000 customers dark below about 36th Street	43–44 NYC deaths; Stuy Town without power about a week; Peter Cooper services out for months; Bellevue and NYU evacuated	Con Ed's $1 billion hardening, $180 million at East 13th Street; the ESCR floodwall
Jan 2016 (very strong El Niño)	Blizzard Jonas: 26.8–27.5 in at Central Park	NYC-only toll not confirmed; 3 shovelling deaths in New York State	Nothing found
Sep 2021 (La Niña)	Ida cloudburst	13 NYC deaths, 11 in basement apartments	Basement flood alerts
Sep 2023 (strong El Niño)	Record rain: over 8.5 in at JFK in a day	No deaths found	Emergencies declared
Oct 2024	ESCR wall from East 15th to 25th Street completed	—	Southern section now due late 2027
Jan–Feb 2026 (weak La Niña)	Cold snap	22 deaths under Medical Examiner investigation, 7 of them at home	Nothing found

* Suggested formulation: check with a health worker before sharing.

The recurrence nobody has noticed: the water comes back to the filled shoreline, and each time it disables something below grade. That was the FDR and the subway in 1992; in 2012 it was the substation, the hospital fuel pumps, and the Peter Cooper basements; in 2021 it was Ida's basement apartments. Sandy is not the worst case here: the 1821 hurricane brought a comparable surge at low tide.

WHERE THE EXPERTS DISAGREE — UNRESOLVED

- **Get people out before the surge** versus **support them in place**. The Emergency Manager confirmed the address is in Zone 1 and wants ground floors and basements cleared. The Public Health Scientist warns that forced moves of frail older people raise mortality, and the Skeptic notes that most Zone A residents ignored the 2012 order and that the city's homebound evacuation runs only on a mayoral order. The briefing does both: low floors move up or out; upper floors are supported where they are (actions 1 and 6).
- **Insure the risk** versus **fund the people at risk**. The Economist found renters' policies exclude flood and looked for a parametric product; New York's 2023 parametric flood pilot was a one-year policy that covered rain flooding in other boroughs and was not renewed. That proposal was dropped, and the money here goes to people, not property.

WHAT NOBODY COVERED — BLIND SPOT

No lens found what the owner has actually done to the complex's basements and backup power since 2012; that one disclosure (action 4) could change the size of every other action. Second, cold: a winter blackout in these towers stops the heat too, and no study of indoor cold during a New York outage was found; the 2026 cold snap killed 7 people at home. Third, no one could say which dialysis units serve the complex, or how many of the 312 power-dependent Medicare beneficiaries in ZIP 10009 live inside it.

HOW TO READ THIS — METHOD

The panel is author-built. Eight simulated expert lenses were used to generate these recommendations. Where they agree, that is a strong hypothesis, not a consensus of the field. Every recommendation was then independently checked for evidence, transferability to this location, and feasibility before the peak; the verdict tags carry the result.

Mortality figures are resolved at Climate Impact Lab impact-region scale, roughly 300,000 people. They are not neighbourhood figures. The El Niño projection covers *heat only*; drought, flood, fire, smoke, and crop failure are additional to it and are carried here by the historical record rather than by a published number.

* Suggested formulation: check with a health worker before sharing.

- **Scope.** The request gave a street address inside Stuyvesant Town. It was widened to the complex (Stuyvesant Town and Peter Cooper Village) and the neighbouring Riis and Wald Houses, which share its flood and outage footprint. Climate Impact Lab impact region, as the report records it: a New York County region, not resolved. Mortality figures exist only at that scale (impact regions average roughly 300,000 people); sub-city detail is used for hazard exposure and action design, not for death counts.
- **Exposure.** Climate Impact Lab, *451,000 at Risk* (September 2026, pre-peer-review): ECMWF SEAS5 seasonal forecasts (51-member ensemble) applied to temperature–mortality relationships across 24,378 regions, against a 1996–2025 baseline, for June 2026 – February 2027. It covers heat only. It is never added to the Impact Map's long-run projections or quoted from the map's GDP-denominated mortality. Where heat is not the dominant hazard, the historical record carries the hazard instead of a borrowed number.
- **Expert panel.** Eight simulated expert lenses (emergency manager, public health scientist, frontline responder, skeptic, economist, historian, philanthropist, and food supply chain analyst) each researched this place independently and in parallel, from web sources, to a fixed brief. They were given the Hoboken briefing of 19 October as regional context, with its claims treated as claims; its food-price figures turned out to be from an older USDA release and were replaced.
- **Reconciliation.** Duplicate actions were merged and backing lenses recorded. Convergence was tested for shared bias (whether the evidence behind an agreed action came from a setting like this one) before it counted in an action's favour. Contradictions were kept, not resolved by dropping a side. Actions were ranked by expected lives saved per unit of effort before the peak, each was given a named payer and trigger or marked unfunded, and the funding placements were reconciled against the ranked list.
- **Verification.** Six verifier agents checked every recommendation on three tests: evidence (the primary source and its effect size), transferability (whether that evidence came from somewhere like here), and feasibility (whether it can be done here before the peak). Financial actions were also checked for availability in this jurisdiction, a named payer, a trigger threshold, and whether they already exist: this removed the HEFPA certificate from action 1 and dropped the parametric flood pilot, which was not renewed. Food actions were checked for whether each indicator is published at a usable frequency (Con Ed's outage map reports by borough, not ZIP). The funding envelope was checked for real recipients, published unit costs, and duplication, then re-summed; one placement was found to serve another neighbourhood. The historical record was checked event by event, with the ENSO phase taken from NOAA's ONI series. One claimed death (an oxygen user on Second Avenue in Sandy) could not be traced to its source and was removed.
- **Who does what.** The RACI chart is built from the owners named in the verified actions, with one accountable party per action. It is a proposal: no organisation named in it has been contacted or has agreed to a role.

* Suggested formulation: check with a health worker before sharing.

- **Verdicts.** *Confirmed*: evidence, transferability, and feasibility all hold. *Partially confirmed*: holds after the corrections shown. *Unverified*: could not be checked to a primary source. *Contraindicated*: would do harm or waste the window here.
- **Adaptation Inventory.** Not consulted this run: the inventory renders empty without its interface, and its download sits behind a registration form that was not filled in on anyone's behalf. No action here carries a checked precedent from it.
- **Health wording.** Passages where a wording error could hurt someone (indoor heating and fire, medical equipment in an outage, dialysis, evacuation, and CO alarms) are marked "* Suggested formulation: check with a health worker before sharing." They were checked against published sources, not by a health professional. They are suggestions, not medical advice, and anyone passing them on should confirm them with a doctor, pharmacist, nurse, or community health worker first. The marker was added on 2 November 2026.
- **Rules.** No cost is derived by dividing a published total, and no local figure is invented; where data is thin, the report says so and shows the containing geography's number with its arithmetic. Every source is listed below with its verification status.
- **Limits.** The panel and verifiers are AI research agents working from web-available sources, not human experts, and no one in this place was interviewed. The impact region was not resolved. The owner's post-Sandy work, the current state of the Riis and Wald generators, the deployment time of the floodgates, and the dialysis units serving the complex were not found. CPC's official winter outlook for the Northeast could not be retrieved. All unit prices in the funding section are estimates or list prices.
